Relief for Norway, Inc., American, an American corporation, founded on Apr. 19, 1940, and directed by Americans for the sole purpose of alleviating distress in Norway. President: Dr. J. A. Aagaard. Headquarters: 135 South La Salle Street, Chicago. Member of National War Fund, Inc. American Relief for Norway has collected \$2,415,750 from the date of its founding to Oct. 9, 1944.

Religious Education, International Council of, founded in 1922 to promote Sunday School work, to encourage the study of the Bible, and to assist in the spread of the Christian religion. Membership: 40 Protestant denominations, 31 state councils of churches and religious education, and 142 city and Provincial councils. President: Harold E. Stassen. General Secretary: Roy G. Ross. Headquarters: 203 N. Wabash Ave., Chicago 1, Illinois. The annual meeting is scheduled for Feb. 10-16, 1946, in Columbus, Ohio.

Rescue and Relief Committee, Inc., International, founded in February, 1942, by a merger of the Emergency Rescue Committee with the International Relief Association, and dedicated to the rescue and relief of anti-fascist refugees in Europe. Membership: over 5,000. Chairman: L. Hollingsworth Wood. Executive Secretary: Sheba Strunsky. Headquarters: 103 Park Avenue, New York, N. Y. Offices in Paris, Rome, Geneva, Stockholm, Istanbul and Mexico City. Meetings are held bi-monthly or as necessary.

Research Council, National, founded in 1916 to "promote research in the mathematical, physical, and biological sciences, and in the application of these sciences to engineering, agriculture, medicine, and other useful arts, with the object of increasing knowledge, of strengthening the national defense, and of contributing in other ways to the public welfare." Membership: about 220, composed in majority of representatives of 85 scientific and technical societies; in addition to about 1,800 members of committees of the Council and its Divisions. Chairman: Ross G. Harrison. Executive Secretary: George B. Darling. Headquarters: 2101 Constitution Avenue, Washington 25, D.C. The Council conducts a wide range of research activities in the medical and natural sciences under the sponsorship or supervision of specially appointed committees. Series of post-doctorate fellowships are administered in the medical and in the natural sciences. A number of publications resulting from work of the Council's Committees are issued each year, either commercially or in the *Bulletin* or *Reprint* and *Circular Series* of the Council. As an operating agency of the National Academy of Sciences, the Council is called upon frequently by agencies of the Government for advice and assistance in connection with many problems of research relating to the war effort. See PHYSICS.

Research Council of Canada, National, founded in 1916 to have charge of all matters affecting scientific and industrial research in Canada which may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. Membership: 15. President: C. J. Mackenzie. Secretary: S. P. Eagleson. Headquarters: National Research Building, Ottawa, Canada. The Council's staff of 1,379 at September 30, 1945, including those employed in several laboratory units operated outside of Ottawa, was grouped in laboratory divisions of applied biology, chemistry, mechanical engineering, physics and electrical engineering, a section on research plans and publications and a scientific library and technical information service. Restoration of peace has required

orientation of research towards reconstruction and the application of new knowledge to civilian industrial enterprise. Outside activities included: a research program of more than 70 projects in universities; the granting of 87 scholarships for postgraduate research in 1945-46; and the award of 22 grants in aid to responsible workers for special investigations. Additional grants were made through various Committees of Council, notably for medical research in different hospital centers.

Review of Motion Pictures, Inc., National Board of, an organization founded in 1909 to encourage the best uses of the motion picture recreationally, educationally, and artistically. Membership: 500. President: Quincey Howe. Executive Director: James Shelley Hamilton. Headquarters: 70 Fifth Avenue, New York City.

Rotary International is the world-wide organization of all Rotary Clubs. It is responsible for the administrative supervision of its member Clubs and for the propagation of the Objects of Rotary throughout the world. A Rotary Club is a group of representative men, one from each business or profession in a community, who meet together in fellowship to further the "Ideal of Service," which is thoughtfulness and helpfulness to others in business and community life.

There are now 5,547 Rotary Clubs in more than 60 countries of the world with a membership in excess of 253,000. President: T. A. Warren, Wolverhampton, England. Secretary: Philip Lovejoy, Chicago, Illinois. Headquarters: Chicago, Illinois, with additional offices in London, England; Zurich, Switzerland; and Bombay, India. The official Rotary magazine is *The Rotarian*, which has a Spanish edition, *Revista Rotaria*. There are also numerous regional Rotary magazines published throughout the world in several different languages.

During 1945, Rotary activities included general community-betterment undertakings, work for crippled children and underprivileged children, the establishment and supervision of camps and clubs for boys and girls, assistance to students through scholarships and student loan funds, the promotion of high standards in businesses and professions, and the development of international good will and understanding. In addition, Rotary Clubs actively cooperated with their governments in rationing, salvaging, and fund-raising campaigns, and in all phases of civilian defense, and engaged in activities for the alleviation of war suffering. They also gave special emphasis to the economic and social readjustment of demobilized service men and women and unemployed war workers.

To assist in developing an informed public opinion on vital problems confronting the world, Rotary International provided Rotary Clubs with background information on the Bretton Woods, Dumbarton Oaks and San Francisco Conferences. At the United Nations Conference in San Francisco, 49 Rotarians were in attendance as delegates, advisers, or consultants. To promote understanding of the United Nations Charter, Rotary International published a comprehensive 96-page booklet—*From Here On!*—which contained the complete text of the Charter, together with annotations and challenging questions for the assistance of Rotary Clubs in preparing programs on this subject. The week of November 11-17, 1945, was designated as "United Nations Charter Week" in Rotary, and Rotary Clubs throughout the world devoted their programs that week to a study of the Charter.

The 36th annual convention of Rotary International was held in Chicago, Illinois, in June, 1945. With the conclusion of the war, Rotary Clubs were reorganized, in 1945, in the following countries and regions formerly occupied by the Axis powers, Belgium, France, Norway, the Mariana Islands, The Netherlands, and The Philippines.

Royal Institution of Great Britain, founded in 1799 for the promotion, diffusion, and extension of science and useful knowledge. Membership: about 800. President: The Right Hon. Lord Rayleigh. F.R.S. Secretary A. O. Ranking. F.R.S. Headquarters: 21 Albemarle Street, London, W.1.

Russian Relief, Inc., American Society for, formerly Russian War Relief, Inc., founded in September, 1941, to furnish relief aid to the Soviet people, collect and ship medical supplies, clothing, food, household items and crop seeds to the U.S.S.R. Membership: 40 Board of Directors. President: Edward C. Carter. Honorary Chairman: Allen Wardwell. Secretary: William W. Lancaster. Headquarters: 5 Cedar Street (P.O. Box 185, Wall Street Station), New York City 5. The American Society for Russian Relief, Inc., functions under the President's War Relief Control Board No. 547.

Safety Council, National, founded in 1913 to bring about understanding of the steps necessary to prevent accidents of all kinds and to furnish its members with printed material and information for use in conducting accident prevention work. Membership: 7,234, mainly companies and associations. President: Ned H. Dearborn. Headquarters: 20 N. Wacker Drive, Chicago 6, Ill. Regional Offices: Central, 20 N. Wacker Drive, Chicago 6, Ill.; Eastern, 800 Chrysler Bldg., New York 17, N. Y.; Western, 111 Sutter St., San Francisco 4, Calif.; Southern, 14 Peachtree St., Atlanta 3, Ga.; Washington, 1001 15th St., N.W., Washington 5, D. C. On Sept. 8, 1945, President

Truman called upon the National Safety Council to mobilize safety forces of the nation for a postwar safety campaign against accidents of all kinds. To cooperate in this campaign, the Council has called together national associations and has intensified its own activities in traffic and industrial safety. Special publications, films, and posters were produced and special studies made on several aspects of traffic and industrial safety as they are affected by and as they affect the postwar period. The Council published eight magazines and hundreds of studies on accident prevention methods. It distributed over thirteen million safety posters in 1945 for use in industry, in schools, and public places. It conducted many national safety contests among various groups and issued hundreds of awards. The 1945 National Safety Congress was cancelled due to wartime meeting and travel restrictions. The Congress normally conducted in October attracts more than 10,000 delegates who are representative of every phase of the safety movement in all parts of the country. See ACCIDENTS.

Save the Children Federation, Inc., founded in 1932 as an organization for rural community child service in America and cooperation overseas with Save the Children International Union and affiliates. Chairman: Guy Emery Shipley. President and Executive Director: John R. Voris. Vice President: William N. Haskell. Treasurer: John Q. Tilson. Secretary: A. Broderick Cohen. During 1945 domestic activities were centered in disadvantaged rural areas, operating through 93 county committees to aid especially the children of 670 rural "Sponsored Schools." The overseas postwar program includes a school sponsorship plan in France, Holland, Belgium, Norway and an individual child sponsorship plan in all above mentioned countries plus plan for refugee children sheltered in Sweden. In the United States the Children's Clothing Crusade in the public schools has for its annual goal a minimum of 2,000,000 pounds of clothing. Other needed gifts in kind such as foods and school supplies are secured. The total disbursements—cash and commodities—for the ten months ended October 31, 1945, were \$1,820,142.50.

Savings and Loan League, United States, a trade organization founded in 1892 by the savings, building and loan associations and cooperative banks of the United States, whose assets total \$8,000,000,000 and whose chief business is the lending of money to finance home ownership. Membership: 3,640 associations and 47 affiliated State Leagues. President: Henry P. Irr. Executive Vice President: Morton Bodfish. Headquarters: 221 North LaSalle Street, Chicago. The organization took the lead in 1945 in implementing the home loan provisions of the Servicemen's Readjustment Act so that 85 per cent of the home loans guaranteed for veterans were made by these institutions. Estimated volume for the first year was 50,000 to 60,000. The League instituted a quarterly statistical report on the veterans loans made by member institutions, and collaborated with the American Legion in developing improvements in the machinery for this specialized type of home lending. The League published the 15th of its series of year books, *Savings and Loan Annals, 1944* and consolidated the two savings and loan publications, *Savings and Loans* and *American Savings and Loan News*.

Sculpture Society, National, organized in 1893 to advance the knowledge, creation, and appreciation of good sculpture. The Society cooperates in planning competitions and administers a trust fund which provides loans for sculptors in need. Membership: about 300. President: Donald DeLue. Secretary: Eleanor M. Mellon. Headquarters: 1083 Fifth Avenue, New York. The Lindsay Morris Memorial Prize for 1945 was awarded to Jean deMarco. A competition for sketches for a statue for Our Lady of Victory Church was held. The three prize winners—Miss Mary Lawser, Carl L. Schmitz and Henry Kreis. During the year the Society circulated several exhibitions of enlarged photographs of sculpture, throughout the United States: American Patriots in Sculpture, Ecclesiastical Sculpture, Garden Sculpture and General Sculpture and also two exhibitions in reduced size of American Patriots in Sculpture and Ecclesiastical Sculpture. Mr. John J. Cunningham, Jr. was appointed Educational Director.

Seeing Eye, Inc., The, a philanthropic association founded in 1929 for the purpose of supplying blind persons with dogs trained to act as guides; training and teaching instructors in the science and technique of educating dogs as guides; and educating and training blind persons in the proper use and handling of these dogs. The association trains 150 students annually. 1,200 Seeing Eye dogs have now been placed with blind men and women who came to the school to learn to use them. President: Henry A. Colgate. Headquarters: Morristown, New Jersey. The Seeing Eye, Inc., is supported by annual memberships and contributions. The maximum cost to a civilian blind person is \$150, although the actual cost to The Seeing Eye is many times that amount. Seeing Eye dogs are now supplied without cost to eligible members of the armed forces who have lost their sight in the line of duty.

Small Business Men's Association, Inc., National, founded November, 1937, as a nonpartisan, nonprofit organization to give small business men an effective voice in national

affairs, to protect and advance the American system of free, private enterprise under the Constitution, and to promote the general welfare by collecting and distributing information and data affecting the financial, commercial, civic, and industrial interests of its members and the nation. President: DeWitt Emery. Secretary: James S. Westbrook. Headquarters: 163 North Union Street, Akron, Ohio.

Social Hygiene Association, American, formed in 1914 to combat syphilis and gonorrhea, to fight prostitution and other unwholesome conditions, to promote sound sex education and training for marriage and parenthood, and to protect and improve the American family as the basic social institution. As a participating service of the National War Fund, the Association's major resources were devoted during the war to helping maintain the lowest possible venereal disease rates, to protecting industrial workers and members of the armed forces from prostitution and related conditions and to mitigating the deleterious effects of war on young people. Membership: 150 organizations, approximately 18,000 individuals. President: Dr. Ray Lyman Wilbur. Executive Director: Dr. Walter Clarke. Headquarters: 1790 Broadway, New York 19, New York. Services include advice and consultation; surveys, production, and distribution of literature, films, and other materials. National Social Hygiene Day sponsored annually is marked by more than 5,000 meetings throughout the country. The William Freeman Snow medal for distinguished service in the social hygiene field is presented to an outstanding person each year on the occasion of the Association's Annual Meeting in New York City.

Social Science Research Council, a corporation organized in 1923 to promote the development of the social sciences. Membership: 21 directors elected or appointed by seven national social science societies, 9 directors-at-large elected by the board of directors; all former directors, numbering 66 in 1945, retain membership in the corporation. Chairman: E. W. Burgess. Secretary: Shepard B. Clough. Treasurer: Shelby M. Harrison. Executive Director: Donald Young. Headquarters: 230 Park Avenue, New York 17. During 1944-45 nine committees were engaged in planning and promotion of research; 23 grants-in-aid of research and 61 fellowships were awarded.

Social Work, National Conference of, founded in 1873 to facilitate discussion of the problems and methods of practical human improvement, to increase the efficiency of organizations devoted to this cause, and to disseminate information. Membership: 6,000. President: Kenneth L. M. Pray. General Secretary: Howard R. Knight. Headquarters: 82 N. High Street, Columbus 15, Ohio.

Social Workers, American Association of, founded in 1921 to formulate and establish standards of personnel and of conditions under which social work is practiced, to seek to establish satisfactory conditions for the organization and administration of social services, to encourage through its membership requirements proper and adequate basic preparation and training for social work practice, to disseminate information concerning the profession, and to conduct investigations which contribute to an understanding of social welfare needs. Membership: 10,500. President: Mrs. Irene Farnham Conrad. Executive Secretary: Joseph P. Anderson. Headquarters: 180 East 22 Street, New York City 10.

Sociological Society, The American, founded in 1905 to encourage sociological research, discussion, teaching, and publication. Membership: 1,300. President: Carl C. Taylor. Secretary: Conrad Taeuber. Headquarters: U.S. Department of Agriculture, Washington 25, D. C. The Society issues the bi-monthly journal, the *American Sociological Review*.

Special Libraries Association, founded in 1909 as an international organization of librarians and information experts who serve manufacturing concerns, banks, corporations, law firms, newspapers, advertising and insurance agencies, transportation companies, research organizations, museums, hospitals, business branches and other departments of public and university libraries, government bureaus, associations, and other organizations in the fields of business, medicine, the sciences, technology, social welfare, and the arts. Membership: 8,836. President: Herman Henke. Secretary: Kathleen B. Stebbins. Headquarters: 81 East 10th Street, New York 9, N. Y. Publications: *Special Libraries*, published monthly from September to April, with bi-monthly issues from May to August; sponsored periodical, *Technical Book Review Index*, issued ten times a year, September to June. *Special Library Resources*, vol. 1, was published in 1941, with three additional volumes planned for 1946 publication. Other recent publications are: *War Subject Headings for Information Files*; *Handbook of Commercial, Financial and Information Services*; *Source List of Selected Labor Statistics*; *A List of Subject Headings for Chemistry Libraries*, and *Classification and Cataloging of Maps and Atlases*. An annual convention is held each year, usually in June. The 1946 Convention is scheduled for Chicago, Illinois.

Standards Association, American, a federation of national groups dealing with standardization, founded in 1916. Membership: 68 trade associations, technical socie-

ties, and government departments and some 2,000 industrial concerns, who hold membership directly or by group arrangement. President: Henry B. Bryana. Secretary: P. G. Agnew. Headquarters: 70 East 45th Street, New York 17, N. Y. The number of standards approved by the Association emergency procedure for American War Standards, greatly increased during 1945. The A.S.A., in addition to its regular peacetime work, approved 151 war standards. All aim ultimately at developing greater national efficiency. See PHOTOGRAPHY.

State Governments, The Council of, a joint governmental agency established in 1925 by the states to serve as a clearinghouse of information for public officials and legislators, to encourage cooperation among the states and between the states and the Federal Government, and to make state government more effective. President: Gov. Edward Martin; Executive Director: Frank Bane. Headquarters: 1813 East 60th Street, Chicago 37. The Council has cooperated with Federal and State governments in resolving many problems of a war and postwar nature including civilian defense, rationing, transportation, finance and intergovernmental fiscal relations, crime control, juvenile delinquency, interstate trade barriers, public welfare, conservation of natural resources, postwar reconstruction and development, unemployment compensation, education, and others. The Council is also the secretariat of the Governors' Conference, the American Legislators' Association, the National Association of Attorneys General, the National Association of Secretaries of State and the National Association of State Budget Officers. Membership, 48 states. See STATE LEGISLATION.

Statistical Association, American, founded in 1839 as a scientific and educational organization of persons seriously interested in the application of statistical methods to practical problems, the development of more useful methods, and the improvement of basic statistical data. Membership, 8,500. President: Isador Lubin. Secretary: Lester S. Kellogg. Headquarters: 1603 K Street, N.W., Washington 6, D.C.

Statistical Institute, Inter American, founded May 12, 1940, to foster statistical development in the Western Hemisphere. Individual members: Constituent, 77; ex officio, 24; institutional members. Adhering governments, 17 (Argentina, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Mexico, Panama, Peru, United States, Venezuela); affiliated organizations, 2; special affiliates, 4. President of the Bureau (Executive Committee): M. A. Teixeira de Freitas, Rio de Janeiro. Headquarters of Permanent Office: Washington, D.C. There are five standing committees—on current publications, Inter-American statistical yearbook, statistical education, demographic statistics, and projects review, respectively. Principal activities are: (a) quarterly journal; (b) yearbook, (c) maintenance of statistical source files and issuance of bibliographical materials; (d) maintenance of biographical information on statistical persons in the Western Hemisphere; (e) maintenance of a microfilm exchange service on statistical materials; (f) technical program in subject matter fields. Technical work is carried on principally by statisticians loaned by their governments to the IASI for periods of one year each. The quarterly professional journal, *Estadística*, 11 numbers of which had appeared up to November 30, 1945, is published in Mexico. Detailed plans for an inter-American statistical yearbook have been completed, the final volume to be issued early in 1947; existing national income estimates for the Latin American nations have been studied and evaluated, a survey of the methods used in the last population census of each American nation has been completed and published, and preliminary plans developed for a continental population census in 1950 with minimum standards; a survey of methods used in agricultural production statistics has been made (now in preparation for final publication); an International Foreign Trade Classification scheme has been adapted to American trade purposes. Surveys have been launched but are still incomplete in (a) industrial production statistics, (b) statistical training methods, and (c) vital statistics methods and procedures. A second edition of the Directory of Statistical Personnel in the American Nations was released in the spring of 1944. The preliminary edition of a *Bibliography of Selected Statistical Sources in the Western Hemisphere* has recently been published and is currently being examined by a group of specialists prior to the issuance of a definitive edition for sale.

Sunday-School Union, American, (founded in 1817 and renamed in 1824) "to establish and maintain Sunday-Schools and to publish and circulate moral and religious publications." Thirty-six laymen constitute the Board of Managers. President: Belding B. Sifer, Secretary and Treasurer: John H. Talley. Headquarters: 1816 Chestnut Street, Philadelphia 3, Pa. More than 160 Missionaries serving non-denominational, Union Sunday-Schools where there is no other established evangelical, Christian work; also holding Bible conferences and Daily Vacation Bible Schools in their Districts.

Surgeons, American College of, founded by surgeons of the United States and Canada in 1913 to advance the science and the ethical and competent practice of surgery,

to establish hospital standards, to engage in research, to aid in better instruction of doctors, to formulate standards of medicine, and to improve all adverse conditions surrounding the ill and injured wherever found. Membership: 13,500. President: W. Edward Gallie. Chairman of the Board of Regents: Irvin Abell. Headquarters: 40 East Erie Street, Chicago. Twenty-one sectional war sessions were held in 1944. Regional and national meetings were cancelled in 1945. Regional meetings are scheduled in 12 cities in January, February and March, 1946, and a Clinical Congress for November, 1946.

Swedish Historical Museum, American, established in 1926, owned and operated by the American Swedish Historical Foundation. Its purpose is to preserve the history and the culture of Americans of Swedish ancestry, as well as their contributions to American life, and as such it is the outstanding repository in the United States. Its annual program includes current exhibitions, lectures, receptions to distinguished guests, and two festive occasions: the Lucia celebration and the Spring Fete. The Museum is also custodian of one of Philadelphia's oldest houses—"The House on Queen Christina's Land-Grant." Headquarters, 19th Street and Pattison Avenue, Philadelphia 45, Pennsylvania. Membership, 2,000. Officers: Emil Tyden, President. William L. Batt, Henry Ericsson, Samuel P. Wetherill, Carl R. Chindblom, Vice-Presidents. Ormond Rambo, Jr., Vice-President and Treasurer. Axel Johan Upvall and Adolph B. Benson, Recording and Corresponding Secretaries. Maurice A. Hogeland, Assistant Treasurer. Miss Elizabeth S. Swenson, Executive Secretary.

Tax Association, National, founded in 1907 to promote the discussion and dissemination of educational and scientific information on tax questions. Membership, 1,500. President: Dixwell L. Pierce. Secretary: Raymond E. Manning. Headquarters: % Library of Congress, Washington, D.C.

Tax Foundation, Inc., founded in 1938 to administer funds for the furtherance of science in taxation, efficiency in public administration, and economy in public finance, to collect data, make studies, conduct surveys, research projects, and demonstrations, to publish periodicals and issue other literature; and to further public understanding germane to these premises. Chairman: William B. Warner. Executive Director: Charles O. Bauer. Headquarters: Room 1420, 30 Rockefeller Plaza, New York City 20.

Tax Institute, Inc., founded in December, 1932, to serve as a national citizen's bureau of tax information. Membership, 1,100. President: Mark Eisner. Executive Director: Mabel L. Walker. Headquarters: 150 Nassau Street, New York 7, N. Y. During 1945 the following publications were issued: monthly issues of *Tax Policy*, semi-monthly issues of *Taxes for Democracy*, and quarterly *Tax Institute Bookshelf*.

Testing Materials, American Society for, a technical Society founded in 1898 to promote knowledge of the materials of engineering and to standardize specifications and methods of testing. Membership: 5,700. President: J. R. Townsend. Executive Secretary: C. L. Warwick. Headquarters, 260 S. Broad Street, Philadelphia 2, Pa. During 1945 the Society continued its extensive standardization and research in the field of engineering materials and issued numerous emergency specifications and emergency alternate provisions in existing standards to expedite the procurement of materials and to conserve strategic materials. The 1945 Annual Meeting (48th) was held in New York, N. Y., June 27. The 1946 Spring Meeting and Committee week will be held in Pittsburgh, February 25 to March 1.

Textile Foundation, The, an organization founded in 1930 to do scientific and economic research for the benefit of the textile industry. Chairman of Board of Directors: Franklin W. Hobbs. Secretary: Edward T. Pickard. Headquarters: Industrial Building, National Bureau of Standards, Washington, D. C. Fundamental research laboratories are at Princeton, N. J. Publication office is at Kent, Conn.

Theater Wing War Service, Inc., American, founded as a nonprofit war service organization to further the war effort of the United Nations. It represents the entire entertainment world, including stage, screen, radio, vaudeville, music, and all the allied crafts. Membership: about 50,000. President: Rachel Crothers. Chairman of the Board and Secretary: Antoinette Perry. Headquarters: 730 Fifth Avenue, New York 10, N. Y.

By the end of the year the famous Stage Door Canteens of the American Theatre Wing in the United States were closed, or scheduled for closing. Last to shut its doors was the Washington canteen (January 23, 1946). The London Stage Door Canteen remained the outpost—to serve men still overseas.

Other hospitality centers, like the Club for Merchant Seamen with its Ticket Committee and subsidiary services of sketching by famous illustrators, language lessons, Ship's Libraries and the rest, shut down by the end of November. And the Servicewomen's Tea Dances, which had been given every Sunday in the Hotel Roosevelt Grill, ended shortly before Christmas.

The accent of the Wing's interest shifted to Hospitals,

where experimental work had been carried on for more than two years in close cooperation with the medical and military authorities and the Red Cross. The character of the Wing's hospital activity had been different from any other then in operation. Instead of carrying entertainment directly to the base hospitals of the area, the Wing had worked to develop types of entertainment designed for hospitals. These included special party-evenings, novelty evenings, programs of sports, radio techniques, motion picture tests, etc., and ward entertainment which included important singers, cartoonists, magicians, expert instruction in hobbies and a wide variety of entertainment in, and out of, the theater, proper.

This work, at the end of 1945, was expanded to include all theater activity operating in hospitals including United Theatrical War Activities programs. All others were brought under the Wing to be redesigned for special hospital shows. This included tabloid versions of current musical shows and also vaudeville. It is the plan of the Wing to continue the Hospital activities for many years. (Another distinctive characteristic of the Wing's hospital program was its policy of 'No publicity'.) In the expansion, branches of the Wing which had operated canteens in other cities undertook to set up Hospital Committees coordinated with the main one in New York. Most notable of these were in Cleveland and Boston.

The Cape Cod Branch of the American Theatre Wing continued its service of supplying homely necessities to outposts in New England but, during the year, this branch extended its hospital service and, through a special campaign over the radio and through the theater, managed to provide portable radios for all ward cars in all hospital trains operating in the United States in addition to providing large numbers of console radios for base hospitals in the Northeastern area. In addition, it conducted a campaign to provide musical instruments for various units of the Army, Navy, Amphibious Forces.

The Workroom, by the end of the year, finished off clothing drives for Europe, the Greek actors and actresses, Army and Navy Relief, a special Philippine Relief drive and limited its activities to work for the hospitals.

The Speakers' Bureau and Victory Players keynoted the last War Bond drive with speakers and special sketches widely used by the Treasury Department and, after that, centered its activities upon the educational campaign for the Returning Veteran.

By the end of the year a special committee from the Board of the Wing was studying a plan for giving counsel or retraining to servicemen within the entertainment industry, hopeful of reinstating themselves in their profession. This was a development—in reverse—of the War Production Training Committee, which had undertaken to convert theater skills into war production.

Town Hall, Inc., founded in 1894 to establish a nonpartisan, nonsectarian educational institution for the advancement and study of science, the arts, social, political and industrial problems, and to aid in the development of good citizenship and sound municipal government. Membership: 2,500. President: George V. Denny, Jr.; Educational Director: Paul H. Sheats; Administrative Assistant to the President, Orville Hitchcock; Vice President-Comptroller, William Steinhoff; Secretary: Gaylord Davis. Headquarters: The Town Hall, 123 West 43rd Street, New York City. Outstanding events during 1945-46, fifty-first season, included a series of morning lectures Mondays, Wednesdays, and Saturdays from November through March; a series of Town Hall Workshops and Short Courses; a broadcast of "America's Town Meeting of the Air" each Thursday evening over the American Broadcasting Company network.

Trade Association Executives, American, formed in 1920 as a means to establish a better and wider public understanding of the purposes and functions of responsible trade associations, the professional standards of service and conduct which they maintain, and character of service rendered; and provides a common ground where men and women representing trade associations may pool their interests and share in the interchange of information and opinion. Membership, nearly 900. President: Richard P. White, Executive Secretary: Ruth I. Mulroy. Headquarters: 1427 Eye Street, N.W., Washington, D. C. The Annual Meeting for 1945 was held at the Hotel Stevens, Chicago, Illinois, November 15, 16, and 17th, 1945.

Transportation Association of America, founded in April, 1935, to carry out research and education in matters pertaining to transportation, dedicated to the preservation of private ownership and to the formulation and effectuation of a sound national transportation policy. President: Sydney Anderson; Secretary: E. O. Krogh. Headquarters: 105 West Adams Street, Chicago 3.

Travelers Aid Association, National, an organization founded in 1917 to promote throughout the country means of cooperation and to improve the standards of Travelers Aid Service, to study the causes of migration, and to encourage a public understanding of moving people. Travelers Aid Service includes individualized information, travel and short contact service to travelers and other persons in difficulty away from their homes. Membership: operating members—98 Travelers Aid Societies

providing Travelers Aid services in 427 communities; cooperating members—850 organizations and individuals on call for Travelers Aid service in 1,123 places where no regular Travelers Aid Society exists; associate members—individuals and organizations interested in supporting Travelers Aid services. President: Randall J. LeBoeuf, Jr. Secretary: Eleanor D. Gillespie. Headquarters: 425 Fourth Avenue, New York 16, N.Y. A biennial convention is scheduled to be held in 1946. During 1945, as a member agency of the United Service Organizations, Inc., the National Travelers Aid Association operated for the use of members of the armed forces and war production workers: 146 USO Travelers Aid Service Units serving 256 communities and 165 Troops in Transit Lounges.

Tuberculosis Association, National, founded in 1904 for the study and prevention of tuberculosis. Membership: approximately 8,000. President: Will Ross. Secretary: Dr. Charles J. Hatfield. Headquarters: 1790 Broadway, New York City 19. In 1945 the Trudeau Medal was awarded to Dr. Florence R. Sabin. Because of travel restrictions, no annual meeting was held in 1945.

United China Relief, Inc., organized in February, 1941, to raise funds for relief and rehabilitation in China, and also to promote understanding and cooperation between the peoples of America and China. Honorary Chairman: Paul G. Hoffman. Chairman: Charles Edison. Vice Chairman: Eugene E. Barnett, and George Whitney. President: James L. McConaughy. Vice-Presidents: Dwight W. Edwards, and B. A. Garside. Treasurer: James G. Blaine. Secretary: B. A. Garside. Headquarters: 1790 Broadway, New York City 19. United China Relief is a coordination of the activities of nine Participating and Affiliated Agencies which by further amalgamations have now been reduced to six as follows: American Bureau for Medical Aid to China, American Friends Service Committee; Associated Boards for Christian Colleges in China, China Aid Council; Church Committee for China Relief; and Indusco (American Committee in Aid of Chinese Industrial Cooperatives). United China Relief is a member agency of the National War Fund, Inc.

United Nations, Inc., American Association for the, formerly the League of Nations Association, founded in 1923 to teach the need for the cooperation of all nations in building an international organization as the essential basis of peace, now exclusively devoted to studies and popular education activities on the United Nations. Membership, 10,000. President: Dr. William Emerson. Director: Clark M. Eichelberger. Headquarters: 45 East 65th Street, New York 21, N.Y. Research affiliate: The Commission to Study the Organization of Peace. The Association and the Commission publish expert reports and popular material in connection with a three-fold program of education: (1) on the United Nations and its specialized agencies, (2) on American foreign policy to make effective United States membership in the United Nations; (3) on necessary revision of UNO and its agencies to meet the changing needs of a changing world. The Twentieth Annual National High School Contest on the organization of peace will be held April 12, 1946. Services national and local groups with speakers, recordings, program and teaching aids, press and feature material. Monthly magazine, *Changing World*.

United Seamen's Service, Inc., founded Sept. 1, 1942, to provide for merchant seamen rest centers, residential and recreation clubs, personal service, and any other aids necessary to the health, morale, and general welfare of officers and men of the merchant marine both in the United States and abroad. Chm. of the Bd.: Admiral Emory S. Land, Pres. William S. Newell. Secy: Miss Clara A. Kaiser; Exec. Dir: Douglas P. Falconer. Headquarters: 89 Broadway, New York City 6. On Oct. 1, 1945, USS was operating in 21 ports in the United States and 38 overseas. In these ports it had 118 different facilities consisting of residential and recreational clubs, personal service offices, port medical offices and rest centers for seamen needing care after hospitalization or the tension of wartime sea duty. As war fronts advanced during 1945, centers were opened in Germany, Japan, and China to give services to seamen carrying supplies to fighting armies and occupation troops. The annual meeting of the board will be held in New York City, Apr. 2, 1946.

University Professors, American Association of, a professional organization of college and university teachers and investigators, founded in 1915 to facilitate more effective cooperation among the members of the profession, to promote the interests of higher education and research, and to increase the usefulness and advance the standards and ideals of the profession. The nature of its work is indicated by the titles of the committees, which include Academic Freedom and Tenure, Freedom of Speech, International Relations, Educational Standards, Author-Publisher Contracts, Professional Ethics, Relation of Junior Colleges to Higher Education, Cooperation with Latin American Universities, Pensions and Insurance, Preparation and Qualification of Teachers, Encouragement of University Research, Library Service, Place and Function of Faculties in College and University Government, and the Economic Welfare of the Profession. Membership:

about 18,000. President: Quincy Wright. General Secretary: Ralph E. Himstead. Headquarters: 1155 Sixteenth Street, N.W., Washington 6, D.C.

University Women, American Association of, founded in 1882 for practical work in education, especially the raising of standards in higher education for women. Membership: over 80,000, organized in State divisions and in 920 local branches. President: Dr. Helen C. White. General Director: Dr. Kathryn McHale. Headquarters: 1634 I Street, N.W., Washington 6, D.C. The Headquarters staff and national committees, comprised of experts in their fields, give leadership in developing a program of study and appropriate action which is carried out by local, state, and national units. The program is directed toward these general objectives: development of democratic education; international cooperation to bring about a peaceful world society; solution of economic and social problems to promote the welfare of all; enlargement of opportunities for women and full use of their abilities; development of the arts. The Association gives fellowships, international and national, for women. As a member of the International Federation of University Women, it is active in various projects for better understanding and friendship among university women of the world.

Urban League, National, an interracial organization, founded in 1910, which works to improve living conditions among Negroes in urban communities throughout the United States; the League operates through local affiliates in 53 key industrial centers which have interracial boards and committees staffed by professional trained workers. Membership, about 20,000. President, William H. Baldwin; Executive Secretary, Lester B. Granger; General Secretary, Eugene Kinckle Jones. Headquarters: 1188 Broadway, New York 10, N.Y. During 1945 through V-J Day, the League continued its program of emphasizing the policy of wider and fairer use of Negro manpower in the armed forces and industry to aid in the war effort. After V-J Day, the League placed its emphasis on the continued employment of Negroes on the basis of skills acquired and potential in reconversion. Awarded two fellowships making four maintained for school year 1945-46—3 in social work and 1 in Vocational Guidance and Personnel Administration. The League publishes *Opportunity*, *Journal of Negro Life*, and occasional papers on problems of racial contact. The 1946 Annual Meeting to be held in New York February 18th.

Veterans of Foreign Wars of the United States, The first postwar "United Nations Veterans Victory Conference" highlighted the 46th National Encampment, Veterans of Foreign Wars of the United States, Chicago, October 1-2-3-4. Representatives of 22 countries, mainly combat veterans of World War II, were brought to Chicago from all parts of the world as guests of the Veterans of Foreign Wars for a two-day meeting which may pave the way for international cooperation, among veterans of the United Nations, for the preservation of world peace. Although the conference was planned and sponsored by the Veterans of Foreign Wars, it was recognized by the State Department with the presence of an official representative in behalf of Secretary of State James Byrnes. He was Ambassador Boas Long, former Minister to Guatemala. Messages endorsing the purposes of the conference were received from President Harry S. Truman, Prime Minister Attlee of Great Britain and Generalissimo Chiang Kai-shek of China.

The delegates adopted resolutions in which they pledged themselves to call upon the veterans of their respective countries to help mobilize public opinion in support of the objectives of the United Nations Charter. They also voted to establish an information center in Washington, D.C. which will serve as a clearinghouse for communications between the veterans of the United Nations. They further recommended that the use of the atomic bomb be placed at the disposal of the Security Commission of the United Nations.

The delegates to the V.F.W. 46th National Encampment endorsed peacetime compulsory military training; advocated government control of the atomic power research; urged the establishment of an independent agency for foreign intelligence and espionage; reiterated endorsement of the United States participation in an international association of nations to prevent future wars; urged prompt return of enemy prisoners of war and temporary alien war refugees to their homeland.

On internal affairs, the V.F.W. urged Congress to seek a high level of full employment through use of the free enterprise system and incentive taxation, rather than by government guarantee of jobs and spending. The construction of self-liquidating super highways was urged.

On veteran welfare, the V.F.W. reaffirmed its recommendation that the Government should grant adjusted service pay to all World War II veterans, in recognition of the basic fact that an estimated eight million World War II veterans will not benefit by the G.I. Bill of Rights. Congress was also urged to liberalize existing provisions of the G. I. Bill, particularly those dealing with the loan clause and educational aid. Early and orderly demobilization of the Armed Forces, with preference and priority based on length and type of service, was also urged.

The annual Reports of Officers spotlighted the growth of the organization since Pearl Harbor. In 1941, the membership strength of the V.F.W. was less than one-quarter million. This year the membership exceeds one million, which includes approximately 750,000 World War II veterans. The total number of local units reached 4,500 in 1946, a new high in V.F.W. history. In the past 12 months 900 new Posts were chartered. The expansion program of the organization has a total of 12,000 Posts for its goal by the close of 1946.

Veterinary Medical Association, American, founded in 1863 to promote veterinary science and its proper application. Membership: 9,000. President: James Farquharson. Secretary: J. G. Hardenbergh. Headquarters: 600 South Michigan Ave., Chicago 5, Ill. The International Veterinary Congress prize for distinguished service to the veterinary profession was awarded in 1945 to Dr. L. A. Merrill, 600 S. Michigan Ave., Chicago 5, Ill. The Borden Award for 1945 for outstanding research contributing to the control of dairy-cattle disease was awarded to Dr. W. L. Boyd, University Farm, St. Paul 8, Minn. The Humane Act Award for 1945 was awarded to Tim Suter of Pittsburgh, Pennsylvania. The 1945 meeting was held in Chicago.

Vocational Association, Inc., American, founded in 1925 with the conviction that occupational education is a primary right and privilege of every citizen. Membership: 25,000. President: M. D. Mobley. Executive Secretary: L. H. Dennis. Headquarters: 1010 Vermont Avenue, N. W., Washington 5, D. C.

Vocational Guidance Association, Inc., National, founded in 1913 to unite persons engaged or interested in any phase of vocational guidance and occupational adjustment. Membership: 4,000. President: M. R. Trabue. Executive Secretary: Christine Melcher. Headquarters: 82 Beaver Street, New York 5, N. Y. Official journal *Occupations*, the Vocational Guidance Journal, published monthly October through May. The organization functions through 75 branches, in 37 States, 2 territories, and Canada; national committees specializing in various phases of vocational guidance; regional conferences. Current activities are concerned with school-work programs, plans for postwar occupational adjustment and rehabilitation, and cooperation in promoting vocational guidance in Latin America.

Weights and Measures, American Institute of, founded in 1916 to defend the English system of weights and measures against pro-metric propaganda and to be educational in respect of the use of weights and measures. President: W. R. Ingalls. Secretary: Robert F. Cogswell. Headquarters: 33 Rector Street, New York City.

Wildlife Institute, American, an educational and scientific organization incorporated in 1935 for the conservation and restoration of North American wildlife. President: Frederic C. Walcott. Secretary: O. R. Gutermuth. Headquarters: 822 Investment Building, Washington, 5 D. C. The Institute participates in 12 cooperative game management, wildlife research projects in the several states, Canada and Mexico. It sponsors the annual North American Wildlife Conferences and publishes the Transactions of meetings conducted at the Conferences. The Institute publishes books on wildlife subjects and assists in the publication of bulletins, booklets and leaflets relating to the conservation or wise use of natural resources. It promotes conservation, education, and research through the issuance of college fellowships and grants in aid, and advances conservation education by disseminating practical literature and press releases designed to encourage proper use of limited resources and restoration of renewal assets.

Women's Association, American, founded in 1922 to provide for women engaged in commercial and professional pursuits, facilities for business and social contacts, and opportunities for recreation, mental stimulus, and physical betterment; to advance the economic, cultural, and social interests of women in their chosen fields of endeavor; and to maintain in the City of New York and elsewhere a clubhouse or other club quarters. Membership: 600. Pres. Natalie W. Linderholm, Sec. Elizabeth Kelley. Headquarters: The Barclay, 111 East 48 Street, New York City 17. Events of 1945 included the annual Association meeting in April, and Association meetings in Feb., Sept., and Dec. At the 19th Annual Friendship Reunion Dinner in November the Annual AWA Award for eminent achievement was presented to Pauline E. Mandigo. Recognition as AWA Woman-of-the-Month was accorded Jane H. Todd in September, Anne Morgan in October, Dr. Barbara B. Stimson in November and Pauline E. Mandigo in December. The winner of the Anna W. Porter Memorial Award was Maude K. Wetmore.

Women's Christian Temperance Union, National (WCTU) founded in 1874 to unite Christian women of the United States for the education of public sentiment in favor of total abstinence from the use of all alcoholic liquors, and to train youth in habits of sobriety. Membership: about 400,000. President: Mrs. D. Leigh Colvin. Secretary: Miss Lily Grace Matheson. Headquarters: 1780 Chicago Avenue, Evanston, Illinois. To develop a working personnel, an organization training school is held yearly at Headquarters, Evanston, Ill. To train teachers to super-

vise narcotics education in schools, a three months' winter seminar is held in Evanston and summer credit courses in various colleges as well as courses at Evanston and Chautauqua are given. A round table for graduates is held at Headquarters at Christmas time. Increased gifts and purchases brought the collection in the Frances Willard Library up to 8,800 volumes and a similar number of pamphlets and manuscripts, making it the largest alcohol reference library in the world now open to scholars and specialists in this field. Children's and youth's activities were strengthened through accelerated programs of the Loyal Temperance Legion and the Youth Temperance Council. The slogan adopted for 1946 is "Unite all the family for temperance."

Women Artists, Inc., National Association of, founded in 1889 to exhibit and display works of art by contemporary artists. Membership: 800. President: Mrs. Arthur Ellis Hamm. Executive Secretary: Josephine Droege. Headquarters: the Argent Galleries, which the Association maintains, 42 West 57 Street, New York City. The Association sponsors an Annual Exhibition, at which a number of prizes are awarded, general exhibitions, rotary shows, a sketch class, lectures, etc. The annual open meeting is held at the headquarters the second Wednesday in April.

Women's Clubs, General Federation of, founded in 1890 to unite the women's clubs and like organizations throughout the world for the purpose of mutual benefit, and for the promotion of their common interest in education, philanthropy, public welfare, moral values, civics and fine arts. Membership: 2,500,000 women in 16,500 clubs. President: Mrs. LaFell Dickinson. Headquarters: 1734 N Street, N.W., Washington, D.C. In April, 1944, a nation-wide "Youth Conservation" program was launched aimed at an integration of effort on the part of all national, State, and local agencies interested in the youth field. Mrs. LaFell Dickinson represented the General Federation at the San Francisco Conference on International organization as Consultant to the United States Delegation. Major legislative efforts were directed toward securing renewal of the Trade Agreements Act and ratification of the United Nations Charter. The Federation's special bond selling campaign resulted in war bond sales by clubwomen totaling \$154,459,132. Other activities included war service, recruitment for the Women's Land Army and participation in the United National Clothing drives and the Victory Loan drive.

Women Voters, National League of, established in 1920 to promote political education through active participation of citizens in government. Membership: 35 affiliated State Leagues and over 550 local Leagues. President: Miss Anna Lord Strauss. Secretary: Mrs. Daniel E. Earley. Headquarters: 726 Jackson Place, Washington 6, D. C.

World Alliance for International Friendship through the Churches, founded in 1914 to promote international goodwill and peace. Membership: about 1,000. President: Rt. Rev. G. Ashton Oldham. General Secretary: Henry A. Atkinson. Headquarters: 70 Fifth Avenue, New York 11, N. Y. The organization publishes a monthly *News Letter*; *Pattern for Peace—Catholic, Jewish and Protestant Declaration on World Peace, Crossroads of Conflict, World Alliance Purpose and Program*. Broadcast Series: *The Resources of Religion in World Organization, Educating for World Order, Palestine in War and Peace*.

World Calendar Association, Inc., founded in 1930 to study the defects of the present calendar and to educate the public on the benefits of calendar revision and the advantages that would result from adoption of The World Calendar, a perpetual stabilized balanced calendar, always the same, of 12 months with increased emphasis on the division of the year into four equal quarters. President: Elisabeth Achelis; Vice President: Charles S. McVeigh; Secretary-Treasurer: Harriet Lillie; and Director: Westy Egmont. International Headquarters: International Building, 630 Fifth Avenue, New York City 20. The World Calendar Association publishes the *Journal of Calendar Reform*, a quarterly periodical, of which Westy Egmont is the Editor. The World Calendar has been approved by 14 nations, many organizations and distinguished scientists, scholars, economists, businessmen, religious leaders, and government officials.

World Peace Foundation, established in 1910 to promote international order and peace through publications, study groups, and a reference service. President: George H. Blakeslee. Director: Leland M. Goodrich. Headquarters: 40 Mt. Vernon Street, Boston 8, Mass. The Foundation published in 1945: Volume VI of *Documents on American Foreign Relations*, Edited by Leland M. Goodrich and Marie J. Carroll; *The Netherlands and the United States*, by Dr. Bernard H. M. Vlekke; *Bretton Woods: Clues to a Monetary Mystery*, by Carlyle Morgan; *World Policing and the Constitution: An Inquiry into the Powers of the President and Congress, Nine Wars and a Hundred Military Operations, 1789-1945*, by James Grafton Rogers; and *The United Nations in the Making: Basic Documents*. The following titles are scheduled for 1946: Volume VII of *Documents on American Foreign Relations*, Edited by Leland M. Goodrich and Marie J. Carroll; Volume II of *War and Peace Aims of the United Nations*, Edited by Louise W. Holborn; *United Nations Economic and Social*

Council, by Dr. Herman Finer; *Our Peace with Japan*, by Frans H. Michael; and *The Charter of the United Nations: Documents and Commentary*, by Leland M. Goodrich and Edward Hambro.

Young Men's Christian Associations, The National Council of (Y.M.C.A.), formed as a national committee in 1866. The first local organization was formed in London in 1844 (in the United States in 1851) for the physical, mental, social, moral and religious education of youth. Membership, 1,295,393 in 1,267 local Associations. President: Howard A. Coffin. General Secretary: Eugene E. Barnett. Headquarters: 347 Madison Avenue, New York City. Major emphasis in 1945 included continued service to young men in military and related defense service as one of six agencies composing the United Service Organizations, with responsibility for operating 510 clubs and centers, in addition to expanding regular facilities everywhere. Also conducted service to prisoners of war in 33 countries at a cost of over \$9,000,000 through World's Alliance. The North American Y.M.C.A.'s have continued for fifty-six years a program of international cooperation in thirty-two countries. With the end of the war the Association continues the policies of assisting youth and adults to play their part as Christians in the struggle for freedom and a world of justice, peace and order; sharing with churches, educational and government agencies in creating a public opinion that will assure acceptance by Americans of their responsibilities in the world order; and joining with other Christian movements in education and motivation of youth for the practice of democracy at home as between groups based on race, color, religion, or economic distinctions. All Associations are reorganizing their young adult programs emphasizing personal, educational and vocational counseling, special training classes and schools, social and recreational groups, dormitory facilities. Programs for children and adolescents in Y.M.C.A.-sponsored school and neighborhood groups are expanding. Student Associations are rebuilding their campus programs. Increased emphasis at all age levels is placed on co-ed activities and priority is given to public affairs and citizenship education.

Young Women's Christian Associations of the United States of America (Y.W.C.A.), established in 1906 to advance the physical, social, intellectual, moral and spiritual interests of young women. Membership: about 600,000. President: Mrs. Henry A. Ingraham. General Secretary: Mrs. Harrison S. Elliott. Headquarters: 600 Lexington Avenue, New York City. In 1945 the Y.W.C.A. in the United States served nearly 3,000,000 women and girls by providing through its 1,516 local centers, housing, food service, educational and recreational activities, and other services specially designed to help them meet changing conditions. In lieu of a national convention in 1945, local Y.W.C.A.'s held simultaneous meetings in the spring to consider the issues before the organization. Out of these meetings came program directives for the future. Special war projects carried by the Y.W.C.A. were continued in 1945. With the end of the war, the need for the services provided by the World Emergency and War Victims Fund of the Y.W.C.A. in the countries of Europe was greater rather than less. Relief and rehabilitation of homeless and displaced persons was carried on through this fund, and it also assisted in the reestablishing of Y.W.C.A.'s and in recruiting and training Christian leadership to carry on postwar work. In the United States, the closing of many USO clubs operated by the Y.W.C.A. during the war period, has made it necessary for the National Board of the Y.W.C.A. to expand its work and to organize new Y.W.C.A.'s to meet the needs of communities desiring a continuing service similar to that provided by the USO. As a member agency of American War-Community Services, the Y.W.C.A. was active also in helping women and girls meet the special problems affecting them in this reconversion period.

Youth Hostels, Inc., American, founded in 1934 to help all, especially young people, to greater knowledge, understanding, and love of the world by providing for them Youth Hostels (inexpensive overnight accommodations) in America and by assisting them in their travels both here and abroad over bike trails, foot paths, and highways. Membership over 115,000 to date. Honorary Presidents: Gifford Pinchot and Dr. Mary E. Woolley. President, Julien Cornell; National Directors, Isabel and Monroe Smith. Headquarters, Northfield, Massachusetts. In 1945, 225 hostels were chartered in 27 States.

Youth Problems, Committee on, appointed by the American Council on Education in 1942 to implement the findings of the American Youth Commission, and to form a rallying point for the many and worthy organizations carrying on youth programs, both governmental and non-governmental. Chairman: Henry I. Harriman. Secretary: Francis J. Brown. Headquarters: 744 Jackson Place, Washington, D. C. The original American Youth Commission was set up in 1935 by the American Council on Education with funds granted by the General Education Board, to study and evaluate factors relating to the care and education of American youth. With publication of its final report, *Youth and the Future*, in January, 1942, the work of the Commission was completed, and with its disappearance it was apparent that there was no one

group left in the field whose interest was not centered upon some one segment of the youth population of the nation. For this reason the Committee on Youth Problems was founded. Publications: *Color, Class, and Personality; Youth and the Future; Working with Rural Youth; Youth in the CCC; Barriers to Youth Employment*; and 20 other titles.

Zionist Organization of America, founded in 1897 to enlist public support for the reconstitution of Palestine as a Jewish Commonwealth and to foster a program of Jewish cultural renaissance. Membership: 160,000 exclusive of membership of affiliated and constituent organizations. President: Dr. Abba Hillel Silver. Executive Director: Dr. Sidney Marks. Headquarters: 1720 16th Street, N.W. Washington, 9, D.C. The destruction of European Jewish communities placed upon the American Zionist Organization the major responsibility for continuing the upbuilding of the Holyland. To this end the organization carries on a public relations and educational program designed to acquaint the American public with the achievements of the Jewish community of Palestine and with the historic claims of the Jewish people to its ancestral homeland. The 48th annual convention was held in Atlantic City, N.J., on November 16th-20th, 1945.

Zonta International, a classified service club of executive business and professional women, organized in Buffalo, N.Y., in 1919. There are 155 clubs in Canada, Denmark, Hawaii, Iceland, Sweden, and the United States with approximately 5,200 members. Main objectives are community service; encouragement of high ethical standards in business and the professions; improvement of the legal, political, economic, and professional status of women; and the advancement of international understanding, good will, and peace through a world fellowship of executive women. Zonta's chief service is work with women and girls and includes: youth centers; nursery schools; cooperation with juvenile authorities; health and social welfare programs; improved facilities for women and girls; encouragement to older business women; work with the blind; and scholarships and loan funds for students. The Amelia Earhart Scholarship, in honor of the U.S. aviatrix and Zontian, is awarded annually to a young woman qualified for graduate study in aeronautics. Zonta was one of the sponsoring organizations of the United Women's Conference at San Francisco, May, 1945. A valuable 1945 contribution to world peace was the international radio program entitled "Women United for Peace," which brought on the air outstanding women of four countries. Kerstin Hesselgren, first woman member of Sweden's Riksdag; Senator Thelma Moore Akana of Hawaii; Zonta's president, Jessie Ekman, of Canada; and Zonta's executive secretary, Harriet Richards, of the U.S. Headquarters: 59 E. Van Buren St., Chicago 5, Ill. Mrs. Lucile D. Edgar is editor of *The Zontian*, official publication.

SOIL CONSERVATION SERVICE. An agency of the U.S. Department of Agriculture, established in 1935. The Service promotes soil and water conservation, better soil utilization, and erosion control in agriculture, by supplying technical material and equipment to soil conservation districts organized under State laws and operated under local farmer direction. It also supervises the work programs of Civilian Public Service camps assigned to soil conservation activity. As of July 15, 1945, 1,355 soil conservation districts had been organized, including approximately 747,391,590 acres and roughly 3,454,069 farms. Under the guidance of the Service, drainage operations are performed on lands which thus can be made suitable for sustained production, and technical assistance is afforded to irrigation enterprises.

In cooperation with other agencies, the Service undertakes studies of the country's watersheds, preliminary to possible flood control operations on agricultural land. Agricultural lands which are submarginal or not primarily suitable for cultivation, are purchased by the Service and improved and managed to bring about needed land-use adjustments. Purchases aggregate over 11,200,000 acres. Of this, the Service manages 7,100,000 acres.

The Service undertakes water-resources studies to determine the feasibility of proposed flood-control, multiple-purpose, and agricultural water projects, and makes the data pertaining to them available to other agencies and enterprises for the correlation of water projects of mutual and public interest. Chief: Hugh H. Bennett.

SOLID FUELS ADMINISTRATION FOR WAR. An Agency established in the Department of the Interior by executive order on Apr. 19, 1943, which absorbed the preceding Office of Solid Fuels Coordinator for War. It centralizes government policies and activities pertaining to bituminous and anthracite coals and certain other solid fuels, utilizing the other agencies of the Department of the Interior in discharging its functions. The Administrator, who is the Secretary of the Interior, issues policy and operating directives to units of the solid fuels industries, recommends to the WPB any necessary program for wartime distribution or materials needed, and advises with the OPA on rationing and price adjustments, requests action from the War Manpower Commission when labor shortages threaten necessary wartime production, etc.

SOMALILAND. This lowland region lying east and south of the Abyssinian Plateau in the Horn of Africa is not a political unit, but is divided under French, British, Italian and Ethiopian sovereignty. Its area exceeds 375,000 square miles, with a population of more than 2,500,000. The region, despite its political fragmentation, has a geographic, ethnic and cultural unity. Its inhabitants are the Somali people who live a largely nomadic and pastoral life in a semi-desertic environment. Of Hamitic origin, they have a common language and are Moslems. There is no appreciable nationalist sentiment among them now, but their common background may give rise to one in the future.

French Somaliland. This is the smallest of the four parts of the region: 9,071 sq. mi. Its importance is due to its location near the southern end of the Red Sea, where it functions as a French counterpart to Aden. The capital, Jibuti, also serves as the maritime terminus of the railroad to Addis Ababa, through which is channeled much of the foreign trade of the Ethiopian highland. This transit trade was valued at 400,000,000 francs in 1943. In 1938 steam merchant vessels numbering 643 and displacing 2,823,096 tons stopped at Jibuti, nearly half of them being Italian and most of the remainder French. Otherwise the colony has little importance, salt being the only product of value (51,223 metric tons were exported in 1943). The census of 1944 disclosed a population of over 400,000, divided as follows: 14,056 Somali, 3,392 Arabs, 21,546 Danakil, and less than a thousand Europeans. Only the southern part of the colony thus falls within Somaliland properly so-called. It is administered by a Governor, with the assistance of an Administrative Council.

The British Somaliland Protectorate. This region has an area of 58,000 square miles and contains anywhere from one-half to three-quarters of a million Somali, largely nomadic. One of its principal economic functions has been to supply Aden with food supplies. Strategically it helps protect the short route to India. The Protectorate was overrun by Italian forces in August, 1940, but was won back during the Ethiopian campaign of the following year. Since then the War Office, rather than the Colonial Office, has been supervising the administration.

Livestock-raising is the main occupation. In 1936 the Protectorate had 2,500 sheep, 2,000,000 goats, 1,500,000 camels, 30,000 cattle. By treaty arrangements with Ethiopia, inhabitants of British Somaliland are allowed to pasture their stock in the Ogaden for a part of each year. Little agriculture is carried on. The principal exports are animal products, Somaliland being second in importance in the British Empire as an exporter of skins. Total

exports in 1941-2 amounted to £191,464, and imports to £635,743.

Before World War II Berbera was the capital; since then Hargeisa has become the seat of the military administration.

Italian Somaliland (Somalia). This is the largest, most populous and most promising (economically speaking) of the four Somalilands. It has approximately 1,200,000 inhabitants. After the Fascist conquest of Ethiopia it was enlarged and incorporated (June, 1936) into newly created Italian East Africa. Reduced to its original boundaries, Somalia has since 1941 been under British military administration, and few Italians now remain in the colony.

The Italians developed several plantations along the Webi Shebeli and other streams, raising bananas, cotton, sugar, kapok, etc. The natives engage largely in the usual Somali pursuit of stock-raising, with agriculture being important only in the southern and less desertic part of the colony. The Italians constructed a railway from Mogadishu (the capital) to the Villaggio Duca degli Abruzzi (70 miles), as well as several hundred miles of good highway, and an artificial harbor at the capital where the monsoons had hitherto interfered with port operations.

Ethiopian Somaliland. This is usually referred to as the Ogaden and was the disputed area over which the war with Italy broke out in 1935. It is the most backward of the Somali areas, with almost no towns or trade. Though nominally a part of the Ethiopian empire, it is now temporarily under British military administration. Its ultimate status has yet to be settled.

Events, 1945. The proposal that all of Somaliland be united under British rule was made several times during the year by East African publicists. However, Ethiopia and France both opposed any alienation of their territories. The former, in fact, put in a claim for Somalia at the time of the London Conference in September, when the Great Powers were scheduled to draw up a treaty with Italy. This question was still pending at the end of the year.

In British Somaliland the colonial authorities initiated various reforms. Among these was the establishment of a number of schools, including one for girls—the first ever to be opened in this old-fashioned Moslem country.

On Sept. 5 France and Ethiopia signed an agreement permitting the French company to resume management of the Jibuti-Addis Ababa Railway as provided in the 1908 concession. They also established a commission to fix the boundary between Ethiopia and French Somaliland.

During the year Ethiopian officials made various charges against the officers of the British military administration in the Ogaden and the "reserved areas" around Harar. Their accusations included illegal requisitions of property, closing off wells to the local population, and in general behaving as if the region were to remain a part of British territory.

ROBERT GALE WOOLBERT.

SOUTH AFRICA, Union of. A self-governing dominion of the British Commonwealth of Nations, composed of 4 provinces. Area, 472,550 square miles. Seat of the government, Pretoria; seat of the legislature, Cape Town. The territory of South-West Africa, administered by the Union of South Africa under mandate of the League of Nations, has an area of 317,725 square miles.

Government. Executive power is vested in the Governor General, appointed by the Crown on

recommendation of the South African Government, and in the Executive Council (Cabinet) which is responsible to Parliament. Parliament consists of a Senate of 44 members, 8 elected from each province, 8 nominated by the Governor General and four elected by the native population; and a House of Assembly of 153 members made up of 150 members elected from the provinces, roughly in proportion to the white population, for a five-year term unless dissolved; and three members elected by the natives who are listed on the Cape Native Voters' roll.

The standing of the parties in the Senate, based on the election of Nov., 1939, was as follows: United, 26; Reunited National, 13; Labor, 1; Representatives of the Natives 4 (1 vacant). In the House of Assembly (election of July 7, 1943) the standing of the parties was: United, 89; Reunited National, 43; Labor, 9; Dominion, 9; Representatives of the natives, 3; Independent, 1. Acting Governor General (Officer Administering the Government) since the death of Sir Patrick Duncan in 1943, Nicholas J. de Wet, to be succeeded on Jan. 1, 1946, by Major Gideon Brand van Zyl, appointed Oct. 28, 1945. Prime Minister, Field Marshal Jan C. Smuts.

Events, 1945. Prime Minister Smuts, who has a record of diligent participation in British Commonwealth conferences, was away from the country from Mar. 31 to July 16 on an extended tour connected with his attendance at the United Nations Conference at San Francisco. In the early months of the year the Prime Minister maintained his hold over the House of Assembly by outriding with a vote of 96 to 45 a censure motion of opposition leader D. F. Malan, directed against Smuts' announced policy of full employment. On Feb. 14 the Prime Minister again intervened with vigor in the Assembly, defending the decisions made at Yalta against Malan, who had attacked the Crimea Conference as a betrayal of the Atlantic Charter and pleaded for Germany as a bulwark in Europe against the threat of Bolshevism. Later, on Mar. 22, Malan urged that Smuts should press at San Francisco for an "Africa charter" closing the door to Asiatic immigration and ending Africa's exposure to Communist propaganda.

Smuts was the only prominent veteran of the Versailles Conference who played a conspicuous rôle at San Francisco. On May 1 he was unanimously given permission to speak to the plenary session out of alphabetical turn. He then made an eloquent address calling on the great powers to bear their responsibility for using their power to prevent war. He was one of the few speakers to pay a tribute to President Wilson's efforts to prevent war by means of world organization. Smuts consistently refused to fight the big-power veto, because of his belief that the big powers must carry the responsibility for maintaining order. His draft of the preamble to the Charter was the basis of the draft ultimately incorporated in that document.

Speaking in Ottawa on his way back from San Francisco, Smuts called the British Commonwealth "the first and greatest regional group in history" and the forerunner of similar groups which will eventually solve the vast problem of human government. He urged preparedness as a necessity for security. Prime Minister Smuts also paused in London on his way home as well as in Italy, where he visited South African troops. He was back in Pretoria on July 16. On Aug. 30 he had a rousing reception in Johannesburg, a city which in his long career had sometimes greeted him otherwise.

The United Nations Charter was ratified by South Africa by executive action on Oct. 9. According to an official declaration, the Government had intended to submit the Charter to Parliament in the usual way, but considerations of haste as well as of the Union's international prestige made it desirable to join as a foundation member. South Africa became the 40th member of the Provisional International Civil Aviation Organization when it signed the interim agreement in December. On Oct. 30 Smuts suggested that if the Council of Foreign Ministers continued to disagree an international peace conference should be convened.

Governmental Changes. The appointment of Major Gideon Brand van Zyl as Governor General, to take office on Jan. 1, 1946, was welcomed in South Africa. Major van Zyl is the first Governor General of the Union born in South Africa. After the death of the last Governor General, Sir Patrick Duncan, General Smuts assured Parliament, in response to nationalist representations, that the Government would recommend to the King that the office should be filled by a South African national able to speak Afrikaans.

Changes in the South African Cabinet announced on Nov. 9 included the creation of a separate portfolio of Health and Housing, to which Dr. Henry Gluckman, chairman of the National Health Services Commission, was assigned. Colin F. Steyn succeeded W. B. Madeley as Minister of Labor and H. G. Lawrence became Minister of Social Welfare and Justice.

These changes were necessitated by the withdrawal of the Labor Party from the Government in October. The other minority party which joined the Coalition Government after war broke out in Sept., 1939, the Dominion Party, withdrew in the latter part of November. Even without these two parties General Smuts retained a majority of 23 in the Assembly and a comfortable majority in the Senate.

Demobilization. The Union Government was taking steps in the problems of demobilization. A volunteer army of 345,000 men and women, of whom 223,000 were Europeans, had to be returned to civilian life as smoothly as possible, both for their own security and because the opposition parties, which contested participation in the war, were angling for the soldier vote. In 1944 the Government announced a plan for which it was prepared to spend over £100,000,000, roughly the amount of the defense vote for one year of war. Immediate benefits in 1945 included a war gratuity, a clothing allowance and free medical treatment. The guarantee of employment is the basis of the plan. For the estimated 40 per cent who have no employment to which to return there is maintenance on military strength with full pay and allowances until suitable work is found. South African casualties to May, 1945 were 37,422, of whom 6,417 were killed.

Racial Problems. South Africa, with nearly 7,000,000 natives in its total population of less than 11,000,000, and with a considerable Asiatic minority, continued to be harassed by racial problems. A quarrel of long standing with India proved impossible of adjustment in 1945. Some 250,000 Indians, largely settled in Durban and Natal, where they form the small trader and domestic servant class, have been the subject of a dispute with India since the passage of the Pegging Act of 1943. This act, passed by the Smuts Government, expressed the South African desire for racial segregation and added further to the onerous disabilities, legal and economic, of the Indians settled in Natal. An inter-Commonwealth agreement to limit the operation of the act was contravened by the Natal

Provincial Council's Residential Property Regulation Ordinance of June, 1944.

On Feb. 9 the Indian Central Assembly passed a vote of censure on the Government of India for its failure to recall its High Commissioner from South Africa. In an interim report published in Cape Town on June 11, the judicial commission investigating the Indian problem in Natal said that because of non-cooperation on the Indian side and the animosity on both sides there was little hope of friendly discussion and compromise. "In fact, any Indian leader who suggested such a thing would be committing political suicide," the commissioners observed. The commission took a serious view of the attitude of Indian politicians in India.

South Africa continues to need immigrants, according to a statement by Prime Minister Smuts at the annual congress of the Free State United Party on Dec. 3, but it is implicit in all such statements that only European immigration is desired. White supremacy is maintained only by the restriction of the franchise and a limitation on the entrance of natives to the towns provided for by the Urban Native Areas Act. On the other hand, education among the natives is progressing rapidly and efforts are made to eliminate the problems arising from illiteracy and social custom and prejudice. A Government White Paper published on Feb. 9 gave details of an expanded social security program to create productive employment for all and to improve the Union's health services, in so far as the measures could be implemented in co-operation with the provinces.

The People. The total estimated population on June 30, 1942, was 10,708,500, of which 20 per cent were Europeans and 80 per cent non-Europeans. Natives form 68 per cent of the population, whites 22 per cent, Cape-colored 7 per cent and Indians 3 per cent. Approximately 56 per cent of the Europeans speak Afrikaans, 39 per cent speak English, 3 per cent English and Afrikaans, and the remainder German and Yiddish.

For Europeans 3,622 state-conducted and state-aided public schools were available in 1941, and for non-Europeans 5,229. The five universities had an enrollment of 9,704 full-time and 2,007 part-time students in 1942. The religious affiliations of the European population at the time of the 1936 census were: Dutch churches, 55 per cent; Anglican, 19 per cent; Methodist, 8 per cent; with the remainder largely Roman Catholic, Jewish and Presbyterian.

The Economy. Gold mining, the most important industry of South Africa, normally accounts for more than 70 per cent of the value of all exports. Other minerals produced are iron, coal (in exportable surplus), diamonds, manganese, and a number of other valuable minerals. Manufacturing, including iron and steel products, made great progress during the war. Agriculture remains an important part of the economy, with cereals, citrus fruits, wine, tea, and tobacco as important products. The raising of cattle, sheep and goats occupies a considerable part of the population. Drought conditions which threaten to leave their effects for a number of years caused crop losses and cattle mortality in the Eastern Cape Province in 1945. Normally South Africa sends gold, diamonds, manganese, chrome, copper and wool to the United States.

ALZADA COMSTOCK.

SOUTH AMERICA. A continent comprising 10 republics (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela) and three colonies (British Guiana, French

Guiana, and Surinam). Total area, about 6,937,445 square miles (17,968,000 square kilometers). Estimated population, 88,680,000 on Jan. 1, 1940.

SPAIN. A state of southwestern Europe. Capital, Madrid.

Area and Population. Area, 196,607 square miles, including the Balearic and Canary Islands. The estimated population on July 1, 1943, was 26,491,166 (26,251,188 in 1940), including the Islands. Vital statistics in 1942 showed 527,046 births, 384,749 deaths, 188,040 marriages. On Jan. 1, 1942, the populations of the chief cities were estimated as: Madrid, 1,101,831; Barcelona, 1,087,099; Valencia, 459,460; Seville, 312,874; Zaragoza, 239,851; Málaga, 238,264; Murcia, 198,387; Bilbao, 195,890; Granada, 155,827; Córdoba, 144,042.

Defense. According to official reports, Spain has an active army of about 200,000 men and trained reserves of 1,300,000. The air force is supposed to be composed of 5,000 men and 5,000 reserves. Nevertheless, late in this year (1945), Franco made a statement that he had a million men under arms. The above figures do not include the Foreign Legion which, in the opinion of Republican circles, has absorbed over 40,000 German soldiers who took refuge in Spain after the liberation of France. The army's equipment is inadequate and obsolete as the Government was unable to replace it during the war. There is a law requiring two years military service. The navy has 3 cruisers, 20 destroyers, 4 sloops, and a number of auxiliary vessels.

Education and Religion. According to official statistics, between 40 and 45 per cent of the adult population is illiterate. Primary education is free and compulsory although the law is not enforced in this respect. The government claims that about 45,000 public elementary schools function with a total of 2,000,000 pupils in attendance. There are over 100 schools for secondary education and 12 universities besides 58 normal schools for the training of elementary school teachers.

Catholicism is the religion of Spain and at the end of the Civil War, the Roman Catholic Church was reestablished as the state religion. The religious orders recovered their legal status, lost during the Republican era, including control and jurisdiction over cemeteries, teaching rights, and other privileges.

Production. Agriculture is Spain's principal economic activity. Mining, manufacturing and fishing rank next in importance. Estimated yields of her chief crops in 1944 were (in metric tons): wheat, 3,000,000 (a 20% increase over the 1943 output); barley, 1,500,000; oats, 560,000; rye, 490,000 (an increase of 20% over 1943); corn, 600,000; rice, more than 200,000; potatoes, 3,500,000; chickpeas, unofficially reported at 110,000; beans, 98,000. The production of the 1943-44 orange crop was estimated at 661,380 short tons (500,000 metric tons in 1942-43); olive oil, 240,000 tons in 1944 (465,000 in 1943); almonds, slightly over 12,000 tons; filberts, 25,000 tons; sugar, approximately 140,000 tons; and cotton, 4,200. The wine output was estimated at 422,000,000 gallons which is about 75% of the normal yield. A fair year was reported in the livestock and dairy industries, although no figures are available.

Chief among the forest products in 1944 were: cork, 62,000 tons, and turpentine and rosin, 41,000 tons.

Mineral and metallurgical output (in metric tons): coal, 11,600,000 (10,800,000 in 1943);

lignite, 1,200,000; pig-iron, 470,800 in the first ten months of 1944; steel, 548,600 in the first ten months of 1944; iron ore, 1,115,565 in the first eight months of 1944 in continental Spain; zinc ore, 43,261 (71,091 in 1943); copper ore, 218,000 in the first eight months of 1944; copper metal, 6,119 in the first eight months of 1944; manganese ore, 22,785 in the first eight months of 1944 (compared to 24,027 for the entire year, 1943); tin ore, 518 in the first eight months of 1944 (compared to a total output of 464 during all of 1943); lead metal, 32,000 (40,000 in 1943); fluorspar, 55,000 (36,000 in 1943); mercury ore, 35,000 flasks of 35 kilograms each; tungsten ore, approximately 2,450 in the first eight months of 1944 (compared to a year's total of 3,600 in 1943); and potash, 131,000 (90% increase over 1943).

The chief manufactures were cotton textiles, paper and cement (1,111,000 tons in the first nine months of 1944 as compared with 1,122,000 during the corresponding period in 1943). The production of paper and cardboard in 1943 was approximately 116,000 tons, while the output of glass, formerly one of the chief manufactures, was reduced to an insignificant figure.

Foreign Trade. The latest available statistics on Spain's foreign trade cover only the first half of 1944. According to these official figures (in gold pesetas), total exports for this period were 1,641,278,864 (1,474,423,160 during the first half of 1943); imports, 1,367,993,229 (1,283,524,672 for the corresponding period in 1943). The chief imports were foodstuffs, manufactured goods and raw materials, with chemicals, principally fertilizers, taking a leading role during the second quarter of 1945. Exports included foodstuffs, raw materials and manufactured goods.

Finance. The amount of foreign exchange which the Spanish Foreign Exchange Institute had accumulated by the end of June, 1944, reached \$45,000,000 in dollar balances, while sterling balances amounted to £5,200,000 in gold and silver exchange. The volume of currency in circulation at the end of Nov., 1944, was 16,928,000,000 pesetas, compared with 16,361,000,000 pesetas at the end of 1943. Government expenditures for 1944 were estimated at 13,294,690,131 pesetas and receipts at 10,330,288,516 pesetas. A public loan was floated at 3% in Feb., 1944. Army, navy, and air force expenditures absorbed 26.6% of the ordinary budget appropriations in 1944. The budget for 1945, the exact amount of which was not stipulated, is lower than that provided for 1944. However, significantly, there was, for the first time since the formation of the Falange Party, no mention in it of any appropriations for that organ, other than the designation of 32,318,000 pesetas to the "Secretary General of the Movement." The public debt at 1,535,652,000 pesetas is an increase of about 336,000,000 pesetas over last year, while the allotment to the Special Tribunal for the Repression of Communism and Freemasonry remains the same at 400,000 pesetas.

In December, the National City Bank of New York, acting as agent for the Spanish Government, notified the International Telephone and Telegraph Corporation that it had received \$2,000,000 for the amortization of the corporation's holdings of \$50,000,000 of Spain's sixteen-year, 4 per cent, United States dollar bonds.

Transportation. In Nov., 1945, the national railway system included about 12,855 kilometers of broad-gauge track, while the narrow-gauge railways included about 75 small private company lines with an aggregate length of approximately 3,500

kilometers. Carloadings in the first eleven months of 1944 were reportedly totaled at 2,769,000 tons compared to 2,875,600 in 1943. Despite the continued shortage of equipment, the railroads carried an amount of traffic during the second quarter of 1945 which was approximately equal to that carried during the corresponding period of the preceding year. The Spanish merchant fleet carried about 9,200,000 tons in 1944. The total registered tonnage of the fleet was estimated at 1,000,000 tons in 1944, while on Jan. 1, 1943, the fleet aggregated 1,019,884 gross tons.

Government. As a result of the civil and semi-international war that ended in 1939, the Republican Government established in 1931 was replaced by a dictatorship headed by Generalissimo Francisco Franco y Bahamonde as Caudillo (Leader) of the Empire, Chief of State, Commander in Chief of the Armed Forces and Head of the Falange Española (Government Party). The political groups backing the Government included, beside the Falange (Fascist), the Carlists, the Clericals, and the Monarchists, as well as some independent groups of the landed aristocracy and moneyed élites. All other political parties were outlawed. Until this year, General Franco exercised his dictatorial power either directly, or through his Cabinet, or through the governing organs of the Falange (see YEAR BOOK, 1944, p. 587). This year, however, some changes were introduced into the government, such as the creation of the "Consejo del Reino" (Council of the Realm) to function as an advisory board to the Head of the Government. Also, Franco gave signs of trying to appear before the world with the superficial exterior of a democracy by convening the Cortes or Parliament. Naturally the Cortes was composed of deputies not freely elected by the people (see below, Events). The Falange Española, in another grand gesture to win Allied friendship, was dissolved.

Events, 1945. To analyze the principal events of Spain in 1945, it is necessary to take into consideration not only the occurrences within the peninsula and the activities of the group in power, but also the efforts of the other two political groups endeavoring to overthrow the dictatorship of Caudillo Francisco Franco. These are the Monarchists, grouped around Prince Juan de Borbón, and the Republicans in Exile, who represent the legitimate government displaced in 1939 by Franco's insurrection, which was aided by the Fascist forces of Hitler and Mussolini.

Franco's Spain. At the beginning of the year, Franco's main problems were the Allied victories and the inevitableness, already evident, of Hitler's defeat. The liberation of France occasioned encounters with the Spanish refugees who had crossed the border in 1938 and joined the French underground resistance forces (see Year Book, 1944, p. 588). Later the reverse of this situation was repeated. Those who crossed the border into Spain were the Vichyite collaborationists, and their friendly reception by Blue Spain provoked France's indignation.

The Caudillo's political party began to show signs of disintegration. The Falange started a political flirtation with the Monarchist groups. Franco, disturbed about the outcome of the war, offered himself to England as a mediator for peace, but the arrogant Caudillo, who had in 1939 announced the reconquest of Gibraltar as a plank in his political platform, was snubbed by the British Lion.

This first effort to "appease" the Allies having

failed, Franco tried his hand with the United States. His Minister, Lequerica, hastened to aver that "Spain considered herself a spiritual belligerent against Japan." This statement was attacked by the liberal press in the U. S. and provoked, among others, Representative John M. Coffey's accusation that Franco's consul in the Philippines was an open collaborator with Japan. This appeasement feeler failed in the face of the Falange's unsavory activities and the help given by Franco, according to U. S. Military Officials, to German troops still resisting all along the French coast.

Life within the peninsula continued as it had in the latter part of 1944. The minority group composed of aristocrats, landowners, merchants, and the military class reaped the benefits of a war economy and normal business with England, the U. S. and Latin America, while the masses on the other hand, suffered the effects of inflation. Unrest was expressed by a series of attacks on the Falange. In the latter part of February the District Leader of Cuatro Caminos (Madrid) was shot to death, together with another member of the institution. The assailants were not found, but 16 persons accused of being "reds" were executed. The burial of the Falangists gave the party an opportunity to make a display of force accompanied by the frantic attacks against Jews, Marxists, Liberals, and Freemasons characteristic of Fascist propaganda.

Important positions in the Army remained in the hands of the Falange. Appointed to the post of Captain General of Madrid was General Agustín Muñoz, wanted by the Soviet Union as a war criminal for his atrocities against civilians when he led the famous Blue Division sent by Franco in support of Hitler's invading armies.

In an attempt to receive an invitation to the San Francisco Conference, Franco started another "appeasement offensive" late in March, Lequerica pronouncing more "timely" statements about the "Christian ideals common to the U. S. and Spain."

Ambassador Norman Armour upon his arrival in Madrid, was showered with praise by the Falangist press, which stressed the fact that as the husband of a Russian princess, he must naturally be opposed to the Soviet Union.

At the same time, Franco took the first step in his attempt to find a way of severing relations with Japan. He accused this nation of abusing the Spanish population in the Philippines, and tried to get his colleague, the dictator of Portugal, to do likewise. The latter refused the invitation since Portugal had already protested against the Japanese occupation of its possessions (see Year Book, 1944, p. 489).

In Madrid, bombs placed in the offices of the newspaper *Información* and in that of the Under Secretary of Education, manifested the growing dissatisfaction of the Spanish people with the Franco regime. As a counter-measure, a Parade of Victory to commemorate Franco's triumph was organized in April. The celebration met with a cold reception. Notably absent were the U. S. Ambassador and General Francisco de Borbón, an important member of the Monarchist group. Falangists of Ceuta (North Africa) were accused by the U. S. of planning the assassination of President Roosevelt enroute from the Yalta Conference. There were insistent rumors of Franco's approaching fall and the formation of a government by the C.E.D.A. (Spanish Rightist group). Death by the garrot was the fate of one of the eight "reds" executed as a further reprisal for the Cuatro Caminos incident.

In his "fight for San Francisco," the Caudillo decided to lift his censorship on the activities of the foreign press. The result proved unfortunate for the Caudillo's sense of security. Associated Press correspondents issued a release declaring that, after travelling throughout Spain, they could state without reservations that the majority of the people were in favor of the Republic. Franco began to disagree with the Falange. The Army became more and more favorably disposed to the Monarchy. The refugees sought by the Allies continued to arrive. Laval and the Belgian Fascist Degrelle went to Spain.

The Cortes met on May 14 and approved a "Bill of Rights," intended as another "democratic" play for Allied sympathy, but the effort proved futile. At the request of the delegate from Mexico, the world dignitaries assembled at San Francisco formally condemned the Franco regime.

A significant event occurred during the month of June. Norman Armour, U. S. Ambassador, demanded that the German Embassy in Madrid be sealed and turned over to the Allies. Franco's reply was to lock the doors and give the keys for "safe-keeping" into the hands of the Falange-controlled Safety Brigade. When the Allied diplomats arrived on the scene, all important documents had disappeared, especially those referring to the work of the Gestapo in Spain.

The internal situation grew more tense toward the middle of June and there were rumors of guerrilla uprisings, particularly in Andalucía, Galicia, Asturias, and Santander. Later, in connection with the international scene, Lequerica attempted to explain the United Nations' censure of the Franco Government at San Francisco by attributing it to the influence of "foreign Freemasons." In July, the Laval case further strained Spain's relations with France. Franco continued his devious policy and once more tried to appease the democracies by announcing the creation of the "Consejo del Reino" (Council of the Realm), a political institution of medieval character.

Another crisis shook the foundations of the Cabinet shortly after. Lequerica resigned and was replaced as Minister of Foreign Affairs by Alberto Martín Artajo, a secondary figure whose political experience had been limited to his relations with the Vatican. Of the 12 new ministers, only four did not belong to the Falange. There was one innovation however: the three military ministers were not appointed by Franco but by their respective units.

On July 24th the Falange held its political meeting, but the press did not publish Franco's speech. Extra-officially it was known that the meeting had dealt with the "official" dissolution of the Party and plans for government institutions to absorb its various organs.

Franco continued his "divide and rule" policy. In a move to weaken the position of the Monarchists, he began to "build up" titled Carlos VIII, grandson of Carlos VII and an aspirant to the throne. By this procedure he hoped to reawaken the "Carlist" movement which, during the 19th century, had caused so much civil strife in Spain. Carlos went to reside at Andorra at government expense.

The Caudillo took a summer vacation in August, meanwhile meditating over the domestic and international situations. The Monarchists refused to participate in the Consejo de Regencia. The well-known philosopher José Ortega y Gasset (one of the founders of the Republic, but not now connected with its followers) arrived in Spain, and

it was rumored that he had been called upon to form a transition government.

Bevin's statements with regard to non-intervention in Spain's domestic matters raised the Caudillo's spirits. So cheerful was he that he praised the British Labor Party, promised elections in Spain, and went so far as to predict that "this will be the century of Socialism." His happiness was short-lived for, on August 23, President Truman declared, "We don't like Franco and his Government," a statement which the U. S. Embassy in Madrid was quick to release.

Franco's troubles continued. Russia insisted upon its international claim for damages caused by the Blue Division. Belgium demanded the extradition and return of Degrelle. The War Crimes Commission requested the extradition of the German officers who had found refuge in Spain.

Franco tried to gain time and thought that by suppressing the Fascist salute he could placate the Allies. An interesting note was that the Falangist press did not comment on the fact. The official announcement was merely inserted in the Gazette, official Government organ, in the following manner: "Decree number 263 of April 24, 1937, is revoked." Not daring to attack the democracies directly, the Caudillo released his pent-up emotions by attacking the Freemasons, whom he accused of controlling the governments of the U. S., England and France.

At the end of September, governmental circles were commenting on the "evolution," the term descriptive of the arrangement by which Franco was to retire from the government and the Monarchy was to appear upon the scene.

Franco tried to win over De Gaulle, who needed Spanish goods to feed the French people. The diplomatic relations between the two countries were singular. Spain had an Ambassador in Paris who could not function as such because the French Government would not accept his credentials. De Gaulle had a representative in Madrid who was not considered a diplomat, and with whom the necessary arrangements were made for the shipment of the required goods to France. Franco discreetly mentioned the idea of the "evolution" at a military meeting held in Vitoria (September 19). In his speech he claimed that he had to leave the government because he needed a rest, but that he would do so when and how he desired, although it would be soon.

Toward the end of the month the Government of Bolivia severed diplomatic relations with Blue Spain in a note which stated that Franco's Government was "contrary to the democratic principles of the United Nations." Spanish Minister of Foreign Affairs Artajo hastened to issue a statement regretting the incident, which he blamed on the "vehemence of the leftist groups," and expressing his hope that "reason and justice would show the Bolivian Government the mistake they had made."

In the U. S., the American Committee for Spanish Freedom made known the fact that it had requested the State Department to intercede for the liberation of Spanish underground leaders who were still political prisoners. While in France, the President of the Latin American Confederation of Workers, Vicente Lombardo Toledano, requested the delegations of the International Labor Conference to petition their respective governments for the severing of diplomatic and commercial relations with Spain and for the recognition of the Republican Government headed by Gual.

Another hammer blow to the foundations of the Franco regime was dealt by Spain's exclusion from

the Allied Conference on Tangier. The American State Department, as well as Downing Street, accepted the Russian viewpoint as expressed in the following statement, and signed an agreement to that effect. "In signing this final act, the Soviet delegation adheres to the view which it expressed previously to the effect that, although the Spanish people are incontestably interested in the administration of the international zone of Tangier and although Spain must finally be called to participate in the appropriate international organisms, this participation of Spain in the administrative organisms of the zone of Tangier cannot be allowed until General Franco's regime in Spain, which was established with the support of the Axis Powers and which in no measure represents the Spanish people, shall be replaced by a democratic regime."

In Spain the "evolution" idea continued to take shape. The Caudillo met with a group of army men in Toledo and in an address shrouded in secrecy, pointed out that there were three roads for Spain to follow, two of which he counted upon one million soldiers to oppose by force. They were, according to him, the great effort being made by his opponents to implant their ideas forcibly from foreign countries, and secondly, the possibility of another Civil War. Against both contingencies "his army" stood, an impenetrable barrier! The third and only acceptable one to him, was that the opposition should be willing to deal amicably with him. "We are ready to accept any proposition not unworthy of our Catholic ideas and anti-Communist principles," he was quoted as saying.

In November, the leader of the Spanish guerrillas and former member of the F.F.I. accused Franco, from London, of having enlisted 40,000 German soldiers into his Foreign Legion after the liberation of France. The insecure Caudillo found solace, however, in a radio broadcast originating from the Vatican in which the Pope called the faithful of Spain to defend the Church, and praised them for their defense of Catholicism during the Spanish Civil War. He closed by extending the Papal Benediction to Generalissimo Franco.

However, the blessing did not prove as fruitful as was desired. Two days later the White House announced that Ambassador Norman Armour, for personal reasons, would be retired at his own request from the foreign service and that he would shortly be returning to the U. S. In Washington diplomatic circles, this was interpreted to mean that the post would not be filled until a change of government should take place in Spain. The incident was extremely important, considering the fact that Franco had based his hopes for improved relations with the U. S. on Armour's anti-Soviet attitude.

Hastily donning a democratic guise, the Caudillo granted a Bill of Rights to the Spanish people. The traditional rights of man are apparently present in the document, but each "right" is tied to a legal technicality, and each liberty offset by a duty. Furthermore, the six most important rights may be suspended at the will of the Government. The press announced that the very day on which the decree was published, Madrid was swamped with monarchic pamphlets, and there immediately followed numerous arrests of "violators" of the new law.

What Franco's "liberties" mean may be seen by examining the condition of the Spanish press. Despite Franco's reestablishment of freedom of the press, the majority of the papers remain under

the management of the Falange or of organizations favored by the regime, their rightful owners having been deprived of their property. In early December, this was the situation. *El Liberal* and *El Heraldo* were still closed down, and *Madrid*, a governmental afternoon paper was being printed on their presses. *Ahora*, *El Popular* and *Estampa* were in the hands of Manuel Aznar, Franco's Ex-Ambassador to the U. S., who was publishing in their stead a weekly picture magazine, *La Semana*. *Arriba*, the official Falange organ is now published in a modern plant formerly belonging to the powerful newspapers, *El Sol* and *La Voz*. The evening paper *Información*, during the war vigorously pro-Axis, is published on the presses of the former *Libertad* and *Informaciones*. Although it is expected that some of the former owners will try to regain control of their presses, true freedom could hardly exist, because all papers must obtain their newsprint through the Falange syndicate and no one is allowed to work on a paper without a Falange permit.

After his farcical concession of "liberties," Franco reestablished the Somatén, the police corps which, during the Monarchy, worked in the service of employers against their workers and was responsible for the murder in Barcelona of union members and political leaders in the years 1917-1923. By means of this step, Franco proposes to have at his disposal another militarized agent of repression designed to make room for the Falangists and ex-combatants of the Blue Division.

Republican Spain. When Franco's regime triumphed in Spain, the Prime Minister, Dr. Juan Negrín, established his residence in London, while most of the members of the Cortes, with its President, Diego Martínez Barrios, accepted the hospitality of the Mexican government, the only American state that has never recognized the Franco Government.

It was natural, as a result of the favorable political climate and freedom which the refugees enjoyed, that the Republican Government's activities should largely take place in Mexico. During the Chapultepec Conference, Barrios requested all the American nations through Ezequiel Padilla, Mexican Minister of State, to sever diplomatic relations with the Caudillo. At that time, six Allied nations (Mexico, the Soviet Union, Czechoslovakia, France, Yugoslavia and New Zealand) had no diplomatic relations with Blue Spain. However, in spite of the efforts of the liberal elements present at the conference, it was decided to leave the question of Spain untouched since it was an "extracontinental affair." This idea of "non-intervention" in Spain seemed to prevail among the majority of the United Nations countries comprising the bloc controlled by the U. S. and Great Britain. Nevertheless, the San Francisco Conference's decision, suggested by the Mexican delegate, to exclude Franco Spain from the United Nations Organization (see above, **FRANCO'S SPAIN**), inspired the Republicans in Exile to reorganize their government.

Dr. Negrín came to the U. S. in the latter part of May. Julio Álvarez del Vayo (Ex-Minister of State) had a long conference with Molotov in San Francisco. The "Junta Suprema de Unión Nacional," underground organization, and the Communists offered to help the former Prime Minister reorganize the legitimate government.

Early in June Negrín arrived in Mexico, faced first and foremost by the task of selecting a new President of the Republic to fill the vacancy left by the resignation and subsequent death of Manuel

Azaña. The Cortes, required by the Constitution to convene on Spanish territory, considered the feasibility of meeting on a ship flying the Spanish flag.

Finally on August 17, the 96 members residing in Mexico met in the Palacio de la Diputación, whose Chamber of the Cabildos had been temporarily declared Spanish territory by a special authorization of the Mexican Government. In accordance with the Republican Constitution of 1931, and with the intention of bringing about the crisis which would make the reorganization possible, Dr. Negrín tendered his resignation as Prime Minister, and the Cortes appointed Martínez Barrios provisional President of the Republic. The President immediately empowered José Guiral Pereira to form a new government. Guiral failed to form a government representative of all parties as he had hoped. His government was formed of the majority groups, the most important being the Republican Leftists, the Republican Action and the Socialist Party. He also enlisted the cooperation of noted statesmen not connected with the Cortes, among whom were Ex-Minister Angel Ossorio, the well-known jurist, Luis Jiménez de Asua, and the Ex-President of the Tribunal of Constitutional Guarantees, Alvaro de Albornoz. Other distinguished figures of Spanish public life and letters formed a part of the new Cabinet. For example, Fernando de los Rios, Ex-Ambassador and professor, became Minister of State and Augusto Barcia assumed the post of Head of the Treasury Department.

The cabinet members belonged to the different parties in the following proportion: four ministers belonged to the Republican Left; two were Socialists; one belonged to the Unión Republicana; one was a Basque Nationalist; one belonged to the Esquerrá Republicana; one to the Catholic Action; and one was unaffiliated. Dr. Negrín offered his help and cooperation, but he and the other members of his following refused to accept any position in the new government, saying: "As Republicans, whether the government pleases us or not, we are pleased that a government has resulted from the present crisis. We must not attack it nor make its existence more difficult." Besides the Negrín faction of the Socialist Party, other groups excluded from the reorganized government were: the Unión General de Trabajadores, strongest trade union in Spain; a section of the Leftist Republicans, the Federal Party, the Asturian Workers Alliance and some minor groups.

The Republics of Guatemala, Panama, and Bolivia granted recognition to the Republican Government and Venezuela followed suit in November, barely two months later.

Anxious to sound out Washington, Fernando de los Rios, Minister of State, came to the U. S., and there made public statements to the effect that the Allied Nations should give Franco a specified date by which he should have liberated political prisoners, reestablished citizen's rights and set the date for elections.

The Cortes continued to convene in Mexico and agreed to remain there until after Franco's collapse, when it plans the following procedure. Within three months of the Republican Government's return to Spain, it will take a census and draw up democratic voting lists; call for the election of Deputies; reestablish the Tribunal of Constitutional Guarantees and designate a President of the Republic to succeed Barrios. Prime Minister Guiral called for Republican action on a wide front and especially every possible aid to the underground movement within the peninsula. Re-

ferring to the religious question, Guiral urged that freedom of belief be maintained and that the Republican Government attempt to reach an understanding with the Church whereby the latter's jurisdiction would be clearly defined. He stressed that the Government will insist upon the necessity for removing both the Church and the Army from factional politics.

The Prime Minister's speech elicited an overwhelming vote of confidence from the Cortes, in which only Negrín's Party and a few minor groups refrained from participating. The Galician group and the Esquerrá Catalana, although voting confidence, reproached Guiral for not giving other minority groups a share in the government.

Monarchist Spain. Early in the Franco dictatorship, the Spanish Monarchist Party supported the Caudillo because he had ousted the hated liberals, responsible for the downfall of Alfonso XIII. Later however, the Monarchists realized that Franco and the Falange intended to retain power solely for themselves; they opened a campaign to reinstate the monarchy as a compromise between the dictatorship and the Republic.

The general lines of this campaign have not changed during 1945. In January, the aspirant to the throne, Juan de Borbón, spoke of going from Switzerland to London, but the British Government, through its Ambassador in Berne, notified Juan of its disapproval and the Prince deferred his projected journey. Later in the same month, Franco's Ambassador to England, a rabid Monarchist, was reported to be trying to ascertain whether or not Russia would be interested in the monarchist "solution." Apparently he met with a cold reception by the Soviet Union and the subject was dropped.

Paris witnessed a display of Monarchist propaganda in March. In the Spanish Church on the Rue de la Pompe a high mass was offered to commemorate the death of Alfonso XIII. Don Juan was present, but the Queen Dowager was not. Curiously enough, the ceremony was organized by Manuel Mateu, Franco's new Ambassador to France, known to be a Nazi sympathizer. According to the French press, the affair met with a lukewarm reception and was, apparently, a disappointment to Juan, who had expected an enthusiastic demonstration from the French Monarchists. In a manifesto published that same month to coincide with the anniversary of the end of the Spanish Civil War, Juan demanded the throne and promised the restoration of Constitutional liberties. This document, openly anti-Franco, indicated the Monarchists sensed the Caudillo's increasingly weak position in the face of Allied victories.

Meanwhile in Spain, the Monarchists were becoming more and more estranged from the dictatorship. Antonio Goicochea, who had been considered, together with the Duke of Alba and the Duke of Borbón, as one of the three mainstays of the throne, resigned as Director of the Bank of Spain. There appeared to be a growing trend among Juan's followers to speak openly of the Restoration.

Juan and Franco exchanged emissaries in September. The Caudillo notified the Prince that he planned to establish the Council of the Realm (see above, *France's Spain*), but evidently no agreement was reached, because Juan refused to deal further with the emissary.

A split in the Monarchist ranks appeared around this time. Jaime de Borbón, Juan's older brother who cannot aspire to the throne because he is a deaf mute, declared his intention of working for the accession of one of his sons to the throne. With

his family, he left for Italy to further his project. A bright spot appeared on the Monarchist horizon toward the year's end however, when Franco made his statement about the possibility of retirement (see above, *FRANCO'S SPAIN*). Nevertheless, Russia's insistence that Franco be judged as a war criminal disturbed them, as this could very well retard negotiations.

In world diplomatic circles the opinion prevailed that Juan would hesitate to reenter Spain without the approval of England and the U. S., and that he was unwilling to come to any agreement with Franco which might connect him in any way with the Caudillo's Government. It appears that Franco may have suggested to the Bourbon aspirant that in return for the throne, he be appointed Chief of the Army. Such an arrangement would naturally be awkward for the new Government, since Franco's name would still be on the Russian list of wanted war criminals. Nor would a government composed in this fashion readily obtain the recognition of the other major powers. Although it is reported that Franco's proposal had been approved by Vatican circles in Rome, the Russian demand has paralyzed all action, since Juan insists upon Anglo-American guarantees of approval.

The year ended with Don Juan again planning a trip to England, as indicated by the arrival in London of one of his emissaries.

Meanwhile, within the Monarchist circle in Spain a new group is taking shape, the Catholic Party of the Left, which follows along the same lines as the French Mouvement Republicain Populaire. The director of the movement is a priest, advisor to Franco's Minister of Foreign Affairs.

A dispatch from Washington dated December 16, intimated that, according to informed diplomatic circles, a break with Franco would soon be forthcoming. Such speculation coincides with a French Foreign Office announcement that the U. S. and Great Britain have been asked to consult with France concerning a rupture with Spain at a time when Ambassador Norman Armour, en route to retirement in the U. S., is in Paris.

Spanish Possessions. The area and population of the colonial possessions of Spain are approximately as shown in the accompanying table. Considered an integral part of Spain for administrative reasons are the Canary Islands off the northwest coast of Africa, Melilla and Ceuta in North Africa and the Balearic Islands in the Mediterranean.

SPANISH POSSESSIONS

<i>Colonial Possessions (Capital)</i>	<i>Area in Sq. Ms.</i>	<i>Population</i>
Possessions in Africa:		
Rio de Oro and Adrar (Villa Cisneros).	109,206	840
Ifni	965	20,000
Spanish Guinea (Santa Isabel)	10,036	167,000
Fernando Po, Annobon, Corisco, Great Elobey, Little Elobey	795	23,846
Spanish Morocco (Tetuan)	7,700	750,000
Total, Africa	128,696	934,686

Río de Oro and Adrar are divided politically into three zones: the colony, the Protectorate, and the occupied territory. Agriculture is practically non-existent in this colony, fishing being the principal economic activity. Ifni, ceded to Spain by Morocco in 1860, was only nominally occupied by that country until April 6, 1934, when it saw the Spanish flag raised on its shores for the first time. Contained within its small area are several harbors and villages, the inhabitants of which are engaged in fishing and in cultivating dates and garden produce.

The Spanish territory on the Gulf of Guinea is divided, according to a decree of April 16, 1935, into two districts: Fernando Pó and Continental Guinea. The first includes the island of Fernando Pó; the second, the continental zone of Río Muni, together with the archipelago of islands from Great Elobey to Little Elobey, and Corisco and Annobon. The territory as a whole is under a governor-general assisted by a sub-governor and a secretary-general, while each of the territories into which the colony is divided is under the control of a territorial administrator.

Fernando Pó's main product is cocoa which constitutes its chief export. Continental Guinea contains vast forests and luxuriant vegetation, but its lack of harbors and its inaccessible rivers have prevented the development of more than a few Spanish, French, and English factories, so the exploitation of its resources has been impeded.

MIGUEL JORRIN.

SPANISH AFRICA. The territorial possessions of Spain in Africa have in toto an area of 134,716 square miles and a population in excess of a million and a half. These territories are divided as follows:

Morocco. Along the northern shore of Morocco are five places of Spanish sovereignty, or "presidios," including Ceuta (the southern counterpart of Gibraltar) and Melilla. They have an area of 82 square miles and 145,000 inhabitants. Along the western coast of Morocco, south of Casablanca, lies the enclave of Ifni (741 square miles and 35,000 inhabitants) also under direct Spanish sovereignty. However, the most important of Spain's possessions is her Protectorate in the Northern Zone of Morocco, of which the area is 7,592 square miles and the population approximately one million. There is also a Protectorate of the Southern Zone which is larger but much less populous (area 10,039 square miles, population 12,000).

The Sultan of Morocco is nominally the sovereign within the two Spanish Zones, where he is represented by a Khalifa. In reality the administration is carried on by the Spanish High Commissioner, who is responsible to the Madrid Government and who resides at Tetuan. With the exception of some 50,000 Europeans and 13,000 Jews, the population of the Spanish Zones is Moslem and largely Arabic-speaking. The inhabitants of the Rif Mountains in the Northern Zone are very warlike and formerly gave the Spanish much trouble. General Franco used many of them during the Spanish Civil War (1936-39) as shock troops. Few educational opportunities are available for the native population.

The natives depend upon a rudimentary agriculture, grazing, and other primitive occupations. Important quantities of iron ore are mined in the Northern Zone. The Southern Zone and the Ifni territory lie virtually outside of the world economy.

Spanish Sahara. This almost wholly desert region has an area of 105,409 square miles and less than 50,000 inhabitants. Administratively this colony is under the jurisdiction of the High Commissioner of Morocco.

Spanish Guinea. This colony consists of several parts, both island and mainland, with an area of 10,040 square miles and a population of 138,797 (of which only about 1,000 are Europeans). Included in this administrative unit, which is administered by a Governor who resides at Santa Isabel, are the islands of Fernando Po, Annobon, Corisco and the two Elobeyes. The continental part of the colony is by far the largest in area but is relatively undeveloped. Cocoa, coffee and lumber are the colony's principal exports.

Not included in Spanish Africa are the Canary Islands, which administratively are a part of the metropolitan country.

Events, 1945. The victory of the United Nations inevitably caused the authorities in the Spanish Zones of Morocco to review their relations with France. During the period when the latter had been a defeated and occupied country, the Khalifa had pursued a quite independent policy towards his sovereign, the Sultan of Morocco. The withdrawal of Spanish troops from Tangier also had repercussions on Spanish prestige throughout northwest Africa (see TANGIER).

The recruitment of Nigerian laborers for the plantations of Fernando Po—a practice of long standing—was strongly criticized by Nigerian publicists, who felt that the British Government should insist on greater safeguards to protect Nigerian workingmen from exploitation, particularly in view of the authoritarian character of the Spanish régime.

ROBERT GALE WOOLBERT.

SPANISH LITERATURE. Since it is still true that only first class mail can be sent from continental Europe, it is not yet possible to buy books from Spain. The receipt of journals and periodicals is also still interrupted, hence it is extremely difficult to obtain information about what is being published in Spain at the present time. Only the first seven numbers of the *Bibliografía Hispanica* have reached this country as this article goes to press. For all of these reasons, the information upon which this article is based must be regarded as incomplete.

In recent years most of the news from Spain has been so tragic or so disappointing to those who admire Spanish genius and the Spanish spirit, that it is heartening to read any news whatsoever of the publishing of books, and to realize that in spite of the long interruption of civil war and of chaos in Europe, Spanish literature is alive and productive.

One indication of this liveliness is the celebration on April 23 of the Fiesta del Libro, organized by the Instituto Nacional del Libro Español, in collaboration with the Sindicato Nacional del Papel, Prensa y Artes Gráficas. On this occasion all book-sellers gave a ten percent discount on sales. Special celebrations were held in the University, El Instituto de España, the Real Academia de Medicina, and the Biblioteca Central Militar. The University opened in connection with the Fiesta a Bibliographic Exposition of rare books, incunabula and codices. Also on display at the University Exposition were two thousand books acquired since the last Fiesta, many of them presented by the Cultural Institutes of France, Britain and Germany, and La Casa Americana.

Another indication of interest in books is the successful Book Fair, which was held in May and early June of this year. For it a double line of pavilions was erected along the Paseo de Recoletos, in front of the Biblioteca Nacional. Photographs of the Fair show attractive modernistic white booths, curved back from the sidewalk and lined with shelves, and each crowned with a shell-like hood. The dry climate of Castile makes possible such an open air display, and the lovely trees of Recoletos framed the pavilions. The Fair was sponsored by the *Vicesecretaría de Educacion Popular*, and was in charge of the *Instituto Nacional del Libro Español*. There were 94 booths, a real "city of the book." The Spanish railway network gave a discount to those attending the Fair, and people came from many parts of Spain. The only two

foreign countries represented were Portugal and Argentina. A catalog of the books exhibited has been published and contains 5,220 titles. The Fair was a success financially; during two weeks it averaged 50,000 visitors daily and sold 1,472,259 pesetas worth of books. In addition to the exhibits of publishers and bookstores, there were special displays of official government publications such as those of the Ministries of Agriculture, Industry and Commerce. Open air concerts, with bands and orchestras, and a "teatro guiñol" for the children, added gaiety to the Fair.

The books which sold best during the Fair may be some indication of current interests. They were, in this order: *Chistes*, by Joaquin Xaudaró (late caricaturist for *A B C* and *Blanco y Negro*); *Rimas*, by Becquer; *Una Chica Topolino*, by José Vivente Puente; *Aquel Madrid*, by Chispero; *Nueva York. Un Español entre rascacielos*, by Gaspar Tato Cumming; *Gente Bien*, by J. P. Marquand; *Historia de un Año*, by Mussolini; *Los que vivimos*, by Ayn Rand, and *Jane Eyre*, by Charlotte Brontë. This rather strange hodge-podge of translations and books of local interest, with a scattering of the classics, is typical of most of the lists of works published this year. It is reported that two of the most sought after books at the Fair were the *Obras completas* of Victor Pradera, with an introduction by General Franco, and the *Obras completas* of José Antonio, published by the Vice-secretaria de Educacion Popular.

Both the Fiesta and the Feria are symptomatic of a lively interest in books. But upon turning to the actual lists of what has been published, it is not easy to pick out distinguished names and titles. One is struck at once by the large number of religious works, and the astonishing number of translations, especially of United States authors. There are translations of Kenneth Roberts, Lloyd Douglas, Nordhoff and Hall, Marquand, Sinclair Lewis, as well as of Milton, Shakespeare (many of these), Bulwer Lytton, Dickens, J. B. Priestley, P. G. Wodehouse, James Hilton, Chateaubriand, Molière, Kipling, Stevenson, Edgar Wallace and H. G. Wells, to mention only a few. No translations of German works appeared. The Brontës seem to be enjoying a vogue; there are several translations of their novels, and a play based on *Wuthering Heights*, "Cumbres Borrascosas," by Aurelio Tejedor y Arturo Guasch. This large number of translations of both foreign classics and recent works would seem to reveal that Spain is still feeling the dislocations of the civil war, and the exile of many of her writers.

Among learned works published this year the following are worthy of note: *Catálogo Bibliográfico*, by Don Antonio de Guzman (no. 14); *Diccionario General Ilustrada de la Lengua Española*, with an introduction by Menendez Pidal, a linguistic dictionary announced for "immediate publication" by Editorial Spes, of Barcelona; the *Obras Completas* of Ramon del Valle Inclán, of which the first volume has a preface by Azorín and the second volume a preface by Benavente; *Lirica Popular de la Alta Extremadura*, compiled by M. García Mates, an exhaustive bibliography on the folk music, folk dances and costumes of the region; *Naufrajos* by Alvar Nuñez Cabeza de Vaca, with the text revised and a preface and notes by Justo García Morales (two works are published together under this title, i.e. "La relación . . . del gobernador Alvar Nuñez Cabeza de Vaca . . . y los Comentarios . . . por Pero Hernandez . . ."; *Vida y Hazanas de Don Fernando Alvarez de Toledo, Duque de Alba*, by P.

Antonio Ossorio, S.I., with a preface by the present Duke of Alba (this edition of a contemporary biography of the third Duke is described as a "great contribution to knowledge" about him); the *Obras Completas* of Baltasar Gracián, edited by Don Evaristo Correa Calderón; *Entremeses*, by Miguel Cervantes Saavedra, edited with notes by Adolfo Bonilla y San Martín; *Centenario del Estreno* de "Don Juan Tenorio," which contains "Los Valores Plásticos en el 'Don Juan' de Zorrilla," by Fernandez Jimenez Placer, "Zorrilla y sus Editores," by Francisco Cervera, and "El Drama 'Don Juan Tenorio,' Bibliografía y Comentarios" by Antonio Sierra Corella; *La Unidad del Idioma*, by D. Ramon Menendez Pidal (lecture given at the opening of the Asamblea del Libro Español); *Bio-bibliografía de Concha Espina*, by Francisco Valle de Juan; *La Imprenta en Extremadura, 1489-1800*, by Antonio Rodriguez Monino (an extensive bibliography).

Of especial interest to libraries, if and when they can be made available in this country, would be two catalogs which have been published in 1945: *Anuario del Libro y de las Artes Gráficas*, a classified list for 1944, and the fifth and last volume of the *Catálogo general de la Librería Española, 1900-1930* (volume four goes through Q).

Poetry in Spain just now seems to center about the two leading literary reviews in Madrid, both of which are edited by poets. They are *Corcel*, edited by the young Valencian poet Ricardo Juan Blanco, and *Garcilaso*, edited by "one of the best young poets of Spain," José García Nieto. Two older poets have published important works during the year: Vicente Aleixandre, *Sombra del Paraíso*, and Damaso Alonso, *Hijos de la Ira*. Both of the works reflect religious maturity, and the tragic experience of the civil war. A new Madrid publishing house, the Editorial Hispanica, has been publishing some striking collections of poetry. In the series "Adonais" one volume appears monthly; twenty have already been published. Some of these are new poets, and others are classics. Another series, called "Reino de la Literatura Castellana" is made up of anthologies edited by Don José Manuel Blecua; the one published this year is *El Mar en la Poesía Española*. Others published previously have been *Los Pájaros*, and *Las Flores*, in Spanish poetry. A recent volume from the Johns Hopkins University Press, *Contemporary Spanish Poetry; selections from ten poets*, translated by Eleanor Turnbull, with Spanish originals, and personal reminiscences of the poets by Pedro Salinas, is a valuable contribution to a knowledge of the poets of the present day. The book contains one hundred and forty-six poems with the translations printed on the opposite pages.

In fiction, as has already been pointed out, most of the titles are translations of foreign works, or reprints. *El Barco de la Muerte*, by Juan Antonio de Zunzunegui, is reviewed as the most ambitious and the most successful novel of an important novelist. A biography in fiction, *Don Juan de Austria, el Caudillo de Lepanto*, by Joaquín Martínez Frieria, suffers all the defects of this hybrid form. A one volume edition of the novels of Concha Espina has proved popular in spite of its bulk of 1,894 pages.

The above statement is also substantially true of published plays; here again one finds many translations, with Shakespeare leading in popularity, many new editions of both Spanish and foreign classics, and few new titles. *La Casa de Aizgorri*, by Pio Baroja, has been published in dramatic form by Espasa Calpe in Buenos Aires.

A play based on Daphne Du Maurier's *Rebecca* has been written by Enrique Rambal, Manuel Soriano Torres, and Jose Javier Perez Bulto.

There has been received in this country an interesting publication commemorating the twenty-fifth anniversary of the establishment of the *Hemeroteca Municipal* in Madrid: *Hemeroteca Municipal de Madrid*, Madrid, Artes Gráficas Municipales, 1945. This special library of newspapers and periodicals has grown from a very small collection to 160,000 volumes, in spacious and attractive quarters. The commemorative volume contains an essay by Azorin, "La Contingencia en la Hemeroteca Municipal," and one by Gregorio Maraón, "Dos Monologos sobre la Prensa y la Cultura." It also contains a *Bibliografía de la Historia de la Prensa Hispanica*, an amplification of the bibliography published by the *Hemeroteca* in 1929.

In January, 1945, the Count of Romanones was re-elected Director of the Academia de Bellas Artes, and Don Andres Ovejero, the art critic, was elected *Bibliotecario perpetuo*. Admiral Estrada, the Marqués de Luca de Tena, and the Arabist Don Emilio García Gomez were elected to the Real Academia de la Lengua, filling the seats left vacant by the deaths of Joaquín Alvarez Quintero, Manuel Linares Rivas, and Antonio Machado.

On May 30 occurred the death of Don José Castillejo, former Secretary of the *Junta para Ampliación de Estudios* in Madrid. In 1936 the Civil War drove him from Spain to England, where he had been living since; from 1941 to the time of his death he was a Lecturer in Hispanic Civilization at the University of Liverpool.

In May died P. Crisogono de Jesus, a leading authority on San Juan de la Cruz. He was, at the time of his death, about to be awarded the National Quater-centenary Prize for his biography of San Juan de la Cruz.

Don Salvador Bermúdez de Castro, Marqués de Lema, well known for his studies on the relations between Church and State, died in April, 1945.

Don Gustavo Gili, doyen of Catalan publishers, died in Barcelona in April.

NICHOLSON B. ADAMS.

SPELMAN FUND OF NEW YORK. The Spelman Fund was incorporated in 1928 with a principal of \$10,000,000. The Trustees of the Fund have power to use the principal as well as income to carry out its purposes. During 1945, the Fund continued its program directed at the improvement of methods and techniques in the field of public administration. Support was extended to public and quasi-public agencies engaged in disseminating information regarding advances in administrative practice, in developing new types of organization and operating methods, and in actually installing administrative improvements in governmental agencies. The Chairman of the Board of Trustees is Charles E. Merriam. The offices of the Fund are located at 49 West 49 Street, New York City.

SPORTS IN THE UNITED STATES. Few people realize the magnitude of our absorption in sports, both as amateur participants and as spectators of professional games.

Mr. Marty Berg, editor of *Sports-Week*, figures that eight out of ten people of the entire population, over 8 years old, either take part each year in one of the 125 national sports; patronize professional baseball, football, racing and the like; or are associated with the sports manufacturing and construction industries.

In consequence sports has grown into Big Business. Nearly four billions of the national income during 1945 went into sporting equipment, and the hundreds of other expenses a practising sportsman knows only too well; into paid admissions; and the hundreds of expenditures needed to provide the great professional shows.

Also, that four billions of dollars was small: it will be six billions during 1946. And this colossal activity and industry affects personally even the few Americans who do not take part, since, for example, New York State alone collected over 30 million dollars in race track taxes which otherwise would have had to come out of the already depleted public pocketbook.

The social effects of that, and the whole philosophy of sport, are not under discussion here. The social facts are a phenomenon well worth recording in its picturesque details.

Greatest Sports Year Ahead. With the war's end, all sports anticipate unparalleled popularity and participation. The greatest impetus behind the resurgence will be the release of 11 million men and women from the armed forces. Softball, one of the Army's most popular recreations, now holds an unprecedented number of participants. By September, 1945, the Army and Navy were purchasing sports equipment at the rate of \$28,000,000 annually. Included in the total purchases was sufficient equipment to outfit 100,000 softball teams and 50,000 baseball teams. Many hospitalized veterans received new introductions to sports through their therapeutic values. One survey among the armed forces revealed that nearly 75 percent of the servicemen intended to hunt or fish on their return to civilian life. Before the war, a minimum of 15,000,000 hunting and fishing licenses were issued annually. During the war, gasoline and tire restrictions forced motor boating, automobile racing, fishing, and practically all other sports that required travel by participants or spectators, into fretting dormancy.

However, the restrictions of the war did help to promote bowling, swimming and other sports whose facilities could be brought to the participants. Witness to bowling's growing popularity were the defense plants and Army camps and stations, where recreations centers invariably included bowling alleys. Collapsible bowling alleys were transported to U.S. troops in the Aleutian Islands.

Sport Highlights of the Year. The end of the war in Europe on May 8 signalled a record-shattering interest in major sports. Once restrictions were lifted, sports-hungry enthusiasts created new attendance and receipt records in horse racing, baseball, football and golf.

Horse racing reached the greatest national sports prominence with startling records in mutual betting and attendance. At least 20,000,000 persons, as estimated by the Thoroughbred Racing Associations of the United States, Inc., thronged to the nation's race tracks and passed \$1,306,514,314 through the mutual windows. New York State led with \$450,663,190 wagered by a record 4,623,123 racing fans. Betting at Belmont Park tolled a new mark of \$5,016,745 on September 22, and Jamaica held a national record crowd of 64,670 persons on Memorial Day. The Arlington-Washington Park tracks at Chicago were jammed by a total of 2,456,926 spectators.

Horse of the year was Louis B. Mayer's Busher, three-year-old daughter of War Admiral, who earned \$273,735 and won 10 of her 13 races. Hoop, Jr., owned by Fred W. Hooper, won the richest of Kentucky Derby prizes—\$64,850. Star Pilot, stable

mate of Beaugay from the Maine Chance Farm of Mrs. Elizabeth Graham, whose stable grossed \$589,170, won the Belmont Futurity and was voted the best juvenile colt of the season. Mrs. Elizabeth D. Jacob's Stymie topped the handicap field with \$225,375.

Contributions to worthy charities by racing associations was estimated at \$5,659,477, with New York tracks donating \$1,576,560.

New York realized over \$30,333,299 in taxes from state race tracks.

Harness racing drew \$40,000,000 in betting that reached its peak at the Roosevelt Raceway, Westbury, Long Island, where 17,000 persons wagered \$481,000 on August 8. Titan Manover, owned by E. Roland Harriman and Major Elbridge T. Gerry, was brilliant as the harness horse of the year, winning the Hambletonion in straight heats. His performances so outclassed competition that the public was not permitted to bet on him.

The scandal of stimulation cases near the close of the season blemished the flourishing race track year. The final results on the charges of stimulating horses with ephedrine are pending against seven eastern trainers.

Public enthusiasm for baseball, which had chafed under nearly four years of restrictions, provided one of the greatest box-office years in the history of the game. Despite the mediocre caliber of play, the two major leagues counted a record total of 11,375,135 spectators, with five major league teams enjoying more than a million admissions in home attendance.

The World Series shone as the richest bonanza of its kind when a record of 333,475 persons fixed the total receipts at \$1,492,454, plus \$100,000 for radio rights.

Major baseball sale of the year was the New York Yankees, with all its minor league chains, for \$2,800,000 to Larry McPhail, Dan Topping and Del Webb.

Baseball precedent fell when Jackie Robinson, Negro shortstop for the Kansas City Monarchs, was signed by Montreal of the International League.

Professional football drew 1,918,631 fans in 68 league games. The play-off between the Cleveland Rams and the Washington Redskins resulted in a new National League record of \$164,542 for a single game.

College football attendance leaped 35 per cent over the 1944 total as 7,262,147 fans packed stadia throughout the nation. Thirteen 1946 New Year's Day bowl games drew 397,000 persons.

Basketball popularity reached new heights, ignoring the bribery charges aimed at several members of the Brooklyn College team. Because of the widespread and diverse popularity of the sport, no accurate attendance figures are available. Madison Square Garden, however, was filled to capacity in 26 college double-header games that attracted 442,293 spectators.

Byron Nelson underscored his leadership in the field of professional golf. He won eighteen major tournaments and \$64,000 in war bonds to set a new earnings record. His largest purse was \$10,000, won at the Tam o' Shanter open at Chicago that drew a record crowd of 105,000 spectators and highlighted professional golf's greatest season.

Boxing followed the general sports boom and grossed approximately \$13,000,000, an increase of nearly \$3,000,000 over the estimated 1944 total. Despite the lack of major outdoor bouts, professional boxing receipts in New York State reached nearly \$4,000,000 in 1945, of which \$149,258 went to the State in taxes. California ranked second with

proceeds of \$1,984,363 and Pennsylvania was third with \$1,200,000. The New England States scored the biggest increase, next to New York, over the 1944 total. Massachusetts, Connecticut, Rhode Island, Maine and New Hampshire reported an aggregate of \$1,494,158, with Massachusetts registering \$987,535, nearly a 50 per cent increase over the 1944 total of \$644,667.

Some of the statistics that follow were made available by *Sports-Week*.

The information and statistics on horse racing would not have been possible without the cooperation of John I. Day, Jr., Service Bureau chief of the Thoroughbred Racing Associations of the United States, Inc. (See also articles on separate sports.)

ARCHERY

National Archery Association,
77 Franklin St., Boston, Mass.

Men's Team—Akron, O., Athletic Club

Women's Team—Cleveland, O., Athletic Club

With war production eliminating new hunting firearms and ammunition since 1940, the bow and arrow in some sections resumed its ancient place as a hunting weapon. During 1945 at least six deer were bagged in northeastern States.

HORSE RACING

Thoroughbred Racing Assoc. of the United States, Inc., 400 Madison Ave., New York, N.Y.
 Turf Committee of America, 745 Fifth Ave., New York, N.Y.

In the banner horse racing year of 1945, the following facts predominated:

In eighteen of the twenty states in which racing was conducted on a major scale, revenue to the states aggregated \$65,484,121.30.

Louis B. Mayer's filly, Busher, by War Admiral and Baby League, was the leading money-winning horse of 1945 with total purse earnings of \$273,785.

John Longden was the leading rider as measured by purses won by his mounts, the total being \$981,977, a record for one year.

Most successful owner was Mrs. Elizabeth N. Graham, of the Elizabeth Arden cosmetic fame, owner of the Maine Chance Farm. Her horses won 58 races, were 22 times second and 17 times third for a total earning of \$589,170.

Stanley Lipiec was the leading trainer according to the number of winners trained. He won 127 races and his horses earned a total of \$238,361. Tom Smith (trainer of Mrs. Graham's Maine Chance Farm) was the leader in money won, \$589,170. According to Mr. Day of the Thoroughbred Racing Associations of the U.S., Inc., Smith

SUMMARY OF SALES

Sale	No. Sold	Amount	Average
Keeneland (Summer)	405	\$3,134,250	\$7,739
Meadowbrook	155	633,100	4,085
Keeneland (Fall)	276	999,750	3,622
Maryland	23	43,750	1,902
California	63	122,000	1,937

should be named the top trainer of the year inasmuch as he developed a sensational string of two-year-olds for Maine Chance while Lipiec handled cheaper horses, many of which he claimed when they were at a peak of form.

1945 AMERICAN LEADERS

OWNERS				
Owner	1st	2nd	3rd	Won
Maine Chance Farm	58	22	17	\$589,170
Louis B. Mayer	37	24	11	533,100

S. Lipiec	127	\$238,361
L. Sierra	104	83,040
T. Altamira	97	89,276
H. Jacobs	95	499,985
G. Ellis	67	71,28

STALLIONS

Horse	Get	1st	2nd	3rd	Won
War Admiral	26	58	39	34	\$588,997
Challenger II	71	116	110	117	480,710
Bull Dog	68	137	110	102	439,758

Although more yearlings have been sold in other years, the 992 yearlings sold at auction in 1945 fetched a record total of \$5,091,420, for an average of \$5,132.

The highest prices paid at any of the sales sessions occurred at Keeneland where Mrs. Elizabeth N. Graham made bids of \$46,000 for a filly by Blue Larkspur-Risk

Washington Park. * Run at Jamaica Park.

and \$42,000 for a brown colt by Bimelech-Blinking Owl. At the Meadowbrook sales Mr. William Helis paid \$35,000 for a colt by Blue Larkspur-Gallant Lady.

The consistent high prices paid for young stock at 1945 auctions indicates the high stake and purse values of American races, especially those that have grown customary in New York State since the installation of the pari-mutuel system of betting in 1940. For instance, the 1948 Belmont Futurity prize has been set at \$50,000 and with the nomination list already reaching 1,621 unborn colts and fillies, the final value to the winner promises well to surpass \$100,000. This is the largest nomination list in 19 years for the Belmont classic.

SHOW CATS**Empire Cat Club**

Daybreak, owned by Mrs. Mabel A. Lafayette

LIVESTOCK

Livestock breeding, although not strictly a sport in the active competitive meaning, has achieved such a degree of avocational and international public interest that it well exceeds horse and dog shows in popularity. Dozens of great livestock shows are held annually throughout the midwest. Although the interest in livestock shows parallels the spectator interest in horse shows, the great auctions are hinged to commercialism—a type of commercialism that involves a gamble. When a purchaser at an auction buys a single Hereford bull for an announced \$51,000 it is not for the purpose of owning a superb specimen of the breed. The purchaser is gambling that the bull will father ten or fifteen calves that will eventually return his money in sales. Sometimes, the bull proves to be an indifferent father.

Interest in livestock breeding and shows is weak along the eastern metropolitan areas, but grows much stronger as it advances towards the hinterland grazing areas and the midwestern cattle centers of Chicago, Kansas City, Denver and Fort Worth.

The average urbanite whose interest in livestock goes as far as cutting into a steak or pot roast can very little appreciate that prize cattle provoke as much interest as prize horses. Like horses, an appraisal of cattle takes into consideration not only performance and appearance, but also the purity and record of the antecedents. An indica-

tion of cattle values can be seen in the fact that one 2-year-old Hereford bull, Del Zento 1st, raised on W. D. Delaney, Jr.'s, Lazy D Ranch, Ada, Okla., sold for \$51,000 to George Rodens of Toronto on Jan. 5, 1946. Previously, the beef cattle record price stood at \$50,000, at which figure Dan Thornton, Gunnison, Colo., sold not one, but two Hereford bulls.

The largest Hereford sale was the Baca Grant Sale at Crestone, Colo., during September when 442 head sold for \$521,125 to buyers from 24 States and Canada. The high marks of the sale were the purchase of a 24-day-old bull calf for \$6,100 Gosmmer Brothers, La Veta, Colo.,—a world record for a calf so young—and the purchase of the herd sire, Baca E. Domino 33rd, by the Albert Noe Farms, Pulaski, Tenn., at the sale top of \$27,700.

The Wyoming Hereford Ranch in its 13th annual sale at Cheyenne early in October eclipsed all other sales with the highest average of \$4,371 for 64 head, 28 bulls averaging \$5,680 and 36 females averaging \$3,353. The price records that had stood for 13 years were broken by this 1945 edition of the WHR sale. At this auction, Dan Thornton purchased Helmsman 20th for \$27,500 and sold him a few weeks later for \$50,000.

The Greater Pan American Hereford Exposition in Dallas during November held the following winners:

Grand Champion Bull—MW Larry Domino 37th, owned by the Milky Way Hereford Ranch, Phoenix, Ariz.

Grand Champion Female—Martha Mischief J, owned by the Flat Top Ranch, Walnut Springs, Tex.

Grand Champion Steer—Tango, owned by Merlyn G. Kothman, Mason, Tex.

Top among 1945 auction sales of Shorthorn cattle was the 17-month-old bull, Edyllyn Royal Leader 21st, which was sold to Hal Williams, Madera, Cal., for \$7,000 by Thomas E. Wilson, Wilson, Ill., at the 1945 International Shorthorn Congress at Chicago.

An all-time Shorthorn sale record was established in December at the Chicago Market Fat Stock Show (war substitute for the International Livestock Exposition) where Tomahawk, exhibited by Carl Henkel, Mason City, Iowa, and Joe Deaux, Belmond, Iowa, sold at \$10 a pound for a total of \$11,100—a world high total for a single steer. At the show, Tomahawk was named grand champion over all breeds in competition with 1,640 steers, which comprised the largest show known in the 44-year history of the International.

Winners in other national Shorthorn shows were:

International Shorthorn Congress, Chicago

Grand Champion Bull—Edellyn Royal Leader 21st, exhibited by Thomas E. Wilson, Wilson, Ill.

Grand Champion Female—Lavender Supreme, exhibited by Elden McLachlan, Ewart, Mich.

Denver National Western

Grand Champion Bull—Edellyn Peerless Mercury, exhibited by Curtiss Candy Co., Dundee, Ill.

Grand Champion Female—Princess Susanna, exhibited by Sni-A-Bar Farms, Grain Valley, Mo.

Southwestern Fat Stock Show & Expo., Ft. Worth

Grand Champion Bull—Sni-A-Bar Control, exhibited by Sni-A-Bar Farms.

Grand Champion Female—Princess Susanna, exhibited by Sni-A-Bar Farms.

National Polled Shorthorn Congress, Memphis

Grand Champion Bull—Daybreak's Creed, exhibited by Albert Hultine & Sons, Saronville, Neb.

Grand Champion Bull—Daybreak's Creed, exhibited by Carl D. Cross, Rockford, Ohio.

The highest price ever paid for a Brown Swiss animal occurred at the Jane of Vernon National Sale at Waukesha, Wisc., on Labor Day when a six-months-old bull, The Laird of Lee's Hill, sold for \$10,500 to the Eastern Stephenson County Breeding Association, Lena, Ill.

The Laird's sire, Jane's Royal of Vernon, was first prize Sr. Get of Sire at the 1942 Waterloo Dairy Cattle Congress, the 1941 National Dairy Show and the 1941 Dairy Cattle Congress. He has thirty-eight daughters with Herd Improvement Registry records or Register of Production records, two of which have produced over one thousand pounds of butterfat in a year.

During 1945, 1,363 Brown Swiss animals sold for a total of \$476,817, or an average price of \$377.42 in 26 public sales. A new high was set at the Jane of Vernon National where 38 head went through the sale ring for an average of \$1,886.

Among the Guernsey breed, top sale of the year was Quail Roost Noble Primrose that brought \$17,000, being purchased by the Curtiss Candy Company of Chicago and consigned in the Quail Roost Sale by George W. Hill, Quail Roost Farms, Rougemont, N.C. This was the fourth highest price to be paid for any female at public auction. The second high female was Argilla Fair Palotterrie 8rd, purchased for \$14,000 by Fairlawn Farms, Inc., Port Chester, N.Y., from the Argilla Farm, Ipswich, Mass., at the Topsfield Sale.

Three Guernsey bulls reached the \$10,000 mark in 1945 auctions. Langwater Forward sold in the Rock Creek

Dispersal to Barger Brothers, Jefferson, Ohio, for \$15,000, making the sixth bull of the breed to bring that figure or more at public auction. Meadow Lodge King's Oklahoma, consigned by Kent B. Hayes, Meadow Lodge Farm, Oklahoma City, to the Indiana Sprung Sale, was sold for \$13,200 to Everett R. Beatty, Huntington, Ind. Quail Roost Rose Maxim, consigned by Fairlawn Farms, Inc., in the Quail Roost Sale was purchased for \$11,000 by W. M. Camp, Franklin, Va.

During the year, 8,348 Guernseys sold in 162 sales for \$8,375,513, for an average price per head of \$404.35, an increase of \$46.63 per head over the previous year. It was the highest average price paid for Guernseys since 1922.

In the year's sales, 134 Guernseys sold for \$2,000 or more. These sales offer an interesting aspect to the enormous prices paid for an individual head. Proof that an expensive investment very often produces dividends can be found in the sires related to the 134 consignments. Langwater King of the Meadows sired five that brought \$26,700; Blakelord Lord Jim sired four that sold for \$9,900; Quail Roost Rose Maxim four that sold for \$9,100 and Myhaven King four that sold for \$11,050. Three other bulls sired three each that included Riegeldale Melba's Emory, whose offspring brought \$10,050; Coronation King of Pine Manor, whose offspring sold for \$9,000 and Langwater Patrician, whose three progeny brought \$8,550.

The top 1945 price for Holsteins, a dairy breed, was \$21,000 paid by Hays, Ltd., Calgary, Alberta, for a female, Montvic Bonheur Pietje B, sold at the dispersal of the Bancroft Acres herd, Flint, Mich. In the same sale, Raymondale Ideal Successor sold for \$18,500, the year's highest male price. Successor is the sire of numerous proven and prepotent sons, four of which have sold for more than \$10,000 each.

At the Bancroft Acres sale a total of \$122,000 was realized from the sale of approximately 200 animals, making this one of the outstanding dispersal sales of the Holstein breed for all time.

Newly crowned "queen" for lifetime production of milk for the Holstein-Friesian breed, and as far as can be determined, for all dairy breeds in the world, is the 16-year-old Essex Suzune April Belle, owned by County of Essex, Cedar Grove, N.J., who has produced 248,183 pounds of milk and 8,358 pounds of butterfat.

At the end of the third quarter of 1945 available reports showed that 6,563 registered Holsteins sold at public auction for \$2,252,553, making an average of \$343.22 per head.

The highest selling Jersey was a \$10,500 bull, Orange Blossom Basileus, sold by the Orange Blossom Farm, Ontario, Cal., to E. K. Carey, McPherson, Kan. Of the year's 95 sales involving 4,432 head of Jersey in a transaction of \$1,171,120, the greatest was the Orange Blossom sale that saw 243 Jerseys sell for \$135,525. The annual A.J.C.C. President Cup went to Blossom May of Redmond who produced 18,604 pounds of milk and 1,072 pounds of fat, 2 x 365 days, for Ralph W. Keller of Redmond, Wash.

The top Aberdeen-Angus at auction in 1945 was a \$15,000 heifer sold by J. Garrett Tolcan, Pleasant Plains, Ill., and bought by Fowler McCormick, Glen Urquhart Farms, Barrington, Ill.

In the Ayrshire breed, highest auction price developed around an \$8,950 bull sold by Vista Grande Farms, Cropseyville, N.Y., to J. W. Alsop, Wood Ford Farm, Avon, Conn.

AVIATION

National Aeronautics Association, 1025 Connecticut Ave., Wash., D.C.

Like automobile and motor-boat racing, aviation races and records are a Twentieth-Century developed sports interest. While the older and more traditional sports pit man against man, or man against time and distance, aviation activities, in their civilian aspect, are primarily a test of man's mechanical ingenuity against the forces of time and distance. During the war years no aviation tournaments or shows were held.

Seattle to Wash., D.C.—6 hours, 8 min. by Army Boeing Stratoliner on January 10.

Montreal to London—13 hours, 34 min. by Royal Air Force Liberator on March 27.

Hawaii to Wash., D.C.—17 hours, 20 min. by B-29 Superfortress on September 2.

Wash., D.C. to Burbank, Cal.—8 hours, 39 min. by Lockheed Constellation on Sept. 9.

Guam to Wash., D.C. Non-stop—35 hours, 5 min. by B-29 Superfortress on Nov. 21.

Los Angeles to New York—5 hours, 28 min. by B-29 Superfortress on Dec. 16.

Long Beach, Cal. to New York—4 hours, 18 min. by Lockheed P-80, jet propelled, on Jan. 26, 1946, at an average speed of 584 m.p.h. and top speed of 660 m.p.h.

Altitude—44,980 feet, American record, by P-38 Lightning at Burbank, Cal. Record made April 30, 1943; announced July 20, 1945.

Speed—611 m.p.h. by Gloster Meteor jet plane at England on Nov. 8.

JOSEPH P. BLANK.

STABILIZATION ADMINISTRATOR, Office of. This office was established as the Office for Economic Stabilization within the Office of Emergency Management on October 3, 1942, by Executive Order 9250, to control as far as possible inflationary tendencies which would impede prosecution of the war and the operation of the domestic economy. The same order established the Economic Stabilization Board to advise the Director of the Office.

The Director was authorized to formulate and develop a comprehensive national economic policy for the control of civilian purchasing power, prices, rents, wages, salaries, profits, rationing, subsidies, and related matters.

The Stabilization program had the purpose of preventing avoidable increases in the cost of living, cooperating to minimize unnecessary migration of labor from one business, industry, or region to another, and facilitating the prosecution of the war. Executive Order 9328, of April 8, 1943, provided for regulations to stabilize the national economy by controlling price, wage, and salary increases. With the ending of the war, the program calls for control of both inflationary and deflationary tendencies which might impede the orderly transition to a peacetime economy.

Under Executive Order 9620, September 20, 1945, the Office of Economic Stabilization was abolished and all functions and authority were transferred to the Office of War Mobilization and Reconversion. Within the Office of War Mobilization and Reconversion was established the Office of Stabilization Administrator. The functions and authority of the Director of Economic Stabilization, transferred under Executive Order 9620 to the Director of the Office of War Mobilization and Reconversion, were delegated to the Stabilization Administrator.

JOHN CASKIE COLLET.

STATE, U.S. Department of. The Department of State continued in 1945 its manifold activities directed, in the field of foreign relations, toward the defeat of this country's enemies and the establishment of a secure and just peace.

The Department made a substantial contribution to the success of the United Nations Conference on International Organization which met at San Francisco from April 25 to June 26, 1945 and of the Inter-American Conference on Problems of War and Peace which met at Mexico City from Feb. 21 to Mar. 8. Officials participated in the Crimea and Berlin Conferences of the heads of government, and the London and Moscow meetings of the Council of Foreign Ministers.

James F. Byrnes took the oath of office as Secretary of State on July 3, succeeding Edward R. Stettinius, Jr., whose resignation was accepted by the President on June 27. Mr. Stettinius was appointed as Representative of the United States to the United Nations Organization. Dean Acheson replaced Joseph C. Grew as Under Secretary, and Benjamin V. Cohen was appointed Counselor in the Department. James C. Dunn and William L. Clayton continued as Assistant Secretaries of State, and Spruille Braden and William Benton replaced Nelson A. Rockefeller and Archibald MacLeish. Frank McCarthy replaced Julius C. Holmes but later resigned, and the vacancy thus created was filled by the transfer to that post of Donald S. Russell who had first been appointed as Assistant Secretary to fill the post left vacant by the promotion of Dean Acheson.

During the year many of the higher officers of the Department served on international and inter-

departmental commissions, committees, and boards concerned with the conduct of the war and the study of postwar problems. In the field of foreign relations the Department coordinated the many complex war activities of other agencies, and, in large part, it furnished the means of carrying out these activities so far as they required action in foreign countries by the Foreign Service of the United States. The Foreign Service offices necessarily became the headquarters or centers of American wartime activity in the countries with which the United States maintained diplomatic relations.

A number of Offices were created in the Department during the year to meet the expanding needs caused by the war situation and later by the termination of hostilities and the inclusion in the Department of certain functions performed by outside war agencies. On Apr. 1 the Office of the Foreign Service was expanded and reorganized. Subsequently an Interim International Information Service assumed many of the duties of the Office of War Information and the Office of Inter-American Affairs; an Interim Foreign Economic and Liquidation Service took over some of the functions of the Foreign Economic Administration and the Office of the Army-Navy Liquidation Commissioner; an Interim Research and Intelligence Service, under a Special Assistant to the Secretary, assumed a number of the responsibilities of the Office of Strategic Services.

The organization of the Department as of Dec. 15, 1945, consisted of the following offices, divisions, et cetera:

1. The Secretary of State, the Under Secretary of State, a Counselor, six Assistant Secretaries of State, a Legal Adviser, six Special Assistants to the Secretary, five Assistants to the Secretary, a Secretary's Staff Committee, a Coordinating Committee, and a Central Secretariat for these committees.

2. The Assistant Secretary for economic affairs administers five offices, namely, International Trade Policy, Financial and Development Policy, Transport and Communications Policy, Economic Security Policy, and Foreign Liquidation, with fourteen divisions which include: War Areas Economic Division, International Resources Division, Petroleum Division, Division of Commercial Policy, Division of International Labor, Social, and Health Affairs, Division of Financial Affairs, Division of Investment and Economic Development, Division of Lend-Lease and Surplus War Property Affairs, Aviation Division, Shipping Division, Telecommunications Division, Division of Economic Security Controls, Division of German and Austrian Economic Affairs, and Division of Japanese and Korean Economic Affairs.

3. The Assistant Secretary for European, Far Eastern, Near Eastern, and African affairs administers the Office of European Affairs, the Office of Far Eastern Affairs, and the Office of Near Eastern and African Affairs, and their component divisions which include: Division of British Commonwealth Affairs, Division of Eastern European Affairs, Division of Central European Affairs, Division of Southern European Affairs, Division of Northern European Affairs, Division of Western European Affairs, Division of Chinese Affairs, Division of Japanese Affairs, Division of Southeast Asian Affairs, Division of Philippine Affairs, Division of Near Eastern Affairs, Division of Middle Eastern Affairs, and Division of African Affairs.

4. The Assistant Secretary for administration is responsible for four offices, namely, Office of the Foreign Service, Office of Departmental Administration, Office of Controls, and Office of Budget

and Finance with twenty divisions, namely: Division of Foreign Service Planning, Division of Foreign Service Personnel, Division of Training Services, Division of Foreign Reporting Services, Division of Foreign Service Administration, Division of Foreign Buildings Operations, Division of Management Planning, Division of Departmental Personnel, Division of Central Services, Division of Cryptography, Division of Coordination and Review, Division of Protocol, Division of International Conferences, Division of Communications and Records, Passport Division, Visa Division, Special Projects Division, Division of Foreign Activity Correlation, Division of Budget, and Division of Finance.

5. The Assistant Secretary for public and cultural relations administers the Office of Public Affairs and the Office of International Information and Cultural Affairs with their six divisions, namely: Division of Public Liaison, Division of Research and Publication, Division of Geography and Cartography, Division of Cultural Cooperation, International Information Division, and Central Translating Division.

6. The Assistant Secretary for American Republic Affairs administers the Office of American Republic Affairs, which has six divisions, including: Division of Mexican Affairs, Division of Caribbean and Central American Affairs, Division of Brazilian Affairs, Division of River Plate Affairs, Division of North and West Coast Affairs, and Division of American Republics Analysis and Liaison.

7. The Assistant Secretary for Congressional relations bears responsibility in the field named. There is at present no incumbent to this post.

8. The Legal Adviser has responsibility for the legal affairs of the Department.

9. The Special Assistant to the Secretary for international organization and security affairs administers the Office of Special Political Affairs, which includes three divisions, namely: Division of International Organization Affairs, Division of International Security Affairs, and Division of Dependent Area Affairs.

E. WILDER SPAULDING.

STATE LEGISLATION. With one exception every state legislature met in 1945. Mississippi was the only State whose legislature did not convene during the year. Forty-four legislatures met in regular session and three other States held special sessions.

In the twenty-four States where there are no Constitutional limitations on the length of legislative sessions the tendency was for the legislatures to run somewhat longer than previous sessions held during the war period. This was true in at least fifteen States. The ending of the European War coming as it did in the middle of numerous legislative sessions may have been responsible for their continuing longer than usual. Obviously the termination of the European War was an incentive for the States to prepare for the returning veteran and for the period of reconversion and business uncertainty that many predicted would follow.

There was no diminution in the volume of legislation considered in 1945 for incomplete tabulations indicated that the number of new enactments would approximate 18,000, which is about the number of enactments during peacetime. The total number of bills introduced also will equal or exceed the usual average of 60,000 which are ordinarily brought to the attention of the legislatures in the years when most of them are in session.

Even more time than usual was given over to a consideration of financial problems due to the fact that many States were faced with the pleasant problem of what to do with large surpluses that

had accumulated due to increased revenues and decreased expenditures and payrolls. Almost without exception the States continued to follow the policy which they adopted at the beginning of the War, to assist in the anti-inflation program; namely, to reduce over-all debt, invest surpluses in war bonds, and reduce expenditures whenever possible. As a result of the state legislatures following such a policy, the States at the end of 1945 had reduced their over-all indebtedness by more than one-third; they had invested nearly \$6 billion in government war bonds, and had set aside over \$7 billion for unemployment compensation benefits. Budgets were balanced and there was not a State that did not have a substantial cash balance at the end of 1945.

War Legislation. Much attention was paid by the 1945 legislatures to the problem of caring for the veteran and a summary of veterans' legislation is included at a later place in this article. The program of suggested war legislation developed by the Department of Justice and various federal war agencies in cooperation with the Council of State Governments continued to receive favorable attention. The unanimity of action by the States in approving such war legislation set a record for enactment of uniform legislation in the nation's history.

These proposals included such matters as five Acts simplifying various legal processes relating to the protection of the armed forces and their property; the Airport Condemnation and Airport Zoning Acts having to do with the development of both wartime and civil aeronautics; legislation relating to Enrichment of White Bread and Flour and a Flour and Meal Container Act, both designed to place in state hands a control which had been established under federal emergency war powers; a Second Injury Fund Act, designed to facilitate the employment of returning disabled veterans and other handicapped persons; a Veterans' Service Officer Act, establishing in the State a mechanism for the dissemination to veterans of information as to rights and benefits; a Purchase of Federal Surpluses Act designed to aid the States and their political subdivisions in the purchase of federal surpluses and a State Plane Co-ordinates Act. These Acts received wide acceptance by both the 1944 and 1945 sessions.

The Flour and Meal Container Act was adopted in some 30 States; Enrichment of White Bread and Flour legislation adopted in 18 States; Second Injury Fund legislation, adopted in 32 States; State Plane Co-ordinate Systems Act in 19 States. Of the five proposals relating to the personal legal affairs of Servicemen, the Evidence of Death or Other Status of Missing Persons Act was adopted in 23 States; the Proof of Wills legislation was adopted in 28 States; Conservators for Missing Personnel Act, 17 States; Powers of Attorney, 29 States; and the Purchase of Federal Surpluses Act was adopted in 34 States. The Veterans' Service Officer legislation which was adopted in some 36 States is discussed in more detail in the section on veterans' legislation. Airport legislation was adopted in a large number of States and this legislation is discussed in more detail under aviation legislation.

Other major subjects which received attention during the 1945 sessions and which will be summarized here included aviation, labor, motor vehicles, public welfare, taxation and finance, uniform laws and interstate relations, and veterans.

Aviation. The fact that pending Congressional airport aid legislation requires state cooperation and that the Civil Aeronautics Administration has encouraged the States to aid in the development

and regulation of aviation led to the enactment of new or the recodification of existing aeronautical laws in more than thirty States. Aviation departments or commissions were established in nearly a dozen jurisdictions with the result that at the end of 1945, 44 States had agencies equipped to further the development of aviation and to participate in a federal aid airport program. Municipalities, by legislation, were authorized to own, construct or operate airports in Arkansas, Florida, Minnesota, Nebraska, Pennsylvania, and Washington. Under such legislation, cities generally would have authority to operate air navigation facilities and to issue bonds and levy taxes for the support of airports. A model airport condemnation proceeding was approved by six States and in addition eleven States approved a model airport zoning act which would give political subdivisions of a State power to prevent obstruction of public airport approaches by regulating the use of property near airports. The majority of the States now have such legislation.

Housing. Legislation authorizing municipalities to eliminate blighted areas and to assemble land, public housing or other city projects was enacted by Arkansas, California, Colorado, Connecticut, Florida, Illinois, Indiana, Minnesota, New York, Pennsylvania and Tennessee. The new California law permits cities to condemn blighted areas by eminent domain and to secure their rebuilding by private enterprise. Pennsylvania cities were authorized to create redevelopment authorities and to establish housing projects. In Minnesota the legislature provided for the eradication of slum areas through the formation of neighborhood redevelopment corporations. California, Georgia, Illinois, Nevada, New York, Pennsylvania, Tennessee, and Washington enacted housing legislation. Illinois and Pennsylvania authorized insurance companies to invest up to 10 percent of their assets in housing either by operation of housing projects or through loans to housing agencies.

Labor. Labor legislation in 1945 was noted for the number of restrictive bills that were introduced, despite the fact that few became law. As is customary in a subject as controversial as labor, numerous efforts were made to enact stringent regulatory legislation or to penalize the activities of labor unions in other ways. With very few exceptions, legislation of this type was killed in committee.

Restrictive bills abolishing the closed shop, providing for the strict regulation of unions and right-to-work proposals which were introduced in numerous States, particularly in the South and Southwest, were defeated. However, South Dakota approved a right-to-work amendment and provided for submission of such to a constitutional convention. Labor organizations have bitterly opposed such amendments which in the past have prevailed in Florida and Arkansas.

Legislation aimed at incorporating principles of the Federal Wagner Act were introduced in a number of States and a proposal of this type was finally enacted in Connecticut.

On the positive side from the standpoint of labor, practically all of the States enacted new or amendatory legislation increasing or broadening workmen's compensation. In Colorado, Pennsylvania and New York comprehensive revisions and improvements were made in workmen's compensation laws.

Many constructive improvements were made in numerous health and safety statutes affecting labor, particularly those covering such hazardous occupations as mining and transportation. Bills establish-

ing separate departments of labor or industry were considered in Arizona and Indiana while Montana authorized consideration of a constitutional amendment for this purpose at the next election. The establishment of a division of migrant labor in the Department of Labor was approved in New Jersey. Standards for the regulation of such camps were set up in New Jersey and Utah.

A new arbitration service was established in North Carolina and a division of industrial hygiene was created in Tennessee. Minimum wage and hour laws were considered in many States and improved in several. Child labor standards were raised in Illinois, Maine, and Rhode Island. A proposal was approved in Minnesota outlawing strikes, boycotts, or picketing during the certification period of a collective bargaining agency. A highly controversial "full employment" bill modeled on the federal proposal was defeated in California.

Study commissions were created in Michigan to study child labor conditions; in Alabama to revise its building code; and New York continued its Joint Legislative Committee on Industrial and Labor Conditions with a \$90,000 appropriation. An appropriation of \$200,000 was made by New York to its new School of Industrial and Labor Relations at Cornell University.

Motor Vehicles. During the War, the States rigidly adhered to the Governors' War Emergency standards governing the weight and dimensions of motor trucks traveling in interstate commerce. Reciprocity in regard to motor vehicle license plates and registration fees for war workers was also extended generally by the States. As a result, so-called interstate trade barriers in the motor transport field, particularly those obstructing the movement of war goods across state lines, were eliminated among the States. Wishing to continue these gains many state legislatures, stimulated by the motor carrier industry, increased size and weight limitations and extended reciprocal agreements applying to fees and taxes to other States. At least thirty-four States considered amendments to existing size and weight limitations. Arizona, California, Colorado, Delaware, Florida, Illinois, Iowa, Nebraska, North Carolina, North Dakota, New Hampshire, New York, Oregon, South Carolina, Tennessee, Texas, Vermont, Washington, Wisconsin, and Wyoming were among the States which generously increased or liberalized size and weight limitations or permit regulations covering motor trucks.

On the reciprocity front Arkansas, Indiana, Minnesota and South Carolina extended reciprocal favors to passenger vehicles for hire from other States and Wisconsin to war workers and members of the Armed Forces.

Legislation relating to motor vehicle registration was enacted in twenty-four States. Most of them increased present fees or required registration for such vehicles as station wagons, house trailers, cranes, and other "outsized" vehicles.

Almost every legislature in session in 1945 enacted measures for the regulation of carriers. Most of these acts were minor amendments of little general interest applying to such matters as ages of drivers, smoking in vehicles, regulation of taxicabs and truck rates. Minnesota established an interim committee to study truck rates and regulations and South Carolina authorized its Public Utilities Commission to appear in proceedings concerning railroad abandonments and extensions.

Motor vehicle safety responsibility acts were enacted in Georgia, Minnesota, Nebraska, and Pennsylvania and amendments to existing responsibility laws were put through in California, Indiana,

Maine, Maryland, New Hampshire, Oregon, and Wisconsin.

Laws providing for the licensing and regulation of dealers were put on the statute books of several States. On the Constitutional amendment front, Indiana, Maryland, Pennsylvania, Tennessee, and Texas passed measures referring amendments to the people prohibiting the diversion of highway user revenues to other purposes. Pennsylvania's amendment came up in 1945; Maryland and Texas will vote in 1946; and Indiana and Tennessee must be approved by their 1947 legislatures before they can be referred to the voters. Six States: Florida, New Jersey, Oklahoma, Pennsylvania, Washington, and Wisconsin enacted legislation making possible the diversion of highway revenues to other purposes.

Planning. Planning legislation was enacted by 14 States during the 1945 session. Arkansas, Minnesota, South Carolina, Rhode Island, Vermont, and Washington created State development and planning agencies. New York provided for the construction of erosion arresting structures on the Atlantic coast and enacted measures to assist the State and its localities to finance public works and highway plans and projects. Similar measures assisting local public works planning were enacted in California, Illinois, Indiana, Maryland, Michigan, New Jersey, Pennsylvania, and Washington. At the end of 1945 every State had set up some type of agency to handle postwar planning and reconversion problems.

A large volume of legislation affecting highway construction and enabling the States to participate in the Federal Aid Highway act of 1944 was also enacted during the year.

Public Welfare Legislation. Welfare legislation enacted in 1945 was aimed principally at preparing the States for the reconversion period and for social problems that might arise in the postwar years. As a result, a number of welfare administrations were reorganized and improved. New York, Illinois, Indiana, and Missouri were in the forefront of the States that acted on the welfare front.

As a result of Governor Thomas E. Dewey's Interdepartmental Committee on Delinquency, eight bills were enacted by the New York Legislature covering such subjects as the prevention of delinquency, increased state facilities for the care of delinquents, and a greater flexibility in the use of State institutions in treating young offenders. In addition, the Temporary State Commission on Medical Care was continued and the Special Committee on Social Welfare of the New York Joint Legislative Committee on Interstate Cooperation (the Ostertag Committee) carried on its comprehensive study of administration of social services in the State and made major recommendations for integrating welfare services at the local and county level of government.

Over 160 social welfare laws were enacted in Illinois with the result that many improvements were made in the statutes covering child welfare, care of the sick, public aid, and the school program. Indiana completely reorganized and strengthened its welfare structure and the Missouri Legislature gave its attention to putting into effect welfare changes authorized by the Constitutional Convention in that State whose work was approved by the voters in November. Vermont created a policy determining board to the Department of Welfare and Wisconsin, in addition to recodifying its public assistance laws, also integrated welfare services previously handled by private agencies with the county welfare departments.

Special studies of problems of old age assistance were authorized in Ohio and Illinois. Old age assistance was increased in Delaware, North Carolina, South Dakota, Utah, Vermont, Washington, and Wyoming and ceilings or limitations on the amount recipients may earn or receive were lifted in many States. At the same time, aid to dependent children programs were lifted in many States. In addition, aid to dependent children programs were broadened and increased in Iowa, Maryland, Minnesota, Nebraska, and New York.

A number of States modified restrictive residence or settlement requirements for public aid with Pennsylvania eliminating settlement restrictions entirely on a reciprocal basis with other States.

Child welfare study commissions of one kind or another were initiated in Connecticut, Kansas, Missouri, Oregon, and Washington.

A State Youth Commission was established in New York with authority to help finance aid to municipalities for their youth guidance activities. The Connecticut and Oregon investigations will also give particular attention to developing programs for the prevention of juvenile delinquency. North Carolina authorized the establishment of juvenile courts in cities of 10,000 or more.

Other States that enacted legislation pertaining to the improved care of delinquents and the prevention of delinquency were, in addition to those mentioned: Alabama, Indiana, Minnesota, Montana, Oregon, and Wisconsin.

Health and Medical Care. Approximately thirty States by legislative action or governor's order initiated state-wide studies of hospital needs. Model legislation sponsored by the Council of State Governments was responsible for the comprehensive surveys carried on by some twenty States. As a result of such action the majority of the States will be prepared for participation in the nation-wide hospital construction program which is to be financed on a federal-state grants-in-aid basis.

In addition, Maryland initiated a program of medical care for the indigent in the State, while Michigan provided clinics and hospitals for the care of indigents in certain counties. A state medical center to be administered by the State University was established in North Dakota, and special steps were taken to extend medical care to the poor and chronically ill in Illinois, North Carolina, and North Dakota. A proposed over-all state health insurance plan failed to pass in California although, as a result of legislation enacted in 1945, thirty-three States have enacted legislation governing non-profit hospital plans. Special efforts to care for the mentally-ill were taken in Minnesota, North Carolina, Ohio, Vermont and Wisconsin where added facilities were provided.

On the recreational side, North Carolina was the first State to set up a special recreation commission. In addition, fourteen States by legislation established regional planning machinery having to do with physical construction and the conservation of natural resources in their respective areas.

Unemployment Compensation. To prepare for post-war unemployment, to relieve hardship and to correct existing deficiencies, many of the States improved their unemployment compensation systems in 1945. Twenty-five States increased maximum insurance benefits and twenty-eight lengthened maximum duration of benefits. Maryland eliminated the waiting period between job dismissal and benefit payments and six other States reduced their waiting period. A third of the States extended coverage to persons working for an employer of one or more.

At the end of the legislative year the States had so amended their unemployment compensation systems that:

(1) weekly benefit maximums of \$20 or more could be paid in twenty-seven States in which approximately 78 percent of covered workers were employed;

(2) maximum benefit duration of twenty or more weeks prevail in thirty-three States in which 80 percent of all covered workers are employed.

Fair Employment Practice Acts. Fair employment practice acts modeled on the proposed Congressional act were adopted in Indiana, New Jersey, New York, and Wisconsin. Similar legislation was considered by sixteen other States but failed of enactment.

Taxation.* Relatively little comprehensive tax legislation was enacted in 1945. In general the legislatures, when they imposed taxes, levied the "painless" variety that is on such commodities as liquor, cigarettes and gasoline. Higher liquor taxes were put on in ten States: Alabama, Arkansas, Florida, Indiana, Massachusetts, Michigan, North Carolina, South Carolina, Utah, and Vermont. Oklahoma, a dry state, raised the tax on non-intoxicating beverages from \$2 per barrel to \$7 per barrel. Beer taxes were increased in Alabama, Florida, Indiana, Nevada, North Carolina, South Carolina and Utah. Increases ranged from $\frac{1}{2}$ cent on each 12 fluid ounces in Alabama to 4 cents per pint in Florida. Additional wine taxes were imposed by Florida, Indiana, Massachusetts, Michigan, Nevada, and North Carolina, while Arkansas, Florida, Massachusetts, Michigan, Nevada, and Vermont increased taxes on spirituous liquor. The 10 percent emergency state tax on liquor was extended in Pennsylvania until June 1, 1947; the \$1.50 per gallon additional liquor tax in New York was extended to March 31, 1946, and the temporary additional excise on alcoholic beverages was continued in Massachusetts until June 30, 1947. License requirements were made more stringent in California, North Carolina, and South Carolina and fees were also increased in the latter State.

The tax on cigarettes was extended in Massachusetts, New York, Ohio, Pennsylvania and Wisconsin. Increases were put on in Alabama, Connecticut, Massachusetts and new laws imposing 2 cents and 4 cents per package respectively were enacted in Idaho and Florida. Maine put a \$1 license fee on sub-jobbers and Wisconsin made its use tax applicable to tobacco.

Gasoline. Emergency wartime rates were continued in Florida, Massachusetts, New York, Ohio, Pennsylvania and West Virginia. By reason of a 2 cents per gallon increase, Oklahoma, with an over-all tax of 7 $\frac{1}{2}$ cents assesses the highest gas tax in the country. One cent a gallon increases were put through in Idaho, Iowa and Kansas. Numerous technical changes relating to exemptions, refunds and administration were made in Connecticut, Delaware, Florida, Georgia, Indiana, Maine, Maryland, Minnesota, Montana, Ohio, Oregon, South Carolina, South Dakota, Utah, and Wyoming.

An aviation gas tax of 4 cents per gallon with certain refunds for large purchasers (airlines) was enacted in Alabama, Minnesota, Oklahoma, Nebraska, Pennsylvania, and Wisconsin.

Numerous changes in other classes of taxes were made during the year. The following paragraphs

summarize the more important enactments under their different classifications:

Income. The outstanding change in income tax legislation was New York's 25 percent reduction in the personal income and net capital gains taxes. California also effected reductions by increasing the exemptions for personal income tax from \$2,000 to \$3,000 for single persons and from \$3,500 to \$4,500 for married persons. The legislature also extended the 15 percent credit on the amount of taxes to be paid to taxable years beginning before January 1, 1947, on personal income and corporation income taxes. Corporation income taxes were also reduced. Iowa, by providing "that 50 percent of the tax imposed on individual income shall be credited to the taxpayer and 50 percent shall be accepted in full liability for the tax due for the years 1944 and 1945, payable in the years 1945 and 1946 respectively."

Amendments of various kinds were made in state income tax laws in order to bring about substantial conformity with the federal income tax law. Other amendments aimed at correcting inequities in existing law and providing for administrative changes were adopted in Alabama, California, Colorado, Connecticut, Delaware, Kansas, Maryland, Massachusetts, Minnesota, New York, North Carolina, North Dakota, Oregon, Pennsylvania, and Wisconsin.

Changes in the definition of "resident" were made in Delaware and amendments relating to payment of taxes by non-residents on income earned within the State as well as credit for taxes paid to another State were made in Massachusetts, New York, and Vermont.

As in recent years a number of States continued the practice of exempting from taxation the service, mustering-out, and allotment pay of those in the Armed Services.

Sales Taxes. Alabama broadened the base of its use tax to include tangible personal property purchased for use within the State. Colorado discontinued the use of tax tokens and abolished its controversial service tax which licensed and taxed many business occupations. All emergency sales and use taxes were extended for New York City by the legislature in that State and Indiana reorganized its Gross Income Tax Division as well as broadened its law. The North Dakota sales tax law was also rewritten. Minor changes in definition and administrative practices were made by most of the twenty-five States which levy a general sales tax and whose legislatures met in 1945.

Miscellaneous Taxes. As in the case of other taxes, emergency rates on utilities were extended by Massachusetts, New York, Ohio, Pennsylvania, and Rhode Island and property taxes on airlines were enacted in Minnesota and Wisconsin. Numerous technical amendments were made in the field of property tax legislation, but none were of national significance. Modifications in the tax rates on stock transfers were made in Pennsylvania and New York and the additional emergency tax was repealed in the latter State. A tax of 2 cents per share was enacted with certain exceptions. A new severance tax on timber and forest products was enacted in Alabama. An Oil and Gas Conservation Commission was created in Georgia and a Board of Conservation in Florida.

Insurance Taxation and Regulation. The Supreme Court's decision in the Southeastern Underwriters case holding that the insurance business is commerce and that that part of it which is conducted across state lines is interstate commerce and thus subject to federal statutes, led many States to

* For more detailed information see excellent tabulation in *Taxes* published by the Commerce Clearing House of Chicago.

amend their insurance codes in order to eliminate discriminatory taxes and retaliatory provisions of one kind and another against companies in other States. The enactment of Public Law 15 by Congress in March, 1945, following the Supreme Court decision gave the States until January 1, 1948, to put their insurance statutes in order, particularly those laws which violated federal anti-trust and fair trade practice acts. This double-barrelled action on the part of the federal government to eliminate abuses in the insurance business itself and to improve state regulatory controls resulted in nearly thirty States' either changing their insurance tax provisions, rewriting their insurance codes, or establishing interim commissions to study the problem in preparation for the legislative sessions of 1947. Tax changes, which were usually in the direction of removing retaliation features of present law or of equalizing taxes between foreign and domestic companies, were enacted in Alabama, Arizona, Arkansas, California, Connecticut, Delaware, Florida, Georgia, Iowa, Maine, Maryland, Massachusetts, Missouri, New Hampshire, New Jersey, New Mexico, North Carolina, Oklahoma, Oregon, South Dakota, Tennessee, Texas, Washington, and West Virginia. Approximately a dozen States created interim study commissions to investigate the subject.

Veterans. As a result of legislation passed in 1945 every State has a veterans' service agency. In many instances, the States enacted legislation similar to the "State Veterans' Service Officer Act" contained in the program of suggested war legislation of the Drafting Committee of the Council of State Governments. States that established new departments or reorganized existing ones in 1945 were Alabama, Arkansas, California, Colorado, Connecticut, Florida, Georgia, Illinois, Indiana, Kansas, Maryland, Massachusetts, Montana, Nebraska, New York, North Carolina, North Dakota, Oklahoma, Oregon, Rhode Island, Tennessee, Vermont, Washington, West Virginia, and Wisconsin. Many other States took such action in their 1943 or 1944 sessions. In general, the veterans' agencies serve as informational clearinghouses for veterans and their families. Veterans are kept advised of the existence or availability of (1) educational facilities, (2) health, medical, rehabilitation and housing facilities and services, (3) employment and reemployment services, (4) provisions of federal, state, and local laws of benefit to veterans and their families. In addition, the state agencies (1) assist veterans and their families and dependents in the presentation, proof and establishment of such claims and other benefits as they may have under law, and (2) cooperate with all governmental and private agencies in securing services or any benefits to veterans and their families.

In numerous States far more extensive services are offered the veteran. Appropriations for the operation of such departments run from an average of approximately \$20,000 in the smaller States to \$2,800,000 annually in Illinois and New York. Among the larger general appropriations was that of Michigan which set aside a \$50,000,000 postwar reserve fund for benefit of returning servicemen, their widows and dependents. New Hampshire made a general appropriation of \$4,000,000 to pay a bonus to soldiers of World War II. Other States authorizing a bonus payment for World War II were Massachusetts and Missouri. New Hampshire in 1943 and Vermont in 1942 had previously approved bonuses. After World War I, twenty-one States provided bonuses. In the larger

States, field staffs and district offices have generally been established.

Every legislature convening in 1945 amended existing law or put through new acts providing rights, benefits and privileges to veterans, servicemen, their dependents and their organizations. The principal purpose of the new legislation had to do with the rehabilitation of veterans of World War II. Legislation to amend prior laws covers such matters as (1) service to veterans in prosecuting their claims against the federal government, (2) hospital and domiciliary care in state institutions, (3) economic grants for relief, (4) employment preferences and preservation of job rights, (5) land settlement benefits, (6) occupational and tax exemptions. New legislation included such subjects as (1) bonuses, (2) educational grants to supplement federal aid where need was apparent, (3) additional educational opportunities and training courses in state institutions, (4) loans for rehabilitation, education or for the purchase of homes, farms, or business.

Uniform Laws and Interstate Relations. When the Oklahoma legislature ratified the Interstate Parole and Probation Compact in 1945 it became the thirty-ninth State to approve this highly successful legal and administrative device for the interchange of parolees and probationers among the States.

The Connecticut and Florida legislatures ratified the Atlantic States Marine Fisheries Compact during the year with the result that fourteen States, all but North Carolina, along the Atlantic seaboard are participating in the program of the commission. As a part of its work model legislation providing for uniform regulations with respect to various species of fish was approved by the different States along the Atlantic Coast in 1945. As a result of the activities of the commission, long-standing confusion and a conflict in the laws governing fishing regulations of the States bordering on the Atlantic have been alleviated.

The development of uniform legislation and interstate cooperation advanced on the conservation and pollution abatement front with the ratification by the Pennsylvania legislature of both the Potomac River Basin Compact and the Ohio River Valley Sanitation Compact. In ratifying the Potomac Compact, Pennsylvania joins with Maryland, Virginia, West Virginia, and the District of Columbia in controlling pollution and developing the water resources of the Potomac River. Pennsylvania also joins with Illinois, Indiana, New York, Ohio, Tennessee, and West Virginia in the Ohio River Compact.

In 1945, a total of 83 Uniform and Model Acts were introduced and 45 were adopted in 1945 as compared with 162 introduced—80 enacted in 1943, and 201 introduced—80 enacted in 1941. These uniform acts were developed by the National Conference of Commissioners on Uniform State Laws and by the Council of State Governments. During the fifty-three years of its existence the Uniform Law Commissioners have drafted and approved nearly 100 uniform proposals and today some fifty uniform acts are currently being recommended to the state legislatures.

Among those uniform acts which received favorable attention in 1945 were the Uniform Veterans' Guardianship Act and the Stock Transfer Act which were approved by four States and the Trusts Receipts Act and the Acknowledgment Amendment Act were approved by three States.

Conclusion. With the European War ending during the middle of many of the legislative sessions,

a considerable number of States requested Attorneys General or special committees to study the problem of when emergency war legislation should be terminated. Legislation which did not terminate with the cessation of hostilities will probably be ended by executive order or legislative resolution soon after the convening of the 1946 and 1947 sessions.

At least three or four thousand bills having to do with veterans' problems were introduced at the 1945 sessions. In addition, a number of special sessions were held to consider veterans problems. There is no doubt that legislative sessions for many years to come will devote a considerable portion of their time to veterans' affairs if we are to judge from the pace set by the 1945 sessions. Emergency war legislation which occupied a large part of the time of the legislators from 1941 to 1945 will cease to be of importance to the legislators who will be more concerned with peacetime and routine matters such as taxation and finance, housing, education, motor vehicles, law enforcement, and public welfare. By and large the record made by the States during the wartime years was an auspicious one and by comparison much better than that made during World War I. In other words, the quality of individual legislators continues to improve as does their over-all product if we judge by the accomplishments of 1945.

HUBERT R. GALLAGHER.

STATES OF THE U.S. Additional information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles: AGRICULTURE, MARRIAGE STATISTICS, MINERAL PRODUCTION, ROADS AND STREETS, SCHOOLS, SOCIAL SECURITY BOARD, TAXATION, UNIVERSITIES, VITAL STATISTICS, ELECTIONS, U.S., REPRESENTATIVES AND SENATE, AND STATE LEGISLATION. (See table on page 591.)

SUEZ CANAL. A sea-level canal across the Isthmus of Suez, connecting the Mediterranean and the Red Sea. Operated by the French-controlled Suez Canal Company, which holds a concession (expires Nov. 17, 1968) from the Egyptian Government, the canal is normally the main route between maritime Europe and the ports of the Indian and western Pacific oceans.

Cargo traffic on the canal declined from the peak of 36,129,101 net registered tons carried by ships in the calendar year 1937 to 13,092,615 tons carried in 1940, 8,263,000 tons in 1941 and 7,028,000 tons in 1942. The traffic for 1945 was expected to reach nearly 75 percent of the average annual prewar traffic.

SVALBARD. An arctic Archipelago (10° to 35° E. and 74° to 81° N.) owned by Norway. The principal islands are West Spitsbergen (or Mainland), North East Land, Prince Charles Foreland, Edge Island, Barents Land, King Karl's Land, Hope Island, and Bear Island (69 sq. mi.). Total area, 24,294 square miles. Population on Jan 1, 1940, about 1,000. Green Harbor (capital), New Aalesund, Coles Bay, Longyearbyen, and Braganza Bay were the main settlements, all on the western coast of West Spitsbergen. Coal was the chief product (627,000 metric tons in 1938 and 400,000 in 1940). Iron, asbestos, and gypsum exist. Most of the inhabitants were evacuated during September, 1941. The archipelago commands the route over which Allied war supplies were sent to the Russian port of Murmansk during World War II.

SWEDEN. A constitutional monarchy of Scandinavia. Sovereign, Gustav V, who succeeded to the throne on Dec. 8, 1907. Area, 173,398 square miles. The estimated population on Jan. 1, 1945, was 6,597,348 (6,250,500 at the 1935 census). Vital statistics (rate per 1,000) for 1943: births 19.3, deaths 10.1, marriages 9.5, infant mortality 29. Chief cities (with estimated population figures for 1944): Stockholm (capital) 635,534, Göteborg 290,486, Malmö 163,213, Norrköping 73,353, Hålsingborg 64,087.

Education and Religion. Education in the public elementary schools is free and compulsory. Children not attending schools under government supervision must furnish proof of having been privately educated. In 1941 the elementary schools had 538,304 students. The 214 secondary schools, in 1943, had a total 66,313 students; in addition there were military, navigation, agriculture, veterinary, and other special schools. In 1943 the universities at Göteborg, Lund, Stockholm, and Uppsala had a total of 8,525 students enrolled. The majority (90 percent) of the population adhere to the Lutheran Protestant Church. Protestant Dissenters, Roman Catholics, Jews, and some others make up the minority.

Foreign Trade. In 1945 Sweden's imports were valued at 1,087,000,000 kronor (1,664,400,000 kronor in 1944); exports, 1,724,000,000 kronor (830,000,000 kronor). The principal import and export commodities were animal and vegetable products; minerals and metals; chemical products, drugs, dyes, lacquers, soaps, and fertilizers; hides and skins, rubber, textile materials; wood products, pulp, paper, etc.; machinery, transportation equipment, and instruments.

Finance. Budget estimates (for the fiscal year to June 30, 1946): revenue 3,208,988,000 kronor (3,186,400,000 kronor for 1944-45); expenditure 3,169,000,000 kronor (4,416,000,000 kronor). In 1943-44 actual revenue totaled 3,106,200,000 kronor; actual expenditure, 4,072,000,000 kronor. Expenditure (included in the foregoing figures) for national defense amounted to 2,030,000,000 kronor in the 1944-45 budget and to 2,122,000,000 kronor in 1943-44. The public debt increased from 2,634,000,000 kronor on June 30, 1939, to 11,550,000,000 kronor on Sept. 30, 1945. Currency notes in circulation on Sept. 30, 1945, totaled 2,567,000,000 kronor. The exchange rate of the krona from 1941-1945 was \$0.2385; 16.90 kronor = £1 sterling.

Production. The bread grain crop (wheat and rye) for 1944 totaled 899,500 metric tons. Feed grain crops (barley and oats) for 1944 totaled 1,413,000 metric tons. The sugar beet crop in 1944 was 1,803,000 metric tons (1,868,257 in 1943) harvested from 136,000 acres. Potatoes harvested in 1944 totaled 1,448,700 metric tons. Among the other important crops are hay, fodder, roots, peas, beans, and vetches. Livestock (1944 census): 2,834,177 cattle, 1,041,074 swine, 599,490 horses, 551,830 sheep, and 9,055,916 chickens.

Mineral and metallurgical output during 1945 included coal, iron ore, pig iron, ferro-alloys, steel ingots, manganese ore, tungsten, copper, zinc, aluminum, peat, and shale oil. Ball bearings, cream separators, lighthouse apparatus, telephone supplies, motors, and many kinds of electrical machinery are produced by the metallurgical industries. The public forests cover an area of 30,000 square miles. Wood-pulp output in 1943 totaled 1,240,000 metric tons. Other important industries are the manufacture of porcelain, glass, and textiles. In 1941 there were 18,757 industrial fac-

* To fill unexpired term of Charles Gossett, Nov., 1945. * Succeeded E. P. Carville, who resigned July 31, 1946. * Succeeded J. Howard McGrath, who resigned to become Solicitor General of U.S. Jan. 2, 1945. * Succeeded Olan D. Johnston Jan. 2, 1945. * Administered by Committee appointed by the President, confirmed by the Senate, and consisting of John Russell Young, Guy Mason, and Col. Charles W. Kutz, C.E.

ories, with a total of 550,000 employees; total power used amounted to 6,463,673 effective horsepower.

Transportation. The roads of Sweden, on Jan. 1, 1943, totaled 55,550 miles. At the end of 1943 the railroads totaled 10,380 miles (including 3,243 miles of electrified line), of which 6,733 miles were owned by the state. Commercial airlines link the chief cities and maintain services, together with foreign companies, with nearby foreign countries. The Swedish mercantile marine, on July 1, 1944, comprised 2,107 ships aggregating 1,475,348 gross tons.

Government. The Constitution of 1809, as subsequently amended, vested executive power in a hereditary King, acting under the advice of a Council of State (Cabinet), which is responsible to the Diet or Riksdag. The Upper Chamber of the Riksdag has 150 members, one-eighth of whom are elected annually by provincial and city councils; the Lower Chamber has 230 members, elected by direct male and female suffrage for four years. Party strength in the Lower Chamber, as a result of the general election of Sept. 17, 1944: Social-Democrats 115, Conservatives 39, Agrarians 35, People's Party (Liberals) 26, Communists 15.

Events 1945. After five years of skilful maneuvering between two warring blocs surrounding her on all sides, Sweden, in the early months of 1945, came within an ace of being drawn into the final phase of the war. In previous years, Sweden's neutrality had been jeopardized mainly by German demands and occasionally by Allied counter-pressure; this time, internal forces were striving for a last-hour belligerency.

Some of these forces, as in the case of Turkey, were prompted solely by considerations of national self-interest. They realized that Germany irrevocably had lost the war: hence Sweden stood to risk little and gain much by casting in her lot with the Allies at the last moment.

These opportunists, however, were decidedly in a minority. By far more numerous were those who, incensed at the Germans' apparent determination to fight it out to the last in Norway, sought to rescue the sister nation from the double threat of starvation and bloodshed. By that time, Germany had been so weakened on all fronts that even a comparatively small, but extremely well trained and equipped force like the Swedish Army would have sufficed to chase the Germans out of Norway.

If Sweden had wanted to join the war against Germany, she would not have needed to look around for pretexts. Indeed, the Nazis, already confronted with insuperable odds, continued needlessly to provoke their last friendly neighbors.

Disregarding repeated Swedish protests, German V-installations on Bornholm and in Norway went on, throughout the first quarter of 1945, firing robot bombs and rockets across Swedish territory. Nazi airmen still engaged Swedish patrol planes guarding that country's neutrality and on April 3 a Swedish pursuit plane was downed and its pilot killed by a German fighter.

Most important of all, the Germans' revived Skagerrak blockade halted the infrequent safe-conduct ships that had been carrying on a semblance of Swedish foreign trade. As Foreign Minister Christian Guenther put it in an address at Lund, early in February, "Sweden today is more completely isolated from world trade than ever before."

Thus, when the Norwegian Government-in-exile in March and April made repeated appeals to

Sweden to mobilize and keep troops ready along the border, the atmosphere for such a move was more favorable than ever before. In the press and in the Riksdag, too, the interventionists showed greater strength than they had ever had.

The Swedish Government, however, was still opposed to any form of armed intervention. While frequently deploring and protesting the Nazi terror in Norway, it declined to go further. In this policy, it was backed by a vast majority of Riksdag members. In a secret session held on April 27, the House finally decided against the use of armed force to bring about a German surrender in Norway.

By that time the issue had already become largely academic as a result of the negotiations conducted by Count Folke Bernadotte of Sweden with Himmler and other high Nazi officials. These talks, which were held mainly at Luebeck, originally bore only on the treatment of Scandinavian deportees in Germany, but later they were extended to the question of a German surrender (see Germany).

According to Bernadotte, Himmler agreed in principle to surrender the German Army in Norway to Swedish forces, but this plan fell through when the Allies turned down the Nazi chief's conditional surrender offer.

Germany's collapse, and the advent of peace in Europe were celebrated throughout Sweden. On May 4, Premier Per Albin Hansson, on hearing that Denmark again was free, expressed his satisfaction and declared that he hoped this piece of news would soon be "followed by another of the same kind." King Gustav on May 7 broadcast a message of congratulations to Denmark and Norway and thanked his people for their help in keeping Sweden at peace. The Swedish Premier and the Foreign Minister also addressed the nation in the same sense.

Following the unconditional surrender of Germany, Sweden acted quickly to liquidate all Nazi agencies in the country. The German legation in Stockholm was taken over on May 8 and its personnel was interned for deportation, which was effected in August. All German propaganda agencies and so-called "cultural institutions" also were closed down.

Strike Hits Reconversion. The transition to peace was accompanied in Sweden by pretty much the same difficulties on the labor front that the United States went through several months later.

The Swedish trade unions, at the start of the year, were stronger than they had ever been before, with a total membership of 1,100,000. During the emergency, no major strike had occurred in accordance with a pledge given by the trade unions at the start of the war. Sweden, though it never entered the conflict, maintained a high degree of military preparedness throughout, and labor cooperated fully.

At the approach of peace however, and when it was clear that Sweden was out of danger, labor became restive. The powerful Metal Workers' Union, in particular, in which the Communists are strong, decided to fight it out on a wage-increase demand rejected by management. On Feb. 5, 125,000 members of the Metal Workers' Union went on strike; it was the greatest labor conflict in twenty-five years.

The strike lasted five months, until July 6, with a loss of 15,000,000 work-days. At first the employers welcomed the strike because of the difficulty of obtaining coal and other fuel for their plants, but after the trade lanes had been opened

again, they sought a settlement. This was made easier by a curious incident. As a result of the strike, Swedish deliveries of metal products to Finland had been halted. This development placed a great strain on Finland's reparations deliveries to Russia. In June, the Finnish Communist leader (and Minister of Interior) Yrjö Leino flew to Stockholm to plead with the Swedish metal workers to resume work. His efforts were at least partly successful.

The threat of another big strike, in the merchant marine, was averted by a last-hour settlement on June 9. If the strike had been called, it would have made impossible the great Swedish export offensive that developed in the latter part of the year, especially toward South America and other overseas countries. In June, July, and August Sweden signed trade pacts with half a dozen countries, especially Argentina and Poland. The latter promised to supply Sweden with 4,000,000 tons of badly needed coal during 1946, in exchange for iron ore and industrial products. On a smaller scale, Polish coal began to arrive in Sweden in August and deliveries increased steadily up to the end of the year, keeping Swedish industry going, but little was left for domestic users.

New Cabinet, Same Premier. With the passing of the emergency, the Government of National Union formed on December 13, 1939, lost its *raison d'être* and it resigned on July 31. Immediately Per Albin Hansson formed a new Cabinet, composed exclusively of members of his own Social-Democratic party. The most important effect of this change was the elimination of the controversial Foreign Minister Guenther who, throughout the war, had stood for a neutrality not unfriendly to the Germans. He was replaced by Professor Oesten Undén, a fervent spokesman of international cooperation. Since his appointment, Mr. Undén has already made several strong bids for admission of Sweden into the United Nations Organization.

Another important addition to the Cabinet was Prof. Gunnar Myrdal, internationally known economist, as Minister of Commerce. Along with the Finance Minister Ernst Wigforss, Prof. Myrdal heads the "New Deal" group in the new Government, which aims at partial socialization of Sweden's economy.

In September, Mr. Hansson was able to celebrate his thirteenth anniversary as Premier of Sweden (except for a three-months' interruption in 1936). He preceded Adolph Hitler as head of government, and outlasted him—a unique achievement in the annals of our time. Since the next general election in Sweden will not come before 1948, Mr. Hansson, whose party controls half the votes in the Lower Chamber of the Riksdag and has a clear majority in the Upper House, stands a good chance of adding a few more years to his record.

Sweden Eyes Russia. The disappearance of Germany from the map of Europe made it imperative for Sweden to reorient her political and economic life toward friendship with the power that had for centuries been Sweden's antagonist: Russia.

Such a shift of policy is not easy, but the Swedes worked hard at it throughout the year. The Russians, for their part, did not make things easier for the Swedes. Intermittently, the Soviet press renewed its attacks on Sweden and Moscow's diplomatic influence made itself felt repeatedly.

A few days after Germany's surrender, the Soviet Government protested in Stockholm, much in the same fashion hitherto used by Germany against an article on Stalin that had been published in the fortnightly review *Obs!* The Swedish

Government on May 18 conveyed its regrets over the incident to Moscow, but refused to take police action against the review on the grounds that such a procedure would be incompatible with the principles of press freedom. Moscow let it go at that, except for a recrudescence of anti-Swedish articles in the press.

The prolonged Russian occupation of the Danish island of Bornholm, that lies within easy striking distance of Sweden, also created an undercurrent of tension between the two countries. The Swedish Government discouraged public discussion of the subject, but the uneasiness remained.

Late in November, an incident took place that strikingly illustrated the extent of Russia's present influence on Sweden. The Soviet Government demanded extradition of 2,700 German soldiers, including 157 Baltic nationals, who had fled to Sweden in the last days of the war. Although public opinion in Sweden overwhelmingly opposed such a move, the Government reluctantly gave in to the Soviet demand.

The interned Germans and Balts appealed to King Gustav, who did not intervene, however. When the Swedish authorities, in the last week of November, ordered the forcible deportation of the internees onto a Soviet transport, riots broke out in several camps that had to be suppressed by the use of Swedish troops. Three internees committed suicide and about 600 were hospitalized as a result of self-inflicted wounds or hunger strikes. The affair caused a grave commotion throughout the country.

JOACHIM JOESTEN.

SWEDISH LITERATURE. Despite her neutrality Sweden was not unconcerned with the outcome of the war. During the last year of the war, Swedish literature reflected a genuine, if passive, interest in the conflict.

Many Swedish writers, having kept close contact with their Scandinavian colleagues who were refugees in Sweden and who had worked actively for the underground press in Norway and Denmark, were strongly pro-Allied. Much of the work of these pro-Allied writers was aimed at keeping Swedish neutrality as free from Nazi influence as possible. Leading among them were the novelists, Eyvind Johnson and Vilhelm Moberg. For several years Johnson edited political magazines for secret export to the underground in Nazi-dominated neighbor countries. In fact, toward the last months of the war, these authors confined themselves almost entirely to political writing and were subsequently received in the liberated countries as honored visitors.

Perhaps the most interesting book of the year was the first volume of Fredrik Böök's biography of the Swedish poet and Nobel prize winner, Verner von Heidenstam. Heidenstam was the key literary figure in the movement for Swedish nationalism which flourished during the 1890's. In addition to Böök's analysis, a new volume of memoirs, *Vägen till Öralid*, was written by Kate Bang, who for two decades was a close friend of Heidenstam's. Of the many novels published, however, none was comparable to Pär Lagerkvist's Renaissance study, *The Dwarf*, 1944 (published in America, 1945). The only well-known, elder novelist to write a new book was Sigfrid Siwertz. In his novel, *Förtroenden*, Siwertz analyzes false confession and suggests that the nature of such falsehood exposes the confessor as accurately as truth. Among the well-known younger authors were Frans G. Bengtsson, who published the second and last volume of his

Viking saga, *Röde Orm*, and Olle Hedberg, an analytical psychologist of French schooling, who completed *Den felande länken*, the fourth and final volume of a series. A literary award went to Albin Widen for a novel on Swedes settling in America. Arvid Brenner, a sober analyst of middle-class life, wrote *Vintervägen*, his best book thus far. The two most gifted prose writers to arrive after 1940, Sivar Arner and Lars Ahlin, published new books, *Knekt och klerk* which takes its motives from the Middle Ages and *Min dod ar min* which analyzes human failure.

Ahlin is considered the best in the "school of the '40's," a group of young writers influenced by that school of modern American prose which includes Hemingway, Faulkner, Caldwell, McCullers, and Saroyan. Among those who have attempted the rather forceful literary style of this school are Peter William Nisser, Sven Bergström, Märten Edlund, and Bertil Lagerström but they have not succeeded too well. An exception is Stig Dagerman who published his first novel, *Ormen*.

Harry Martinson, one of the group of proletarian writers who dominated the literature of the 1930's and at the same time reflected the democratization of Sweden during the Social-Democratic regime, wrote *Passad*. This re-established him as a poet, after his period of lyrical prose on travels, nature, and political themes. Of the Eliot-Auden-Spender-Rilke school is Gunnar Ekelof; the new collection by this sharp-witted mystic is called *Non serviam*. Another poet with about the same literary background is Karl Vennberg, who with *Tideräkning* took a long step toward establishing a personal, caustic style.

Vilhelm Moberg, the prolific novelist, dramatist, and anti-Nazi political writer, published a new play, *Vår ofödde son*, probably his best to date. The young sociologist, Axel Strindberg, made his debut as playwright with *Neutrala klubben*, a satire on the timid souls who bowed to Nazism.

The translated novel which received the most attention from Swedish reviewers was Lillian Smith's novel, *Strange Fruit*.

THORSTEN JONSSON.

SWIMMING. Aquatic stars never have been respectful of old records and in 1945 they broke some thirty national marks and a couple of world standards.

Most notable feat of the year was the 2:21 clocking turned in for the 220-yard breast stroke by Joseph Verdeur, of the Bainbridge Naval Training Station, whose time for a short course clipped a full second from the universal record hung up by Richard Hough. Then, Alan Ford, former Yale ace on loan to Columbia as a Navy V-12 trainee, capped a career of sparkling performances by covering 100 yards free style in 0:49.4 for the 20-yard course to surpass the great Johnny Weissmuller's long-standing mark of 0:49.8. The Balboa Bullet also holds the world record of 0:49.7 for a 25-yard pool.

America's more photogenic competitors once again were led by Miss Ann Curtis of San Francisco, who bettered the women's short-course time for 400 yards free style when she swam the distance in 5:00.9 as against the previous American mark of 5:02.2. This attractive West Coast girl, who was named "Woman Athlete of the Year" in 1944, retained six national free style crowns and shattered numerous other records during the year.

In the Amateur Athletic Union (A.A.U.) indoor meet, the young free-style queen kept titles at 100, 220, and 440 yards to lead her Crystal

Plunge companions to the team championship.

Outdoors, Miss Curtis repeated in the 100, 400, and 800 meter events to pace the Crystal Plunge mermaids to the team honors for that meet also. Marion Pontaco, another San Francisco girl, dominated the back stroke events, annexing laurels in both national A.A.U. meets. Diving honors were divided, with Mrs. H. C. Morgan of San Francisco winning from the platform and springboard outdoors, while Miss Zoe Ann Olsen of Oakland, Calif., triumphed from the low and high boards indoors.

Keo Nakama of Ohio State was a consistent scorer among the men, the little Hawaiian annexing national senior outdoor titles at 200 and 400 meters free style and the indoor crown at 440 yards. Adolph Kiefer helped Bainbridge gain the A.A.U. indoor crown with victories in the 150-yard back stroke and the 300-yard medley. Jimmy McLane, the 14-year-old Akron, Ohio, boy who is hailed by many as the greatest distance swimmer of all time, continued his brilliant young career by capturing the 800 and 1,500 meter free style crowns as well as the distance laurels outdoors.

Michigan State, the Central Collegiate Conference ruler, added the A.A.U. outdoor crown to its collection. Ohio State took the National Collegiate Athletic Association (N.C.A.A.) championship. Mert Church of Michigan, with victories in the 50 and 100 yard free style contests; Seymour Schlanger of Ohio State, who took the 440 yard and 1,500 meter free-style races, and Hobart Billingsley of Ohio State, who annexed both diving crowns were double winners in the N.C.A.A. meet.

Army triumphed in the Eastern Intercollegiate League and Michigan retained its laurels in the Western Conference.

Four high school marks fell during the year, Larry Larimore of Roosevelt High in Des Moines, Iowa, turning in the most sparkling feat when he returned a clocking of 1:01.9 for 100 yards breast stroke, not missing by much Hough's world record of 1:00.6. Larimore also helped Roosevelt High establish two new schoolboy standards in medley relays.

Brooklyn Technical High was returned champion in New York Public Schools Athletic League competition.

THOMAS V. HANEY.

SWITZERLAND. A federated republic in west-central Europe. Area: 15,944 square miles. Population (June 1943 estimate): 4,343,000, compared with (1941 census) 4,265,703. Vital statistics for 1944 (rate per 1,000): births 19.4, deaths 11.9, marriages 7.9, infant mortality (deaths under one year per 1,000 live births) 42. Chief cities (1941 census): Bern (Berne), the capital, 130,331, Zurich 336,395, Basel (Basle) 162,105, Geneva 124,431, Lausanne 92,541, St. Gallen 62,530, Winterthur 58,883, Lucerne (Luzern) 54,716.

Education and Religion. Education is compulsory, the school age varying in the several cantons. Primary education is free. In 1942-43 there were 443,167 students in primary schools, 73,387 students in secondary and lower middle schools, and 11,785 students (1943-44) in the universities. Religious affiliations (1930 census): 2,230,303 Protestants, 1,666,350 Roman Catholics, and 17,973 Jews.

Production. Agricultural pursuits employ 20.8 percent of the population. Twenty-two percent of the land area is unproductive. The main crops (1943; in metric tons) were: wheat 243,900, po-

tatoes 1,812,900, fruit 970,000, sugar beets, and vegetables. Livestock (1944): 1,497,436 cattle (including 817,123 cows), 599,521 pigs, 218,485 goats, 209,075 sheep, and 147,339 horses. In 1944 the output of milk totaled 546,190,000 U.S. gall.

Minerals produced included salt, iron ore, aluminum, and manganese. Manufactures of importance include watches, clocks, machinery, textiles, electric equipment, chemicals, shoes, cheese, condensed milk, etc. In 1943 a total of 425,972 employees were employed in the 9,082 factories. The output of peat in 1943 totaled 420,000 metric tons. In the same year the production of beer reached 22 million gall. See below under *Events*.

Foreign Trade. In 1945 imports were valued at 1,225,000,000 Swiss francs (1,186,000,000 in 1944); exports 1,474,000,000 Swiss francs (1,132,000,000 in 1944). The main trading countries in prewar times were Germany, France, Italy, Great Britain, United States, and Argentina. A great deal of the trade with frontier countries in transit trade. See below under *Trade Trends*.

Finance. Budget (1945): ordinary revenue 407,500,000 francs, extraordinary revenue 385,000,000; ordinary expenditure 581,800,000 francs, extraordinary expenditure 1,825,000,000 francs. See below under *Financial Situation*.

Government. The Constitution of 1874 provides a republican confederation of 22 cantons or States. The Federal Assembly consists of two chambers; one, the Council of States, is composed of 44 members—two from each canton; the other chamber, the National Council, has 187 members, all elected quadrennially by the obligatory vote of males who have attained 20 years of age. The Federal Council consists of seven members, all elected quadrennially by vote of the united chambers of the Federal Assembly; by similar vote, but annually, are chosen, from among the seven, a President of the Confederation and a Vice President of the Federal Council. Each of the Federal Council's seven members is assigned to the direction of one of the seven Federal administrative departments. During 1945 the President was Eduard von Steiger, a member of the Farmers, Workers, and Middle Class Party. President for 1946: Dr. Karl Kobelt of St. Gallen canton. Vice President for 1946: Dr. Philippe Etter.

Events, 1945. Neutrality. In a world-wide armed conflict a small neutral is inevitably exposed to suspicion and pressure on all sides. Switzerland's neutrality, however, is no *ad hoc* policy of opportunism but one of the oldest historical traditions among nations. Dating back to the early 16th century, it has more and more become the *sine qua non* of her existence, chiefly because of the ethnical composition of her population, which comprises marginal groups of the three main linguistic bodies of the Continent, people speaking German, French or Italian.

This neutrality has long been a factor in European politics. It received its first official sanction at the hands of the great powers in the Peace of Westphalia, 1648, was solemnly confirmed and guaranteed in 1815 by the Congress of Vienna, embodied in the Swiss Constitution of 1848, and again guaranteed in 1920 by the Council of the League of Nations. Such recognition by the powers, however, also constituted a great responsibility, forcing Switzerland to maintain the largest army in the world in proportion to its population of 4 million citizens. Only such "bonded" neutrality had any prospect of commanding respect. It alone could insure each neighbor against a possible flank attack through Swiss territory.

Danger of Invasion. The threats and dangers of

invasion during World War II were many and continuous. The 2½ million German-speaking Swiss constituted a powerful ideological provocation to annexation to the Third Reich. Always the Nazis interpreted the maintenance of democratic institutions in Switzerland as an alignment with the enemies of the Reich and a breach of neutrality, for which Goebbels once held out prospects of deportation *en masse* to Siberia as soon as the U.S.S.R. was conquered.

At the beginning of 1945 only the single-track Brenner railway remained to the Nazis as a link between Germany and Italy. A German attempt, however hopeless, to capture the St. Gotthard and Simplon lines by invading Switzerland and thus to draw into the general ruin the little southern neighbor who had proved so provokingly impervious to totalitarian philosophy, was something the Swiss Army Command realistically reckoned with. But with the crossing of the Rhine by the Allied Armies and the occupation of southwestern Germany by French troops the last of a long chain of military threats to Switzerland had passed.

Pressure from the Allies. However, the decisive change in the military situation outside the Swiss borders merely brought about a shift of pressure from the German to the Allied side. The U.S.S.R. fired the first gun in this pressure offensive. In 1944 the U.S.S.R. had refused to participate in the Chicago Conference on international air communication, ostensibly because representatives of Switzerland had been invited. She accused Switzerland of being a Nazi satellite in the same way in which the Nazis had accused her of being an ally of "the plutocratic-democratic-bolshevist warmongers."

The poor *entente* between Switzerland and Soviet Russia dates back to 1918, when the Soviet representatives in Bern abused their diplomatic privileges to foment internal strife and to take a hand in the Swiss general strike. The Russian diplomats were then handed their passports and official relations ceased. Still, in 1941 a commercial treaty was negotiated between the two countries and remained in force for two months, until the outbreak of the war. Attempts on the part of Switzerland, following the snub at the occasion of the Chicago Conference, to reestablish diplomatic relations with Soviet Russia were answered with a curt Russian refusal, which led to the resignation, in December 1944, of M. Pilet-Golaz, chief of the Swiss Political Department.

Throughout 1945 the attitude of the U.S.S.R. constituted probably the most sour note in Swiss affairs. Nor was, perhaps, the suspicion quite unfounded that the detachments of the Red Army and groups of escaped Russian war prisoners from German prison camps that found their way across the Swiss border did so by way of fulfilling an official mission. Certain it is that the Russian internees alone—some 9,000—chose to constitute themselves a problem. Tales of Swiss torture chambers for Russians issued from Moscow, though the internment camps for the Russians were each under the direction of a Russian officer responsible to a Swiss officer and were visited and approved by the International Red Cross and by British diplomatic delegations.

A few incidents did occur to aggravate the situation. Two Russians were shot in 1944 by Swiss guards breaking up a fight between the internees who, when interfered with, turned against the guards. In April 1945 a Russian attacked a Swiss civilian and cut off his nose, the victim immediately after taking his own life. Another Swiss civil-

ian who was attacked died of his wounds. After the taking of the German capital by the Russians, Swiss residents of Berlin, including diplomatic personnel, were transported to the U.S.S.R. "in reprisal." Not till the close of the year, after the mutual repatriation of the Russians and the Swiss, did the tension cease.

Pressure exerted on Switzerland by the other Allies had its causes in economic affairs. Switzerland is one of the most highly industrialized countries in the world, normally only one-third self-sufficient and two-thirds dependent on international exchange of goods, yet land-locked and without industrial raw materials. Her only primary asset is hydroelectric power. Neutrality and political independence under such circumstances easily become problematical. Ever since the beginning of the industrial era Germany had been Switzerland's chief source of raw materials as well as the chief export market. With the rise of Hitler the two countries found themselves at opposite poles of the ideological scale.

Swiss diplomacy nevertheless succeeded in making the Third Reich supply her steel, coal, and other vital materials. Incredible as it may sound, the whole equipment of the Swiss Army, designed in the first line as a defense against Germany, was made of German metal. Switzerland was the only neighbor of the Nazis that succeeded in keeping them out of her borders. Two reasons why her nominal independence was saved were: (1) the strength of her defenses which would have made the price of conquest excessively high, (2) the fact that Swiss industries and railways, if left intact, were more serviceable to the Germans than another neighbor ruined by conquest. In return for being left alone and supplied with small amounts of coal and steel, Switzerland, completely surrounded by Axis powers since 1941, was obliged to furnish manufactured articles, chiefly machine parts, instruments and electricity.

Not before the end of 1944, when the course of events had definitely turned in their favor, did the Allies protest against this Swiss-German exchange. Their demands that Switzerland cease all traffic with Germany and stop the flow of coal to Italy over her railway lines could not at once be met. (1) Because this commerce was regulated by treaties, some of them, like the Gotthard Treaty concerning rail communications between Germany and Italy, antedating the war by many years, and Switzerland refused to regard treaty obligations as "scraps of paper." (2) Because a unilateral break would have meant an abandonment of her constitutional neutrality. (3) Because the Allies were neither willing nor in a position to supply Switzerland with any of the badly needed goods hitherto obtained from Germany.

The connection between this Swiss stand and the more or less simultaneous bombing of Swiss railway lines at Schaffhausen, Basel and Zurich by American bombers is not clear at this date. A fresh start in negotiations became possible chiefly through the unexpectedly rapid collapse of the German front east of the Rhine and the failure of Germany to fulfil her contracts of delivery. An Allied Commission composed of Mr. Laughlin Currie of the Economic Division of the U.S. State Department, Mr. Dingle Foot and M. Chagueraud was despatched to Bern. On March 8 an agreement was signed, on the basis of which Switzerland began to supply the Allied forces with instruments and was permitted to resume a trickle of overseas imports and exports through Spanish and Portuguese ports.

German Assets in Switzerland. The one real difficulty encountered was the question of the German assets in Switzerland, which the Allies claimed were theirs by right of conquest. The issue was confused by Allied propaganda concerning the alleged billions looted by the top-ranking Nazis that were safely protected by Swiss neutrality and Swiss banking secrecy, and obscured by this quasi-sacred old Swiss institution of the *Bankgeheimnis*, which guaranteed everybody, citizen and non-citizen alike, immunity even against governmental curiosity as to the amount of his financial assets.

However, on the understanding that she would brook no interference with her national sovereignty, Switzerland showed herself willing to put all her cards before the Allies. Special legislation was necessary to lift banking secrecy. All foreign assets (save those of Allied—but not Axis—diplomatic personnel) were blocked and a comprehensive census of them ordered. Members of Allied Legations in Bern had at all time access to these documents and records. The results were published in December.* Purely German assets turned out to be only about half of what they had been estimated. The problem of expropriating them, however, still remained. Neither under Swiss law nor under international law does there appear to be any basis for such procedure.

The Swiss claim priority on all German assets in their country up to the amount of the total German debt to them, which is estimated at 973,000,000 francs, or almost as much as all German assets in Switzerland. A large part of these debts antedates the Nazi regime, having been contracted by German municipalities and other public corporations under the Weimar Republic. Another part, perhaps not inconspicuous, represents assets of wealthy refugees. The international press has seized upon the supposedly fantastic German cash accumulations in Switzerland under the pretext that they form the germ of a new world-wide Nazi underground movement. The Swiss feel that the Allied claims on these assets lack every legal and moral basis. They feel justified in asking why such pressure is exerted only against a small nation but not a large one like the Argentine.

Financial Situation. The economic situation in Switzerland during 1945 cannot of course be regarded except in connection with the war, profoundly affected as it was, first by the Nazi hegemony in Europe and then by the Allied victory. The total cost of military defense is figured at 9,285 million francs, which raised the indebtedness of the Swiss Confederation from about 1.5 to 6.7 billion, a net of 342 percent. This, however, is all internal indebtedness. Switzerland has no foreign

* The exact figures are:

1) Assets of persons other than Swiss domiciled in Germany. 371,000,000 Swiss francs.

2) Assets of persons other than Swiss domiciled in Austria. 41,000,000 francs.

3) Assets of persons other than Swiss domiciled in other territories of the former Greater Reich 7,000,000 francs.

4) Assets of German nationals domiciled in Switzerland. 234,000,000 francs.

5) Assets of German nationals domiciled in countries other than Germany, Switzerland, and German-occupied territories. 79,000,000 francs.

Total. 752,000,000 francs.

Other foreign assets in Switzerland comprise the following groups and amounts.

1) Assets of persons domiciled in what used to be Greater Germany: 90,000,000 francs.

2) Assets of persons other than Swiss and German domiciled in Switzerland: 1,120,000,000 francs.

3) Assets of Germans domiciled in countries other than Switzerland and Germany. 25,000,000 francs.

Total: 235,000,000 francs.

(1 Swiss franc = U.S.\$0.28)

debts. The position of the Swiss franc, therefore, has remained strong.

Gold reserves of the Banque Nationale Suisse between 1938 and 1944 increased from 2.9 to 4.6 billions, largely because of the reconversion of dollar assets (blocked June 14, 1941) into gold, physically deposited in the United States, as well as because of the repatriation, for lack of trade, of other Swiss assets abroad. During the same period the total assets of all Swiss banks increased by 1,800 million francs, largely for the reasons given above. This, however, represents only one-third of a corresponding increase during World War I and, in spite of the frequent large government loans necessitated by war mobilization, is opposed by a decrease in the annual banking turnover between 1938 and 1944 of 27 percent. These figures also contradict the theory that Switzerland became the refuge for large amounts of Axis capital during the war.

Trade Trends. Three times as many persons are normally employed in Swiss industries working for export as there are in agriculture. Most of this export market vanished in 1941 with the Allied blockade and the German counter-blockade. During the first half of 1945 imports amounted to only one-seventh of normal and reflect the worldwide scarcity of foods, raw materials and tonnage. Exports during the same period of about half of normal, while bringing about the exceptional feature of a favorable trade balance (usually corrected, though, by "invisible" exports and tourists) seriously threaten the exhaustion of the remaining small stockpiles of raw materials, chiefly coal and iron. Trade with Germany, normally making up 31 percent of the total import-export volume, has practically stopped. On the other hand, trade with France and Italy shows signs of revival. The Argentine, Brazil, the United States and Canada have advanced to first positions as suppliers, and of the modest export remaining, the United States alone during the first half of 1945 has absorbed one-third.

Agricultural Development, etc. Though Switzerland miraculously escaped being pressed into the war, she was forced to live for a number of years on her own substance, a difficult feat considering that normally she was self-sufficient for barely four months out of twelve as regards food supplies. An intensive agrarian program succeeded by 1945 in doubling the prewar productive area of 444,780 acres, in raising to 60 percent of normal the country's food needs and achieving a meager subsistence minimum of bread grains, potatoes, fruits, and fodder, but leaving a very acute shortage of fresh green vegetables, butter, eggs, and meat.

Nevertheless, through the International Red Cross and other organizations, Switzerland is contributing a share more liberal than would have been allotted to her had she become a member of UNRRA for the relief of war victims. Small additional quantities of foodstuffs could during the war and can again now be imported from South America in Switzerland's own merchant fleet, but most of the available tonnage was and still is reserved for more important imports, among which coal ranks first.

Industrial Trends. In the order of importance metallurgy, textiles, food products, watches, footwear and pharmaceutical products rank first among Switzerland's industries and occupy about 42 percent of her normal working population. All these depend on free access to foreign raw materials and foreign export markets. In spite of the drastic curtailment of industrial production by the war, un-

employment was so far avoided, mainly because of the heavy war mobilization, the partial shift from industry to agriculture and, since the end of the war, thanks to the ready markets for such manufactured products as could be supplied with the available raw materials.

JAMES PETER ZOLLINGER.

SYRIA AND LEBANON. Two Arab republics, also known as the Levant States, on the east coast of the Mediterranean between Turkey and Palestine. The mandate over them was conferred on France by the League of Nations on July 24, 1922. Their independence has been proclaimed on several occasions since 1941, and had become nearly complete by the end of 1945. The area of Syria and Lebanon together is about 57,900 square miles. Damascus is the capital of Syria, and Beirut of Lebanon.

Government. For the prewar political status of Syria and Lebanon under French mandate see the YEAR BOOK for 1941, p. 638. For political developments since 1941 see the YEAR BOOKS for 1942 et. seq., especially that for 1944, pp. 608-09. Each country is now generally recognized as an independent republic with its own constitution. Each has a President and a Parliament. Following the agreement of Dec. 27, 1943, between the French Committee of National Liberation and the two republics, there took place a gradual transfer of certain powers and functions from the former to the latter. This process was speeded up by the events of 1945 (see below) and was expected to be completed in 1946.

Events, 1945. The year was one of the most agitated in the history of the Levant States. The promise of independence made by the French authorities in 1941, and renewed in 1943, still seemed to the Lebanese and Syrians to have been only partially fulfilled by the beginning of 1945. They therefore decided to settle the question once and for all, choosing a moment when the military and political prestige of France was still in eclipse.

In January the heads of both republics stated that they wished to negotiate with France only as part of a general agreement with the Allied Powers. They also demanded control over the "troupes speciales"—the armed forces raised by the French from among the inhabitants of Syria and Lebanon and used by them for police purposes in those countries. During the time that General Sir Edward Spears was the British representative in Syria earlier in the war he lent a sympathetic ear to such demands. However, the British Government was now pursuing a policy of not stirring up trouble or irritating France as long as the war continued in Europe and the Far East. Nevertheless the de Gaulle regime was very suspicious of the British. Indeed, on Feb. 2 the French Council of Ministers accused Britain of plotting against French interests in the Middle East and declared that France would "defend her prerogatives in Syria and maintain order." Instructions to that effect were sent to General Beynet, French Delegate-General in the Levant.

The Lebanese Minister to Great Britain, Camille Chamoun, declared in a formal statement on Feb. 5 that neither his government nor that of Syria would accept the "preponderant position" desired by France in their countries. The Syrian and Lebanese Governments backed up their demands that the French turn over the special troops by inserting military items in their budgets (£15,000,000 for Syria, and £5,000,000 for Lebanon). In mid-February the two Levant governments asked the Yalta Conference to use its good offices in order

to effect a settlement between them and France. Nothing came of this, though Prime Minister Churchill consented during his Cairo visit to discuss matters with President Shukri Bey el Kuwatly of Syria.

The Syrian Chamber voted on Feb. 26 to declare war against Germany and Japan; Lebanon on the 27th. Both governments took this step in order to be admitted to the San Francisco Conference, and were consequently distressed when invitations were not forthcoming. Eventually, however, the difficulty was straightened out, the two countries were invited, and on Apr. 12 their representatives signed the United Nations Declaration in Washington.

By mid-May the situation in both countries had become decidedly menacing for the French. Demonstrations and strikes were held in protest over the failure to obtain local control of the special troops. Feeling also ran high over the continued presence of French troops, although as a matter of fact there were relatively few in the country—fewer in number, probably, than the British forces there. Yet when a small contingent of less than 1,000 new French troops were sent to Syria, reportedly as replacements, the lid blew off. On May 21 Syria and Lebanon jointly asserted their full independence by breaking off negotiations with the French, whom they charged with trying to retain air and naval bases as well as certain other military facilities. On the following day the Syrian Government demanded that the French withdraw their troops from the country and began to call its citizens into the National Guard. On the 27th there was serious fighting in Aleppo and Hama while sandbags were thrown up in Damascus. Syrians began to desert from the French forces in ever-increasing numbers. Fighting spread throughout the country during the following days, culminating in a French artillery attack on Damascus that killed and wounded several hundred civilians.

On May 30 Foreign Minister Eden was forced to admit in Commons that the situation "had greatly deteriorated" and that the British Government was planning to take definite action. On the following day Prime Minister Churchill sent a peremptory note to General de Gaulle informing him that the Commander of the British forces in the Middle East had been ordered "to intervene to prevent a further effusion of blood in the interests of the whole Middle East which involves communications for war against Japan." He insisted that the French authorities immediately issue a cease fire order to their troops and withdraw them at once to their barracks. After this had been done, he declared, it would be possible to begin three-way talks (including the United States) in London. Naturally this virtual ultimatum stunned the French, particularly as it was made plain to them that the United States backed up the British position. On the second of June the Russians also intervened by sending notes to the other four principal Allied Powers suggesting the wisdom of timely action "to settle the conflict peacefully." By then British troops had restored order in Damascus after having confined French troops to their barracks. The French commander, General Oliva-Roget, proved to be uncooperative and was relieved of his command at Britain's request.

Naturally a person of General de Gaulle's character reacted very strongly against the Churchill statement of May 31. At a press conference on June 2 he declared that he had already given the cease fire order before Churchill's communication had been received, and that in any case it could not "change the situation." He placed the blame

for the Syrian trouble squarely on the British. He refused to admit that he or that any French Government had made any mistake, and asserted that the French people were solidly behind him. In general the tone of his interview was sarcastic and highly critical of the British. Such remarks were hardly calculated to smooth relations between the two powers. In reality, however, the British could afford to take a somewhat tolerant view of the situation since they were in military control of the Levant. Indeed their troops served to protect the French forces from further attack by the infuriated Syrians. On June 5 Mr. Churchill denied de Gaulle's charge that Britain had incited the troubles in Syria. The cause of these, he held, was the provocative acts of the French authorities. The hatred which the French had aroused against themselves in Syria was indicated on June 6 when President Kuwatly asserted that his countrymen would never tolerate the return of the French. Even French newspapers were excluded from the country. Meanwhile both Generals Oliva-Roget (who by June 7 was in Paris) and Beynet (still in Beirut) declared they had definite proof that the British had not only encouraged the uprising through agent provocateurs, but that they had actually armed the insurgents. By way of reply to these and other insinuations an official British statement of June 22 announced that Britain's only motive in intervening had been to keep the Middle East quiet as long as the war continued in the Far East. Any designs on French territory were explicitly repudiated.

The restoration of order was fairly general by the middle of June despite isolated outbreaks here and there. On July 1 the Syrian Government stated that the country was quiet, but that the fighting had cost 593 killed and 1,972 wounded.

Despite General de Gaulle's somewhat unbending attitude, early July saw the French preparing to give up what little authority remained to them in the Levant. On July 7 they announced that within forty-five days control over the remaining "troupes speciales," said to number in the neighborhood of 30,000, would be turned over to the governments of the two republics. These forces would thereupon become the nucleus of the new Syrian and Lebanese Armies. However, the few French troops still stationed in the Levant, estimated at around 5,000, were to remain for the time being in Lebanon. On Aug. 7, two weeks ahead of the date originally set, the "troupes speciales" were transferred, as promised, without any further incidents.

During the latter part of the summer and early fall there were several cabinet crises in Syria and Lebanon which, however, did not appear to have any deep significance as far as the external affairs of those two countries were concerned. Both governments were active in supporting the Arab League in its diplomatic efforts to prevent further Jewish immigration into Palestine (see PALESTINE; PAN ARAB AFFAIRS).

Meanwhile there still remained the problem of what to do with the French and British troops in the two countries. In order to regulate this situation Britain and France signed a pact on Dec. 13 by which they agreed to evacuate their troops from Syria and Lebanon; to consult and to give each other mutual support in all Middle East questions; and to confirm the independence of the two Levant States. As a matter of fact there were only a few French troops left in either Syria or Lebanon. The latter were to be evacuated when the UNO was in a position to guarantee the security of that country, a stipulation to which the Lebanese objected strenuously. The actual task of working out the

modus operandi of evacuation was left to the British and French military authorities on the spot. They began their meetings at Beirut on Dec. 21 and were still negotiating at the close of the year. Meanwhile the French officials in Lebanon had turned over to local officials the control of customs, radio, railways, and the other last vestiges of French authority.

Characteristics. The population of Syria in 1943 was 2,860,411, and of Lebanon, 1,047,745. The principal cities, with their estimated populations are: Damascus, 275,000; Aleppo, 265,000; and Beirut, 250,000. The population of Syria, and more particularly of Lebanon, is far from homogeneous, either racially or religiously. Although Arabic is the official language and is spoken by the majority of the inhabitants, there are important minorities of Armenians, Circassians, Jews, Turks, Turkomans, Kurds and others, including Europeans.

In Syria the majority is Moslem, mostly Sunni. In Lebanon the Christians constitute from 55 per cent to 60 per cent of the population, but are divided among themselves into various sects of which the Maronites, Greek Orthodox, Greek Catholics (Uniates), Armenians and Melkites are the most important numerically (in the order named). These and other denominations are also found in smaller numbers in Syria. Each of these churches has its own ecclesiastical organization and hierarchy. Altogether the racial and religious mosaic of which the two republics consist is a fruitful source of political complications, both domestic and foreign.

Education is provided by both government and private schools. The latter are sponsored by the various religious communities and by foreign missionary and cultural organizations. In Lebanon the Christian schools far outnumber those operated by the State and the Moslems. The contrary is true in Syria. At Beirut there is the American University and the French Catholic Université de St. Joseph, each offering a varied curriculum. Higher education in Syria is provided by the Arab University at Damascus.

The Country and Its Economy. Lebanon is a small country consisting of a narrow coastal plain and the Lebanon range which rises immediately behind it. There is little room for agriculture except in small tracts, many of which are terraced. However, rainfall is more plentiful here than in the interior. The central valley of Syria is fertile and relatively well watered. But east of the Anti-Lebanon Mountains the desert begins, and here nomadic pasturing and oasis culture are the rule. Little of the original forest cover remains on the mountains of either country, the famous Cedars of Lebanon being all but extinct.

The principal products of the soil, and their estimated output for both countries in 1943 were: wheat, 624,280 metric tons; barley, 330,485 metric tons; grapes, 292,622 metric tons; olives, 134,339 metric tons; figs, 54,178 metric tons; sorghum, 44,246 metric tons. Figures for the same year showed 2,492,000 sheep, 1,573,000 goats, 490,000 horses, 287,000 donkeys and 54,000 camels.

Few minerals are exploited, and these in small quantities. Further geological exploration may reveal resources not now known. Factories are few and on a small scale, but political independence will very likely lead to increased industrialization. One of the pipelines from the Kirkuk oil field terminates at Tripoli in the Lebanese Republic.

Foreign trade figures for 1943 gave imports a value of 246,171,000 Syrian Pounds and exports as worth 168,065,000 Syrian Pounds. The two prin-

cipal ports, both in Lebanon, are Beirut and Tripoli. There are over 1,000 miles of railroad, including the Syrian segment of the Istanbul-Baghdad line, the Aleppo-Damascus line, the Homs-Tripoli-Beirut-Haifa line (completed during the recent war) and the narrow gage Mecca railway running south from Damascus to Trans-Jordan. Beirut and Damascus are connected by a narrow-gage, partly cog-wheel line, but the highway now carries much of the traffic between these points. Several of the great inter-continental airlines pass through Syria.

ROBERT GALE WOOLBERT.

TANGIER. An internationalized district in northwestern Morocco diagonally across the Strait of Gibraltar from the British fortress. Area, 225 square miles, and population (1941), about 100,000 (36,500 native Moslems, 16,500 Europeans and 7,000 native Jews). Over half the population dwells in the city of Tangier.

Tangier forms part of the Empire of Morocco, the Sultan being represented there by a Mendoub. For a description of the regime set up by the Tangier Convention of Dec. 18, 1923, as amended on July 25, 1928, see YEAR BOOK for 1941, p. 729. This international government was overthrown on June 14, 1940, when troops from Spanish Morocco occupied the Zone, ostensibly to guarantee its neutrality. For further details see YEAR BOOK for 1944, p. 610. The official languages in the Tangier Zone are French, Spanish, and Arabic. The education of the native Moslems is left largely to the Koranic schools, though both the French and Spanish authorities maintain several educational institutions, to some of which natives are admitted.

The Tangier Zone has very little agricultural production and must import much of its food. Through its port, however, passes a considerable transit commerce, much of which is carried over the railway to Fez and other points in the French Zone. As a rule imports exceed exports in a ratio of eight or more to one.

Events, 1945. The victory of the Allies in Europe inevitably meant that an end would be put to the illegal occupation of the Tangier International Zone by the Franco regime. Early in June Spain indicated her willingness to negotiate the matter. After preliminary discussions during this same month, the governments of Great Britain, the United States and France decided to send delegates to a conference in Paris at which the status of Tangier would be decided without consulting Madrid. Representatives of these three Powers met at the Quai d'Orsay on July 2, only to be faced with a Soviet demand that Russia too be admitted. As a result of this request the conference was postponed temporarily.

The Soviet Government cited Russia's long-time interest in Tangier, as evidenced by her participation in the Algeiras Conference of 1906. It also pointed out that if Russia was not a signatory of the Tangier Convention of 1923, neither was the United States, which was nevertheless represented at the conference in Paris. The American delegation indicated that it had no objection to Russian participation; the French were known not to be opposed to it; but the British chose to delay until the question could be discussed at the forthcoming Big Three Conference at Berlin. Meanwhile the British elections resulted in the overturn of the Churchill Government and the installation of the Labor Party in power. By the end of July it was known that a Russian representative would be admitted to the conference when it resumed on Aug. 6. Finally, after another postponement to allow the

new Labor Government in Britain to get oriented, the conference reconvened on Aug. 10.

On Aug. 31 the representatives of the four Powers signed a preliminary agreement, which was described in a communiqué issued on Sept. 4 as follows: "According to the terms of these resolutions, the Spanish Government will be called upon to evacuate the Tangier zone; the sovereign rights of His Majesty, the Sultan, in the zone will be reestablished; the international administration will be restored on the basis of the Convention of 1923, modified in 1928; the United States of America and the U.S.S.R. are invited to collaborate in the administration; the regime thus established will be provisional and will remain in force until the conclusion of a new convention between the Powers signatories of the Act of Algeciras; and, finally, an international conference of the Powers signatories of the Act of Algeciras will be subsequently convoked in order to examine the changes in the Tangier statute that may be proposed by any of these Powers."

The last of the Spanish troops left the International Zone on Sept. 6. A diplomatic protest from Madrid to London got a chilly reception, and on Oct. 11 the Mendoub, the official delegate of the Sultan of Morocco, returned to Tangier aboard a French cruiser after five years of exile. The new international regime was installed with a Portuguese Admiral as the chief administrator. The Committee of Control for the International Zone was to include representatives of France, Britain, the United States, Portugal, Spain, Belgium, Russia, and the Netherlands. This temporary arrangement was supposed to be superseded by a more permanent one, to be fixed by a conference called in 1946, to which Spain would be admitted only if the Franco regime had been ousted by then.

ROBERT GALE WOOLBERT.

TARIFF COMMISSION, U.S. An independent nonpartisan agency of the U.S. Government, created in 1916, which investigates and reports upon tariff matters. It also handles cases of unfair practices in import trade. The Committee makes such investigations and reports and furnishes such information as may be required by the President, the House Ways and Means Committee, the Senate Finance Committee, or either branch of Congress. The work of the Commission falls into two groups, general administration and auxiliary services under the Secretary, and professional, scientific, and technical work under the Planning and Reviewing Committee. The war agencies called upon the Commission for assistance in determining many matters relating to the economic aspects of the war effort. Chairman: Oscar B. Ryder.

TAXATION. Congress enacted two major revenue laws during 1945. The first of these, the Tax Adjustment Act of 1945, became law July 31, 1945. The Revenue Act of 1945 went into effect November 8, 1945.

The Tax Adjustment Act, enacted while the war with Japan was still going on, was designed to provide additional cash to business for reconversion requirements, rather than to reduce the tax load. This was accomplished through four major provisions, as follows:

1. The postwar credit of 10 percent of excess profits taxes paid could be taken currently by corporations with respect to such taxes due for 1944 and subsequent years. This was tantamount to reducing the excess profits tax rate from 95 percent to 85 percent for the years 1944 and 1945.

2. Postwar excess profits tax refund bonds previously issued to corporations could be cashed by them on or after January 1, 1946, instead of waiting for the more distant maturities originally specified in the law.

3. Refunds due corporations on account of carrybacks of net operating losses and of unused excess profits tax credits could be secured more speedily. In the first place, corporations expecting credits on account of carrybacks are authorized to apply for an extension of the time for payment of taxes otherwise due in any taxable year ending after September 30, 1945. Secondly, application may be filed for a tentative carryback adjustment along with the return for the year in which the operating losses or unused excess profits tax credit is realized.

4. Corporations are authorized to apply for an immediate tentative adjustment of taxes on account of final amortization of defense facilities due to the cessation of hostilities. The Commissioner of Internal Revenue is required to dispose of such applications within 90 days.

This law also increased the specific exemption under the excess profits tax from \$10,000 to \$25,000, to aid smaller companies, beginning in 1946. However, since the excess profits tax was subsequently repealed, this reduction did not go into operation.

It has been officially estimated that the Tax Adjustment Act would increase corporation cash resources by some \$2,500,000,000, and would reduce current tax liabilities by some \$2,000,000,000. Thus, almost \$5,000,000,000 of additional cash resources would become available to finance reconversion.

The Revenue Act of 1945. Immediately after V-J Day, Congress went to work on a bill to grant some tax relief to corporate and individual taxpayers in 1946. While it was recognized that Federal expenditures would remain at a high level, it was felt that some reduction was justified because outlays would be contracted steadily as Government purchases of war materials and supplies were halted and millions of men were discharged from the armed forces. Minor differences developed between the Treasury, the House and the Senate as to the contents of the bill, but the measure as finally passed was regarded as final with regard to corporate tax rates, while more extended consideration of individual tax relief was scheduled for 1946.

The excess profits tax was repealed outright as of December 31, 1945. However, to protect corporations that face heavy reconversion expenses or losses in 1946, the carryback of unused excess profits credit will continue through 1946. The Senate Finance Committee, in its report on the bill, pointed out that "there is danger that the operation of the unused excess profits credit carryback provision, particularly in 1946, may make possible certain abuses . . . your committee will give further consideration to the necessity or desirability of retroactive legislation in this connection." The law also reduces corporate surtaxes from 16 to 14 percent, thus reducing the combined normal and surtax rate on corporate income from 40 to 38 percent. This is designed to give some measure of relief to the 90 percent of all corporations that did not pay excess profits tax. Smaller corporations received somewhat greater relief, since the surtax rate is made 6 percent on the first \$25,000 of surtax net income of corporations, 22 percent on the next \$25,000, and 14 percent on the entire net income if it exceeds \$50,000.

The new revenue law repeals the capital stock tax and the declared value excess profits tax, long

regarded as mere nuisance levies by corporations. The first of these taxes was repealed for years ending after June 30, 1945 and the second for years ending after June 30, 1946.

The Treasury estimated that these changes in corporate taxation would result in a net reduction of \$3,140,000,000 in taxes collected from corporations during the calendar year 1946. It should be recognized that the repeal of the excess profits tax would tend to increase normal and surtax collections, since corporate income formerly taxed as excess profits will now become taxable at the normal and surtax rates. During the four years 1942-45 in which the excess profits tax was in effect, the yield aggregated \$27,000,000,000 in revenue, or almost one-fourth of total Federal tax collections.

The War Contracts Renegotiation Act, which was regarded as a supplement to the excess profits tax, was extended from June 30 to Dec. 31 by act of Congress. Total sums recaptured by the Treasury through contract renegotiation during the four years that this legislation was in effect were estimated at almost \$7,000,000,000, but most of this saving was offset by reduced tax collections resulting from the deduction of renegotiation refunds from taxable income.

Substantial tax relief is accorded also to individual taxpayers. The exemption of \$500 for the spouse and each dependent hitherto allowed in computing the individual surtax will now be allowed in computing the 3 per cent individual normal tax. As a result, an estimated 12,000,000 persons in the low-income brackets will be relieved from paying income tax beginning with the taxable year 1946, although it does not affect their obligation to file returns. The statute still specifies that each individual whose gross income is \$500 or more must file a return, regardless of whether or not a tax is due. This law reduces by approximately one-fourth the total number of individuals subject to tax. Surtax rates are reduced by 3 percentage points in each bracket. For example, the 20 per cent surtax is reduced to 17 per cent, the 22 per cent surtax to 19 percent, etc. Relief is thus provided to all individual taxpayers subject to the surtax. In addition, the new law provides an over-all reduction of 5 percent in the total amount of normal and surtax due for the calendar year 1946. As a result of this over-all reduction, relief will be relatively greater for large than for small incomes.

Other provisions of the new revenue law applicable to individual taxpayers reduces the maximum normal and surtax rate applicable to any individual taxpayer from 90 to 85½ percent.

In line with the lower personal income tax rates, withholding rates applicable to wages and salaries paid on and after January 1, 1946, are also reduced. On a salary of \$200 monthly, for example, with one exemption, the withholding levy is reduced from \$32.20 to \$26.60.

The new law liberalizes tax benefits to members of the armed services, providing for the exclusion from gross income of the entire service pay of enlisted personnel for taxable years beginning after 1940, and extending the \$1,500 exclusion in the case of officers until the termination of the present war is proclaimed by the President. Commissioned personnel may defer taxes attributable to service pay for the years 1940-1946, and pay off the accumulated tax due over a three-year period in 12 quarterly installments. Similar deferment may be made of pre-service earned income for 1940 or 1941, where the tax became payable after the taxpayer's entry into the armed forces.

The revenue law provides that the wartime excise tax rates shall lapse six months after the date of termination of hostilities. Provision is made in the 1945 Revenue Act for refunds of floor stock taxes on alcoholic beverages, and electric light bulbs at that time. The \$5 use tax on motor vehicles and the \$5-\$200 tax on boats was repealed outright as of June 30, 1946. The Federal Social Security tax is to remain frozen at 1 per cent through 1946.

Reductions in individual income tax collections and the repeal of the automobile use tax will reduce Treasury revenues by \$2,790,000,000 during the calendar year 1946, according to official estimates.

Postwar Tax Planning. The end of the war centered attention to a greater extent upon immediate tax reduction, rather than long-range tax planning. The most significant new proposal for postwar tax reduction was that issued by the Committee on Postwar Tax Policy headed by Roswell Magill, which issued a broad program for tax revision in August. This plan was described as "A Tax Program for a Solvent America." Its chief features are a single individual income tax beginning at 15-20 percent, and reaching maximum rates of 67-72 percent, designed to provide some 50 percent of total Federal revenues; elimination of double taxation of corporate income, and retention of the pay-as-you-go principle. A freezing of present capital gains and losses rates for five years is proposed, to end uncertainty on this score. Withdrawal of the Federal Government from estate and gift taxes is urged, to leave this field to the States. A single tax rate for corporate income, preferably at the same rate as the initial rate on individual income, is favored.

In years when expenditures rise, a Federal retail sales tax of 5 percent is proposed, on the ground that as expenditures rise less palatable methods of taxation are required to provide the added revenue from a maximum number of taxpayers. This policy would build public support for economy in Government Spending.

Future tax revision will depend largely upon the level of Federal expenditures. Government spending and tax collections both will reflect to a large extent the level of national income. Hence, future reductions in taxation may depend as much upon the state of business as upon fiscal policy. The extent of this dependence may be seen from the fact that the Committee on Postwar Tax Policy

suggests a 20 percent corporation and initial individual income tax rate to raise \$18,000,000,000 of revenue if the national income is \$140,000,000,000, but a corporation tax rate of 40 percent and an individual rate of 22 percent will be needed to raise the same amount of money with a national income of \$115,000,000,000.

Capital Gains Taxation. Rising prices for securities and real estate brought forward proposals for discouraging speculation. Most significant of these was that presented to the Senate Banking and Currency Committee in March by Chairman Marriner S. Eccles of the Board of Governors of the Federal Reserve System. Mr. Eccles proposed a special tax of 90 percent on capital gains derived from real estate, securities, and other capital assets acquired after January 1, 1945 and sold within two years. Thereafter, this special capital gains tax would decline by 10 percent or more annually, until it returns to the existing rate of 25 percent. Mr. Eccles contended that this tax would discourage speculation in homes, farms, stocks and business properties, and so would supplement ceilings imposed by the Emergency Price Control Act upon other prices. He charged that "the most serious gap in the line of defense against inflationary forces is the capital gains loophole in the wartime tax structure."

Strong opposition was displayed in Congress to proposals for changing capital gains rates, however. Also, many feared that a punitive capital gains tax would defeat its own purpose, in that it would discourage the sale of capital assets as well as their purchase, and by drying up offerings could even accelerate price increases.

With the refusal of Congress to give immediate consideration to modification of the capital gains tax, the President proposed in December that residential property be brought under price ceiling controls, so as to check speculation and rising prices for such property through direct curbs. Legislation is required for such ceilings.

JULES I. BOGEN.

TAX COURT OF THE UNITED STATES. An independent agency of the U.S. Government (formerly the U.S. Board of Tax Appeals, created by the Revenue Act of 1924). Its function is to determine, after hearing, whether there is a deficiency or an overpayment, where deficiencies have been determined by the Commissioner of Internal Revenue, in income, profits, estate, gift, and unjust enrichment taxes, and personal holding company surtaxes; to adjudicate controversies relating to excess profits on Navy contracts and Army aircraft contracts; and to review the action of the Commissioner in deficiency and refund cases founded on claims of abnormalities under excess profits and processing tax statutes. Presiding Judge: J. Edgar Murdock.

TENNESSEE VALLEY AUTHORITY (TVA). A corporation created by Congress in 1933 to develop the Tennessee River System in the interest of navigation, control of floods, and the generation and disposition of hydroelectric power. It conducts a program of water control and conservation, including fertilizer research. The TVA is constructing a system of dams (q.v.) which will provide a nine-foot navigable channel from the mouth of the river near Paducah, Ky., to Knoxville, Tenn., 648 river miles. The Tennessee basin includes parts of seven States, an area of 41,000 square miles with a population of about 3,000,000. See **WATERWAYS**.

The Corporation's power-producing system has an installed capacity of 2,201,902 kilowatt. New capacity will bring the total to 2,265,902 in 1946.

As of June 30, 1945, the corporation had contracts for sale of power at wholesale with 89 municipalities, 3 counties, 46 cooperatives, and 3 privately owned utility companies (in addition to contracts for purchase or interchange of power with 19 private companies). These agencies (the private companies excluded) distribute power to more than 600,000 ultimate consumers under retail rates agreed upon with the Authority. The corporation had contracts for bulk sales of firm and secondary power with 10 large industrial concerns. It is also providing power to 13 projects, plants, and bases of Federal agencies.

During the fiscal year 1945 the Authority's power sales exceeded 10,000,000,000 kw-hr and its gross revenues from the sale of power were nearly \$39,000,000. Chairman: David E. Lilienthal.

TENNIS. The annual championships held at the West Side Tennis Club in September proved a highlight of the 1945 sports schedule, for the tournament was the first of national status to follow World War II. Although staged only a short while after the cessation of hostilities, the tourney in the colorful stadium of Forest Hills attracted a sprinkling of foreign stars and enough big-name players to make it one of the best in many years.

Sgt. Frankie Parker of the Army Air Forces flew from Guam and successfully defended the singles title that he had won in 1944 after fifteen years of effort. Parker had taken part in no tournament play last season prior to the nationals, but he had had the benefit of workouts with Bobby Riggs and Don Budge, pro stars, in the Marianas and the champion gave a beautiful exhibition in the classic at Forest Hills.

Billy Talbert of Wilmington, Del., the man who had given Parker such a close battle in the 1944 final, was a heavy favorite to dethrone the titleholder. Talbert had won ten straight tournaments leading up to the nationals, victories in the U.S. clay-court, Delaware, Tri-state, Eastern, Seabright and Southampton events being listed among his achievements.

Talbert earned the right to meet Parker when he eliminated Francisco Segura, Ecuador's gift to tennis, 7-5, 6-3, 6-4, in the semi-final round while the champion was taking the measure of Elwood T. Cooke of Boston, 6-1, 8-6, 7-5. The final provided plenty of action and the crowd of 13,500 spectators saw the rivals battle for one hour and six minutes in the first set before Parker gained a 14-12 verdict. Then the titleholder, who refused to wilt in the face of Talbert's terrific service and driving, went on to triumph by 6-1, 6-2.

Parker won on his accuracy and beautiful backhand passing shots that time and again trapped his foe. Talbert, who was handicapped by a pulled tendon in his left knee, seemed to tire quickly after the long opening stanza.

The three-year reign of Miss Pauline Betz, Los Angeles, as women's national champion came to an end when the attractive coast star bowed by 3-6, 8-6, 6-4, to Mrs. Sarah Palfrey Cooke, the titleholder in 1941 who had been out of competition the previous season. The graceful Bostonian, who had vanquished Miss Betz at Rye and in the final of the clay-court championship earlier in the campaign, climaxed a great comeback with her victory at Forest Hills. Mrs. Cooke, who incidentally had beaten Miss Betz in the 1941 final, displayed a forehand and overhead game that proved too much for the energetic Californian.

Talbert gained some measure of satisfaction for his singles setback when he won the doubles crown with Lieut. Gardnar Mulloy, U. S. N. R., and kept the mixed doubles title with Miss Margaret Osborne, San Francisco. Miss Osborne, a consistent singles winner on the coast and the season's star in doubles, also retained her national doubles title with Miss Louise Brough, Beverly Hills, Calif., as her partner.

Following the blue-ribbon event at Forest Hills, Parker took singles honors in both the Pan-American and Pacific southwest tournaments. Miss Mary Arnold of Los Angeles was a triple victor in the Pan-American, taking the women's singles, the doubles with Miss Dorothy Head, Alameda, Calif., and the mixed doubles with Armando Vego.

J. Gilbert Hall, South Orange, N. J., kept his U. S. veterans' title and won doubles laurels with Sydney Adelstein, New York. Miss Barbara Wilkins, New Rochelle, N. Y., scored in the girls' national indoor event, when Shirley Fry, Akron, did not defend, but the Ohio miss kept her outdoor championship. The women's indoor title went to Mrs. Helen Pedersen Rihbany, New York. Little Connie Clifton of Rollins was victor in the women's intercollegiate while Segura, representing Miami U., won men's laurels for the third year in a row.

The end of the war in Europe found tennis coming back into the sports picture abroad. The presence of many U. S. players gave spice to the few tournaments that were held. Sgt. Charles E. Hare of Chicago and Pvt. Budge Patty of Hollywood were outstanding, while Lieut. E. G. Moylan of the U. S. Navy found enough time from his duties to win the championship of Ireland.

Welby Van Horn, Atlanta, took U. S. pro singles honors although Frankie Kovacs, Oakland, Calif., earned top ranking of the World's Professional Association. The world hard-court title was won by Bobby Riggs, Los Angeles ace.

TEXTILE FOUNDATION, Inc. A Foundation created in 1930 within the U. S. Department of Commerce to conduct research for the benefit and development of the textile industry and its allied branches.

Sixteen research associates are working in the laboratories of the Textile Foundation at the National Bureau of Standards on problems related to the war effort. These projects include investigations related to clothing for aviators; clothing for jungle troops; water repellency treatments for military fabrics; deterioration of military fabrics through exposure to the elements as well as to various types of chemicals; influence of different types of fibers on the warmth and serviceability of blankets, underwear, and clothing; and shrink-proofing treatments for wool socks, underwear, etc. Chairman: Franklin W. Hobbs.

THEATER. Lamentably and, moreover, well-nigh incredibly, most of the ills that, from the standpoint of dramatic art, had so afflicted the theater in 1944 recurred in 1945 in even more aggravated form, at least until near the close of the year. The war appeared to have drained off, in almost every direction, the various talents essential to this form of endeavor. The one perceptible difference was that, particularly as the fall season

progressed, the very low-grade plays seemed to linger less long—to effect more precipitate get-aways, frequently within the week, occasionally after only the second performance. Audiences, more preponderantly in uniform than ever, had apparently gained in discrimination, which possibly speaks well for the quality of entertainment that had been purveyed to the servicemen in the war zones. And again, as for several years past, items that stood out even moderately above the general, run-of-the-mill level prospered as though they had been given the full measure of critical approval instead of luke-warm receptions. So that, once more, we are dealing rather with the exceptions than with the rule.

Happily there were a few notable exceptions, and the very first play to open in New York in the new year was one of them—*The Hasty Heart*, a comedy by John Patrick with overtones of pathos expertly blended. The scene was a wartime convalescent ward on the Assam-Burma front; the central figure a young Scotsman with, unknown to himself, an incurable malady leaving him only a few weeks to live. His ward-mates, warned in advance to keep the secret, outdo themselves in clumsy efforts at kindness which at first fall on barren ground. The victim's brief life has been of the hard variety and he distrusts this unaccustomed benevolence, but eventually warms to it and to the patient ministrations of the youthful nurse; which leads to further complications when, of necessity, he learns the truth. Admirably acted by Richard Basehart as the Scot, John Lund as the American in the next cot, Anne Burr as the nurse, and several other well-chosen players, the piece scored deserved success. The good taste of metropolitan theater-goers, frequently open to question, was put to the test and, happily, not found wanting when a modernized version of the elderly farce once known as *Ladies' Night*, fresh from a run of over a year in Chicago as *Good Night, Ladies*, managed to survive but a few weeks in New York. Until mid-December Shakespeare was represented solely by Margaret Webster's modern interpretation of his rarely staged and vaguely understood comedy-fantasy, *The Tempest*, which, though agreeable entertainment in itself, was quite as much Webster as Shakespeare, played by a cast including Vera Zorina, best known as a ballerina, in the role of Ariel, the Negro actor Canada Lee as Caliban, Arnold Moss as a stately Prospero, Frances Heflin as the ethereal Miranda, and Paul Leyssac, Philip Huston and Vito Christini in the other outstanding parts. Its hundred performances doubtless established a record for that work of the Bard. But a musical item with book by Herbert and Dorothy Fields and score by Sigmund Romberg, entitled *Up in Central Park*, featuring echoes of New York's scandalous Tweed ring as well as the famous cartoonist, Thomas Nast, all in the spirit of Currier and Ives, made its appearance at the end of January and continued throughout the year with Wilbur Evans, Maureen Cannon, Noah Beery, Sr., and Maurice Burke prominent in the tuneful romance.

Moderate success attended *The Overtons*, a negligible comedy by Vincent Lawrence employing the services of Jack Whiting, Arlene Francis, Glenda Farrell, and Walter N. Greaza; *Hope for the Best*, by William McCleery, concerned with the beneficent effect of true romance on the career of a newspaper columnist as exemplified mainly by Franchot Tone, Jane Wyatt, Joan Wetmore and Doro Merande; and Philip Barry's fantastic *Foolish Notion*, in which the Theater Guild starred Tal-

lulah Bankhead with a supporting cast including Henry Hull, Donald Cook, Aubrey Mather and youthful Joan Shepard. Far happier, surprisingly, was the lot of a still more fanciful "legend with music" called *Dark of the Moon*, by two hitherto unknown young authors, Howard Richardson and William Berney, based on a version of the Carolina mountain ballad of *Barbara Allen* and first disclosed in one of the preceding summer's experimental offerings, which, with Richard Hart and Carol Stone in the leading roles, scored a long and gratifying run. But George Kelly, reappearing after a long silence as the author of *The Deep Mrs. Sykes*, was found to have portrayed in his central character a woman of so disagreeable and reprehensible a nature that the public lost interest in her after two months despite masterly acting by Catherine Willard in the title role, and Jean Dixon, Neil Hamilton, and Romney Brent in others. In contrast, an exceedingly light comedy, *Kiss Them for Me*, fashioned by Luther Davis from Frederic Wakeman's novel, *Shore Leave*, depicting the hectic four days' furlough of a trio of servicemen in San Francisco, caught the popular fancy and held it for a substantial period. Richard Widmark, Dennis King, Jr., and Richard Davis figured merrily as the three.

Late in March Katharine Cornell revived *The Barretts of Wimpole Street* for an engagement lasting into June with virtually the same company, including Brian Aherne and Brenda Forbes of the original 1931 cast, that had just completed a tour of the American army camps in Europe in this play. And then followed what will very likely go into the permanent record as the two greatest stage triumphs of 1945 and may be confidently expected to be still flourishing when this history is written for 1946. The first was *The Glass Menagerie*, by Tennessee Williams, co-starring Laurette Taylor, who returned after a considerable absence, and Eddie Dowling, who was also a co-producer in the case. It was a so-called "memory play" with Mr. Dowling, as narrator, introducing the various divisions, expressionistically staged. Miss Taylor accumulated new laurels by her expert, glowing and genuinely moving portrait of a faded southern belle who, with a host of admirers to choose from, had married unwisely, but for love, and had lived to suffer the consequences if not to regret it. Now she is reduced to shabby lodgings in a dingy back alley which she shares with her son, who too greatly resembles his father in his irresponsible roving disposition, and her daughter, crippled from childhood and inordinately shy. Looking ahead, Amanda, the mother, can see but little hope for her daughter Laura's welfare unless a suitable husband for her can be discovered; but how this can happen when Laura is so shy and sensitive, so given to lavishing all her affection on her collection of little glass animals, is a problem indeed. Tom, the son, is constantly urged, even implored, to do something about it; and eventually gives indication of progress—a chap from the warehouse, where both are employed, has accepted an invitation to supper. Great, and extravagant, preparations are made. Amanda brings out all her treasured old-time finery. But, alas, when the party is over, it transpires that Tom had failed to learn that his friend already had a girl of his own. But—maybe someone more eligible will turn up. Though the play is essentially Miss Taylor's, all three of her associates share in the honors—Mr. Dowling as Tom, Julie Haydon as the pathetic Laura, Anthony Ross as the Gentleman Caller. And very shortly after its appearance *The Glass Menagerie* was

awarded the annual prize of the New York Drama Critics' Circle. The other distinguished item was a most ingenious musicalization by Oscar Hammerstein II and Richard Rodgers of Ferenc Molnar's *Liliom*, first presented by the Theater Guild in 1921, twice revived by other organizations and now again, in its new form, produced by the Guild. With its locale shifted to the New England coast in the year 1873, and with its chief character, now called Bill, turned into a big, bullying amusement park barker, the musical version, under the title of *Carousel*, gave every indication of rivaling the success of the Guild's still current *Oklahoma!* by the same librettist and composer. The principals in the cast were mainly newcomers, but very welcome ones—John Raitt as Bill, Jan Clayton as the heroine, Bambi Linn as their daughter, with Jean Darling, Jean Casto, Eric Mattson, Murvyn Vye, Peter Birch, Russell Collins and Jay Velie participating importantly. With music and lyrics of an exceptionally high order and voices that did them full justice, this fantasy took a position well above the familiar musical comedy level. The only other offering to achieve even moderate favor before the official close of the spring season was a comparatively short-lived drama by Edward Chodorov, *Common Ground*, concerned with the predicament of a troupe of USO camp entertainers trapped behind the Nazi lines in Italy. Philip Loeb, Paul McGrath and Luther Adler were its chief exponents.

These, then, were the exceptions of the earlier half of the year to the prevalent level of inferiority exemplified over the same period by nearly twice as many failures, some speedy, others of the lingering variety.

Summer found the usual broad scattering of vacational and experimental playhouses in the outlying districts everywhere commencing to benefit from the removal of at least some of the wartime restrictions that had for so long hampered their activities.

There were a few fitful but feeble efforts to get a new season under way close on the heels of the old one but summer was well advanced before any newcomer managed to secure a foothold. The first to do so was *Marinka*, a so-called "romantic musical" by George Marion, Jr., Karl Farkas and Emerich Kalman, rather stuffily presenting a somewhat idealized theory of the historic Mayerling affair. Notwithstanding a chilly reception, this subsisted until well into the fall but, oddly, made a speedy getaway very shortly after a new explanation of the "facts" of that famous episode came to light. Two other musicals in the same general old-fashioned category followed—*Mr. Strauss Goes to Boston*, exploiting an actual visit of the Waltz King to that city, and *Polonaise*, which utilized the personality of the Polish-American patriot, Kosciuszko, in a setting of airs by Chopin. The former tarried very briefly; the latter stayed the year out with Jan Kiepura contributing one of his stilted and heavy-handed portrayals in the chief role, and Marta Eggerth more happily cast in the opposite part. The first non-musical item to develop durable qualities was *You Touched Me*, a slender, unimportant but fairly ingratiating comedy by Tennessee Williams and Donald Windham, founded on a story by D. H. Lawrence, for the success of which the presence in its cast of Edmund Gwenn, Catherine Willard and Montgomery Clift was in large part responsible. Then came the season's first genuinely serious drama, *Deep Are the Roots*, by Arnaud d'Usseau and James Gow, concerned with, though not attempting to solve, the problem of the

Negro returning from distinguished service in the war to the same Southern white man's home from which he had responded to his country's call. Herein the acting honors went to Gordon Heath as the soldier, to Barbara Bel Geddes and Carol Goodner as the daughters of the white landowner, and Charles Waldron as their Senator father. Meanwhile, interspersed among the few offerings that emerged with varying degrees of credit, others, in the ratio of approximately three to one, arrived and departed in short order, a state of affairs that persisted until close to the end of the year.

Merely moderate success attended Thomas Job's *Therese*, a melodrama adapted from Zola's *Therese Raquin*, wherein Eva LeGallienne and Victor Jory enacted the guilty lovers and murderers while chief honors fell to Dame May Whitty for her portrayal of the speechless paralytic mother of their victim who eventually brings their crime to light. But a revival of the early Victor Herbert operetta, *The Red Mill*, with Eddie Foy, Jr., Michael O'Shea and Dorothy Stone, daughter of one of its original producers, in the principal roles, achieved a positive triumph. Fay Bainter returned to the New York stage, but for only a very short stay, in an ill-starred piece by Mary Chase, author of the highly successful *Harvey*, entitled *The Next Half Hour*. Another player long identified with the screen who was welcomed back from Hollywood in a drama that failed to measure up to the occasion was Spencer Tracy, who figured in the leading part in Robert E. Sherwood's *The Rugged Path*, a rambling war item that suggested its author had grown a bit rusty. Then another musical, called *Are You With It?*, quietly dropped in, promptly caught the popular fancy and, with Joan Roberts, *Oklahoma*'s original Laurey, as its bright particular feature, succeeded in holding it.

Not until mid-November did any new offering meet with general, but not even then unqualified, acclaim. This occasion was the latest opus by Howard Lindsay and Russel Crouse, *State of the Union*. A skilful blend of the serious and the humorous, the piece concerned the course of a Presidential campaign, just in the future, in which the candidate, from the political aspect, was on the order of the late Wendell Willkie. Ralph Bellamy capably filled this role, Ruth Hussey that of the candidate's wife, and Myron McCormick, Minor Watson and Kay Johnson the parts of next importance. A first play by Harry Brown, *A Sound of Hunting*, was adjudged an artistic success but tarried only briefly. Other late arrivals of varying degrees of excellence which at least remained current to the end of the year included *The Day Before Spring*, a musical depicting a college reunion; *The Mermaids Singing*, a comedy by John van Druten whose chief distinction lay in the fact that it was the third in a trio of current works by that playwright; *Strange Fruit*, a dramatization, something less than expert, by Lillian and Esther Smith of the former's much-discussed novel on the Negro problem from the angle of miscegenation; an inconsiderable farcical item by Joseph Fields and Jerome Chodorov entitled *The French Touch*, featuring Brian Aherne and Arlene Francis; another, *Brighten the Corner*, by John Cecil Holm, exploiting the familiar comic abilities of Charles Butterworth and disclosing unsuspected gifts of drollery in Lenore Lonergan in her first adult manifestation; Maurice Evans' revised production of *Hamlet*, speeded up, rendered more concise and less mediaeval, in the manner which his recent experiences in purveying entertainment to the GI camps in Europe had shown him was most ac-

ceptable to men of action; a novel comedy-fantasy, *Dream Girl*, written by Elmer Rice, providing his wife, Betty Field, with an exceptionally long and varied role; one more sprightly new musical item, *Billion Dollar Baby*, by the same contributors responsible for the year-old hit, *On the Town*, this time with Joan McCracken, another *Oklahoma* alumna, for its featured performer; S. N. Behrman's latest output, *Dunnigan's Daughter*, presented by the Theater Guild as its first offering of the season but regarded as considerably below its author's standard—Dennis King and June Havoc in the chief roles; a noteworthy revival, by a new and non-profit producing organization, Theater Incorporated, of Bernard Shaw's highly entertaining *Pygmalion* with a cast headed by Gertrude Lawrence and Raymond Massey and with Cecil Humphreys, Melville Cooper and Katherine Emmet as associates; and, finally, another first play by an author new to the stage, Arthur Laurents, in *Home of the Brave*, a promising, if somewhat confused, drama on a phase of the late war.

London, throughout the year, suffered from one of the same ironical difficulties that New York was likewise experiencing—the continuing popularity of a large number of long-run productions that precluded, for lack of sufficient theaters, the presentation of anything like the normal quota of new works, and this despite the fact that about thirty houses were in virtually continuous operation. One novelty, however, that did succeed in forging to the front was Emlyn Williams' drama of Welsh life, *The Wind of Heaven*, an uncommonly inspiring piece with a strongly spiritual flavor, whose chief roles were taken by the author himself, Diana Wynyard and Mehs Jenkins, a Welsh actress. Other items of British origin to get a hearing included a musical, *Strike It Again*, with Sidney Fields as leading comedian; a revival of *Yellow Sands* with Sir Cedric Hardwicke, Daphne du Maurier's *The Years Between*, a rather heavy-handed treatment of the Enoch Arden theme as applied to wartime; a piece called *No Medals* featuring Fay Compton; *Perchance to Dream*, another musical, starring Ivor Novello; *Lady from Edinburgh*, with Richard Bird and Sophie Stewart in the chief roles; *The Gay Pavilion*, with Mary Ellis; and a thriller, *The Shop at Sly Corner* in which Cathleen Nesbitt was the principal performer. In addition a number of American successes were imported, with varying fortunes. Thornton Wilder's *The Skin of Our Teeth* rather puzzled London, and Vivien Leigh was regarded as less effective in the part of Sabina than its American exponent, Tallulah Bankhead; *Arsenic and Old Lace* prospered with Lillian Braithwaite and Mary Jerrold as the placidly homicidal Brewster "girls"; the Franz Werfel-S. N. Behrman *Jacobowsky and the Colonel* created a less favorable impression than it had done in New York. Karel Stepanek and Michael Redgrave respectively filled the two title roles, with Rachel Kempson as the girl. *Tomorrow the World* proved nearly as gripping and *Three's a Family* quite as amusing as Americans had found them. Evelyn Laye was charming in *Three Waltzes*, and both Irwin Shaw's *The Assassin*, dealing with the Admiral Darlan incident, and Terence Rattigan's *While the Sun Shines* were received with greater favor than New York accorded them. *Chicken Every Sunday*, as presented by Firth Shepherd, was well liked, but the dramatization of *A Bell for Adano* failed to appeal to British audiences.

The annual Shakespeare Festival at Stratford comprised seven works of the Bard—*Much Ado*

About *Nothing*, *Antony and Cleopatra*, *The Merry Wives of Windsor*, *King Henry VIII*, *Twelfth Night*, *Romeo and Juliet*, and *Othello*, besides Goldsmith's *She Stoops to Conquer*. In the course of the six-month season the American actress, Clare Luce, contributed especially commendable portrayals of Beatrice and Cleopatra. Manchester, in midsummer, witnessed the premiere of Noel Coward's new revue, *Sigh No More*, and found it characteristic yet disappointingly below standard. Joyce Grenfell, Cyril Ritchard and Madge Elliott were the outstanding performers. Back in London *As You Like It* was given an open-air presentation in Regent's Park, and Ibsen's rarely played *Little Eyolf* was seen with Walter Hull and Lydia Sherwood in the leading roles. An important and highly successful July offering was Norman Ginsbury's *The First Gentleman*, an engrossing blend of comedy and tragedy with the Prince Regent who subsequently reigned briefly and in profligate fashion as George IV for its central figure. Robert Morley gave a brilliant rendering of this character, ably seconded by Wendy Hiller as his daughter, Charlotte, who, but for her untimely death, might have been England's queen in place of Victoria. The musical, *By Jupiter*, from America, scored a substantial hit, and Robert Donat seized an opportunity to do a new Lancashire comedy, *The Cure for Love*, by Walter Greenwood. The Old Vic company, again headed by Ralph Richardson and Laurence Olivier, opened their second season of repertory at the New Theater with a notable innovation in producing both Part I and Part II of Shakespeare's *King Henry IV* in quick succession. Mr. Richardson was revealed as an uncommonly distinguished Falstaff in both, while Mr. Olivier covered himself with glory by his portrayals of Hotspur in the former and Justice Shallow in the latter. To these were later added a no less memorable presentation of Sophocles' *Oedipus Rex*, in a new, concise version by W. B. Yeats, wherein Mr. Olivier added still further to his laurels. With it, as an afterpiece, Sheridan's *The Critic* was played, Mr. Olivier appearing as Mr. Puff. Late in the fall a new drama by James Bridie, *The Forrihan Reel*, was hailed as quite crazy but nevertheless highly entertaining.

Dublin, meantime, saw the new season at the Abbey Theater open with Brinsley MacNamara's *Marks and Mabel*, a sequel to his earlier *Look at the Heffernans* and no less rich in Irish character and humor. Many of the Abbey's well-known veterans were in the cast as well as several newcomers. The Gate Theater, on the other hand, had abandoned the native drama in favor of outstanding plays of authors from various lands, such as Ibsen's *Lady from the Sea*, in which Christopher Casson, son of Dame Sybil Thorndike, and Eve Watkinson took the chief parts. Later, still another Dublin playhouse tempted fate with *The Skin of Our Teeth*, which not only was taken seriously but gave rise to a controversy of conflicting opinions that, far from fostering interest in the piece, brought about its withdrawal at the end of the first week. The highlight of the Summer Festival at Killarney was Seamus White's *The Cardinal and the Crows*, to which the coveted trophy was awarded.

Paris welcomed a hit early in the year in *Une Jeune Fille Toute Simple*, by Andre Roussin, an actor, but, in the state of transition and general uncertainty in France, did very little toward developing new talent in either playwriting or acting.

Similarly, Moscow, despite both her traditional love for the drama and her reversion from propa-

gandist plays to those presented solely for entertainment, was stagnating insofar as any new experimental work of importance was concerned. Virtually no new native works came to light and there was very little acting of the high order formerly maintained by the Moscow Art Theater. But Russian and other classics, Shakespeare in particular, and contemporary dramas from other countries, among them Lillian Hellman's *Watch on the Rhine* and *The Little Foxes* from the United States, prospered exceedingly. So, likewise, did a revival of *Mademoiselle Nitish*, a musical item in a French setting.

RALPH W. CAREY.

TIBET. A dependency of China in central Asia. Area, 463,000 square miles; population variously estimated at from 700,000 to 6,000,000. Capital, Lhasa, 50,000 inhabitants. Lamaism, a development of Mahayana Buddhism, is the religion of the people. Chief occupations: agriculture, stock raising, wool spinning, and knitting. The principal minerals are gold, borax, and salt. There is a factory for the manufacture of army equipment, uniforms, coins, and paper money. Trade is carried on with China and India.

Civil and religious authority is vested in the Dalai Lama, acting through a Prime Minister appointed from among the principal Tibetan lamas. The latter is assisted by a grand council of four members. The 14th Dalai Lama is a Chinese peasant boy selected in 1939 as the reincarnation of the 13th Dalai Lama who died in 1933. Enthroned Feb. 22, 1940 (see YEAR BOOK for 1940), he took the name of Jampel Ngawang Lobsang Yishey Tenzing Gyatso. During his minority, supreme power remains in the hands of the regent who assumed control when the 13th Dalai Lama died.

TIN. The United States continued to live on short tin rations in 1945, supplementing its meager diet with imports and reclaimed scrap, and eagerly eyeing the possibility of getting back to its big prewar resources in Malaya, the Netherlands East Indies, Siam, and possibly China.

When war cut off its access to the Far East, the United States had accumulated a stock of 157,227 long tons of tin in ore, concentrates and pig tin, the largest in its history. Since, imports never have equalled highly restricted consumption, this stock dwindled to 60,000 long tons, taking into account all supplies. Tin was carefully doled out and uses limited under War Production Board (formerly Office of Production Management, recently Civilian Production Administration) Order M-43. Consumption, including secondary tin, in 1941 was 135,789 long tons; in 1942, 86,096 long tons; in 1943, 81,840 long tons; in 1944, 90,352 long tons; and in 1945, 92,000 long tons. During the war period, from 32 to 40 percent was used in the production of brass and bronze, employed heavily in munitions manufacture, with an equal or somewhat smaller amount consumed in producing tinsplate and terneplate. During immediate prewar years, tinsplate and terneplate manufacture required approximately twice as large a quantity, and solder slightly more, than brass and bronze. On Nov. 19, the use of tin cans was eased to permit packing of 190 types of products instead of 139, and on Dec. 17 very slight relaxation was made in other permissible tin uses. Unless tin is more rapidly available from the Far East than appears probable, the Government stated that continued restrictions may be expected. Were restrictions lifted, consumption in 1946 might be estimated to

reach 120,000 tons because of increasing maintenance and reconversion requirements.

Imports during the war period comprised principally (1) concentrates from Bolivia at an annual rate of about 20,000 long tons, with the exception of 1944 when 28,730 long tons, and 1945 when 32,550 long tons, were imported; and (2) pig tin and some concentrates from Belgian Congo totaling 11,224 tons in 1942, 15,646 in 1943, 17,549 in 1944, and a probable 13,650 long tons in 1945. China was able to contribute 3,338 long tons in 1944 and 1946 in the January-June, 1945, period. Inconsequential amounts came from Argentina, French Cameroons, Mexico, and Portugal, and less than 10 tons a year from domestic mines.

Low and medium grade Bolivian concentrates were blended with high grade material from Belgian Congo and some from the French Cameroons to feed the Government owned tin smelter at Texas City, Tex., which furnishes high grade metal. Built to meet war needs, this smelter produced 15,695 long tons of metal in nine months of operation in 1942; 20,727 in 1943; 30,619 in 1944; and close to 41,000 in 1945.

Production of secondary tin from scrap was helped along by collection of tin cans from householders, which ceased, except for very large users, on Oct. 12. Secondary tin production ranged from 25,000 to 28,000 long tons during the war period.

Although many of the mines and smelters in the Far East were found at least partially intact after the Japanese eviction, necessity of assembling crews, repairing and replacing equipment, and providing supplies is expected to prevent production of consequence until mid-1946, and full scale production until mid-1947 or 1948.

C. T. Post.

TOGO, French. The part of Togo mandated to France by the League of Nations. Area, 21,893 square miles. Population (1938), 780,497. Capital: Lomé (14,380 inhabitants). The main products are cocoa, palm oil, copra, coffee, and cotton. Trade (1939): imports 91,644,000 francs; exports 74,227,000 francs (franc averaged \$0.0251 in 1939). Budget (1939): 50,534,000 francs; in addition, the railway budget was 12,889,000 francs. Railways (1940): 242 miles. Shipping (1938): 386 ships cleared the ports of Lomé and Anecho.

TOKELAU (Union Islands). A group of islands (Faka-ofu, Nukunono, Atafu) in the Pacific (8° to 10° S. and 171° to 173° W.), formerly part of the Gilbert and Ellice Islands colony, transferred to the jurisdiction of New Zealand on Feb. 11, 1926. Area: 4 square miles. Estimated population (June, 1942), 1,364. The Government was under supervision of the administrator of Western Samoa.

TRACK AND FIELD ATHLETICS. With most of this country's great stars in the service, interest in track and field dipped to its wartime low last year. The sport turned in a number of surprises early in the indoor season when Gunder Haegg, famed Swedish runner, paid his second visit here and suffered a series of reverses. Gunder the Wonder, who had raced all opposition into the ground on his 1944 trip, was unable to get into condition and won only one mile event, that in Cleveland when he defeated Forest Efav in 4:16.7.

However, his losses in the United States were no indication that the Flying Fireman was slipping, for Haegg and Haakan Lidman, the noted hurdler who accompanied him, had to overcome all kinds of hardships before reaching this country, the trip

requiring a full month. Later in the year, at home in Sweden, Haegg whipped back into condition and regained his prestige when he ran a mile in 4:01.4 for a new world record, beating his old rival Arne Andersson, holder of the listed mark of 4:02.4.

The big story of track broke quite late in the year when the Swedish Athletic Association brought professional charges against Haegg, Andersson and thirteen other native stars. Lennart Strand, a newcomer who beat Andersson in the Swedish national 1,500-meter run last Summer and later outlegged both Haegg and Andersson in the mile, was not listed among the accused athletes. Late in March, 1946, the Swedish A.A. ruled Haegg and Andersson out of amateur competition for life, but allowed their marks to stand in Swedish record books. Seven others of the accused athletes drew lighter penalties.

With the mile event still the blue-ribbon classic of foot racing despite the absence of the former headliners, little Jimmy Rafferty of the New York A.C. was America's standout. Rafferty, formerly an 880 man, captured seven consecutive mile tests. His best effort came in the Millrose A.A. meet when he was clocked in 4:13.1.

Gil Dodds, who dominated the indoor mile events the previous season, took part in only one meet, racing to a triumph in a two-mile race at the Boston Y.M.C.A. games before announcing his retirement for a preaching career.

Lidman, who had a little more luck than Haegg on their journey to the States, winning several times, proved his mettle in a meet at Camp Endicott in Rhode Island where he skimmed over the high barriers to set a new world indoor standard of 0:14.4 for 110 meters.

The National Amateur Athletic Union outdoor championships, held at Randalls Island in New York, lacked the color of other years, but proved interesting from a competitive standpoint. The games marked one of the few defeats suffered by Rafferty in 1945 when the Winged Foot ace ran a bad sixth in the 1,500-meter grind. Roland Sink, Navy trainee at Harvard, easily captured the event. Bob Kelley of Illinois and Dr. Arky Erwin of New Orleans were the only defending champions in the track competition and both were successful, Kelley keeping his 800-meter crown with a 10-yard victory and Erwin scoring easily in the 400-meter hurdles. In the field events, only the veteran Henry Dreyer of the New York A.C. was able to repeat, winning the hammer throw. Hank gained distinction as the meet's only double victor when he took the 56-pound weight throw. The New York A.C. retained team honors, just as it had done in the A.A.U. indoor games. Dreyer also repeated in the 35-pound weight throw indoors.

Barney Ewell of Camp Kilmer, N. J., was among the season's consistent scorers. After capturing honors in the 60-yard sprint and running broad jump in the national A.A.U. Winter meet, Ewell triumphed at 100 meters on Randalls Island.

A powerful Naval Academy squad retained its I.C.4-A championship outdoors, rolling up a record 85½ points to defeat Army, which finished second ahead of N.Y.U. John B. Van Velzer, the best sprinter in intercollegiate circles during the year, gained the only double, taking the 100 and 220 to help the Middies amass their total. The strong Annapolis team added to its prestige when it traveled to Milwaukee in June and brought the National Collegiate Athletic Association championship East for the first time in the 24-year-old history of the games. Van Velzer annexed only the 100 in that meet, but Navy placed enough men to roll up

TABLE I—U.S. EXPORTS: * 1945 AND 1944
[In thousands of dollars; adjusted to nearest thousand]

62 points and dethrone Illinois, which was second with 57%.

Army again won the I.C.4-A crown indoors, with 73½ points to 55½ for Navy, both teams passing the old scoring mark for the games. Van Velzer added the 60-yard dash title to his growing collection in that meet.

Tuskegee Institute won team honors in the women's national A.A.U. indoor and outdoor meets. Miss Alice Coachman, top scorer of the champions, annexed the 50 and 100-meter sprints and the high jump outdoors. Miss Stella Walsh, Olympics ace from Cleveland, was a double victor, capturing the 200-meter dash and the broad jump. Miss Walsh, who holds some 60 world marks for women, cut her universal 100-meter standard to 0:11.2 in June. Competing in the Northeastern Ohio A.A.U. championships at Cleveland, she beat her recognized standard by three-tenths of a second.

Track and field proved one of the most popular sports among our service men overseas and with the defeat of Germany a number of really colorful events were put on. The late Gen. George S. Patton, Jr., saw the first big meet, which was held at Nuremberg. Later, American, British and French troops staged a "Little Olympics" before 15,000 in the Berlin Olympic stadium. Sgt. Edward J. Walsh, former Manhattan College star, helped the Americans roll up the top total of 94 points by winning the 1,500-meter run and racing with the victorious medley relay four.

The Fifth Army forces annexed the title in the Mediterranean area, but lost to the ETO squad by a score of 69 to 54 later at Frankfort-on-Main in Germany.

THOMAS V. HANEY.

TRADE, Foreign. The foreign trade of the United States during the full 12 months of 1945 showed a marked decline in value when compared with the returns of foreign trade for the same period of 1944.

Exports. Total value of all exports of domestic and foreign merchandise, including Lend-Lease exports, for the 12 months of 1945 amounted to \$9,805,875,000, as compared with \$14,257,277,000 for the same months of 1944. Lend-Lease exports represented 57 percent of the total exports for the 12-month period of 1945 and 79 percent for the like period of 1944. Monthly export totals for 1945 and 1944 are presented in Table I. The total shipping weight of exports for the January to the end of December of 1945 was 187,398 million pounds, as compared with 187,090 million pounds for same period of 1944.

Imports. General imports into the United States

during the 12-month period, January to December, were valued at \$4,135,992,000 for 1945 and \$3,920,612,000 for the same period of 1944. The total shipping weight of imports into the United States for the 12 months was 122,346 million pounds for 1945 and 119,307 million pounds for the equivalent months of 1944. Monthly returns of United States imports are presented in Table II.

TABLE II—U.S. IMPORTS: 1945 AND 1944

* General imports include entries for immediate consumption and entries into bonded warehouses. ^b Imports for consumption include entries for immediate consumption and withdrawals from bonded customs warehouses for consumption.

TRANS-JORDAN. An Arab territory lying east of Palestine and south of Syria. Together with Palestine it was turned over to Great Britain as a Class A Mandate on Sept. 29, 1923. Area, 34,700 square miles. Capital, Amman.

Government. Originally Trans-Jordan was administered as part of the Palestine Mandate. However, the stipulations concerning Jewish immigration were not to apply to Trans-Jordan, which is thus closed to Zionist colonization. An autonomous Arab administration was recognized under the Emir Abdullah (son of the late King Hussein of the Hejaz) whose government must operate within the framework of the mandate. The High Commissioner for Palestine holds the same office for Trans-Jordan, and is represented in Amman by a British Resident. The Emir is assisted by a Council of Ministers and a Legislative Assembly. The defense of the country is entrusted to the Trans-Jordan Frontier Force and the Arab Legion.

Events, 1945. Trans-Jordan did not figure prominently in the news during 1945. The Emir Abdullah continued, as before, to oppose the creation of a Jewish state in Palestine. On Dec. 29, 1944, he declared that he would actively resist further Jewish immigration into the Holy Land and warned that

trouble would be inevitable if Britain withdrew from that country or failed to uphold the policy laid down in the White Paper of 1939. Late in July leaders of four of the six Arab parties in Palestine met with the Emir in Amman, in an effort to re-establish the Arab Higher Committee which had been suppressed by the British before the war. The Emir even suggested that the chairmanship of the recreated body be given to his old political foe, the Grand Mufti of Jerusalem. However, the latter had been handed over to the Allies by the Swiss Government and there was no indication that he would be allowed to return. On Oct. 22 Abdullah declared that the situation was obviously deteriorating and reminded the outside Powers that Palestine belonged to the whole Arab world.

For a number of years Abdullah had been proposing the creation of a Greater Syria, consisting of Trans-Jordan, Palestine, Lebanon, and Syria—of which he would be the ruler. For this reason he was thought to have given only lip service to the ideal of Pan Arabia. When Ibn Saud definitely came out for the latter in January, Abdullah, Ibn Saud's old rival, was reported to be even less enthusiastic about the Pan Arab movement. However, Trans-Jordan was represented at the Cairo Conferences which created the Arab League and has pursued a policy of solidarity with it since its creation.

Not being an independent state, Trans-Jordan could not be invited to San Francisco. There were indications, however, that in the near future Britain might take positive steps to confer real independence upon the country.

The People. The population is around 400,000, almost exclusively Arab. Many are nomads, for there are few towns and no large cities in the country. The people are Moslem except for some 50,000 Christians. Before the war there were 191 schools with 13,854 pupils.

The Economy. Most of the area is desert or semi-desert. Only in the western part is agriculture possible, and even there it is precarious. Irrigation could work wonders on the country's productivity but few sources from which water could be obtained are available. In 1942 record crops of 200,000 tons of wheat and 100,000 tons of barley were reported. The terrain and climate are adapted to raising sheep and goats.

There is very little international trade in or out of the country. The Hejaz Railway runs through Amman as far south as Ma'an, beyond which point it has been abandoned. Under the mandatory regime several modern highways have been constructed, notably one connecting Palestine with Iraq.

ROBERT GALE WOOLBERT.

TREASURY, U.S. Department of the. A Department of the U.S. Government which was composed in 1945 of the following principal branches.

- Bureau of the Comptroller of the Currency
- Bureau of Customs
- Bureau of Engraving and Printing
- Bureau of Internal Revenue
- Bureau of the Mint
- Bureau of Narcotics (see NARCOTIC DRUGS CONTROL)
- Committee on Practice
- Division of Monetary Research
- Division of Personnel
- Division of Research and Statistics
- Division of Tax Research
- Legal Division
- Office of the Chief Clerk
- Fiscal Service
- War Finance Division
- Foreign Funds Control
- Office of Superintendent of Treasury Buildings
- Procurement Division
- U.S. Secret Service
- Office of the Tax
- Legislative Counsel

The Secretary of the Treasury in 1945 was Fred M. Vinson; Under Secretary, Daniel W. Bell. See the separate listing of important bureaus; **BANKS AND BANKING**; **FINANCIAL REVIEW**; **PUBLIC FINANCE**; **TAXATION**; **SILVER**.

TRUK. A former Japanese naval base in the west central Pacific, comprising a cluster of islands (151° 22' E. and 6° 57' N.) in a lagoon surrounded by coral reefs (32 miles across from east to west), in the eastern Caroline group of the mandated Japanese Pacific Islands (q.v.). Area, 51 square miles. Civil population (1938), 17,133. There are 245 islands in all, the chief being Dublon (3 miles long), Fefan, Moen, Tol, Udot, and Uman. The islands, of volcanic and coral formation, are for the most part high, and offer good protection and safe anchorages for ships. Truk passed under the control of Allied armed forces following the surrender of Japan in 1945.

TUNNELS. With peace established and men and materials once more available there are several tunnel projects ready for starting or renewal of construction. A number of these are included in current water supply and irrigation projects. New machines and methods have expedited the rate of advance and further improvements are to be expected. One new idea is welding instead of bolting the joints in steel-plate lining, thus making the lining watertight. Projects for tunnels of extreme length are headed by those for bringing Colorado River water to irrigate the elevated plateau of Arizona, where alternative routes require 139 or 72 miles of tunnel. The lengths of individual tunnels to make up these figures are not yet determined. There is also a project for a 30-mile tunnel through the Cascade Mountains for highway communication between two sections of the Pacific State of Washington.

To bring water from the Pacific slope for irrigation of the eastern slope of the Rocky Mountains, the 13-mile Continental Divide tunnel (halted in January) was resumed in May, for expected completion in May, 1946. It will be 9 ft. 9 in. in diameter. A similar but longer project, to bring water from the Pacific slope for the domestic supply of Denver, Colo., includes a 23-mile tunnel through the Divide. It will be 9 ft. in diameter. A pilot or exploratory bore 6½ x 7½ ft. has been completed for 386 ft., driven at the crown of the future larger tunnel. As part of the new Delaware River water supply for New York City, a 26-mile tunnel may be driven to tap the East Branch, supplementing the 83-mile main tunnel, already completed. The tunnel being driven by the U. S. Bureau of Mines to drain mines in the Leadville district of Colorado (now halted by lack of funds) has been completed for 6,600 ft. out of a total of 17,300 ft., including two branches of 3,400 and 2,400 ft. It is 9 ft. wide and 10½ ft. high, with its portal at Elev. 9,957.

The north tube of the Lincoln Tunnel under the Hudson River at New York was opened February 1. The Brooklyn-Staten Island tunnel will be begun as soon as its financing can be arranged, and its construction will take about five years. Work on the Battery-Brooklyn tunnel (20 per cent completed) was resumed in November and may be completed in three years. It was started in 1941 but halted in 1942. At Houston, Texas, two highway tunnels under the Ship Canal are proposed, financed by a bond issue of \$5,000,000 by the Houston Navigation District. Galveston has a similar project for communication with the main-

land. Boston may duplicate the present harbor tunnel to East Boston, owing to increasing traffic. At Norfolk, Va., a submarine tunnel is planned to connect with Portsmouth. At San Francisco, Broadway is to be extended through Russian Hill by a tunnel 2,014 ft. long, having twin concrete tubes each with a 22-ft. road and 5-ft. walk. The Penn-Lincoln Parkway in Pennsylvania will pass through the Squirrel Hill section of Pittsburgh by twin two-lane tunnels a mile in length. Ventilation for removal of carbon monoxide gas in highway tunnels is considered necessary for even short tunnels, and at Washington, D. C., a grade separation subway 225 ft. long has fans for this purpose, the fans start to operate only when the air becomes foul.

Railroad tunneling has been mainly on improvement work. The new Tennessee Pass tunnel of the Denver & Rio Grande Western, 2,500 ft., was opened in November. It is for a single track, but the old tunnel will now be enlarged to take modern locomotives and cars. On the Baltimore & Ohio, 528 ft. of the old brick roof lining in the Kingswood tunnel was replaced with concrete. On account of heavy war traffic this work was done from above, by a shaft sunk to the tunnel. The Southern Pacific Railroad has enlarged a number of its old tunnels and has replaced some of the others with open cuts.

Curiosities in tunnel work include an inspection tunnel and gallery at Niagara Falls, opened to the public on August 4. Revealed after the war, a 2,500 ft. tunnel was built as an air-raid shelter at the Naval Station at Bremerton, Wash. Its main stretch is 1,650 ft., with four branches of 125 to 160 ft., one of arch section, 18 ft. wide and 12 ft. high. On the South Pacific islands the U. S. forces found tunnels 50 ft. underground driven by the Japanese for use as barracks and workshops, approached by steps or ramps. With the end of the war and the change in political and national affairs in Europe, the old but hardy perennial project for a tunnel between England and France has again been brought into the light. See AQUEDUCTS, WATER SUPPLY.

E. E. RUSSELL TRATMAN.

TURKEY. A republic comprising Asia Minor and a narrow zone in Europe along the Straits, as well as Imbros, Tenedos and the Rabbit Islands in the Aegean Sea. Area, 296,107 square miles. Capital, Ankara (Angora).

Government. The Constitution of Jan. 20, 1921, as amended in 1924 and 1934, confers both executive and legislative power on the Grand National Assembly, or *Kamutay*. This body is elected every four years by universal indirect male and female suffrage, and consists of 455 deputies. The constitutional law provides that "the Assembly exercise the executive power through the President of the Republic elected by itself and through the Council of Ministers chosen by him." The Assembly is nominally vested with power to control the acts of the Government and even to dismiss it. In reality, under both the first President, Kemal Ataturk, and the present incumbent, Ismet Inonu, there has been what amounts to a presidential dictatorship. All members of the Assembly belong to the Republican People's (or Popular) Party.

The reforms of Ataturk included a thorough revision of the judicial and legal systems. The new civil code was almost identical with that of Switzerland, the new Penal Code was largely based on that of Italy, and the Commercial Code on that of Germany.

The Turkish budget showed a steady rise in both revenue and expenditures during the war years. From £T550,209,000 revenue grew to £T901,511,000 in 1944-5 (estimated). In the latter year, ordinary expenditures were estimated at £T570,434,417 and extraordinary expenditures (mostly for defense) at £T382,000,000. The national debt also rose during these years until it was believed to be around £T1,300,000,000 by 1945.

Military service is compulsory and normally about one-half of the men liable actually serve. Following the outbreak of World War II, the precarious position of Turkish neutrality required that the army be considerably increased and that attempts be made to acquire more modern equipment, which Turkey herself does not manufacture. Some of her requirements were met by shipments of British and American arms. The Turkish Navy comprises the former German cruiser *Goeben* (rebuilt and now called the *Yavuz*) of 23,100 tons, two small and old cruisers, and various subsidiary vessels. The air force is equipped with foreign planes, chiefly German, British and American. Altogether Turkey's defense forces are, despite the absence of much necessary modern equipment, an important element in Near East politics and could, if called upon, give a good account of themselves. The Anatolian peasant has long enjoyed the reputation of making an excellent soldier, especially when on the defensive in his own hills.

Events, 1945. Economic Affairs. When Turkey broke off diplomatic relations with Germany in Aug. 1944 (see YEAR BOOK for 1944, p. 632), she inevitably disrupted her whole trade structure. Germany and the Allies had been competing for Turkish supplies, thus raising prices far above the world level. With the disappearance of the German buyers the British and Americans found it no longer necessary to engage in preemptive purchases. After V-E Day Turkey confronted the fact that the wartime era of high prices for exports was over. In fact, as early as February Prime Minister Sarajoglu was lamenting that the virtual standstill in Turkish foreign trade had resulted in marked decreases in customs duties, export taxes and other revenues.

During the latter stages of the war American goods had to a considerable extent displaced British products in the Turkish market—e.g. cotton goods, steel and iron products—due to Britain's inability to manufacture for the export trade. At the same time, British traders enjoyed a certain preferential position because of the operation of the "sterling bloc." In order to prepare for the re-establishment of commercial relations on a peace-time footing, the Turkish and British Governments entered into a trade agreement, signed in London on May 4.

During the year extensive plans were made to modernize and expand Turkey's industrial plant and communications facilities. For example, a factory to produce De Havilland airplane engines was projected near Ankara. Railway equipment and other machinery was purchased in Britain. Negotiations for the construction of several merchant ships were carried on with Canada. To replace the oil products that formerly came from Rumania, Turkey inquired into the possibilities of obtaining her supplies from the nearby fields in Iraq. Late in July the construction of a new and modern port was begun at Eregli on the Black Sea, which when completed would provide a convenient outlet for the coal mined in the Zonguldak area. The tax on exports, which amounted to some 10 per cent by the end of the war, was removed, and after V-J Day other concrete steps were taken to get Turkey's

foreign trade flowing once again, particularly within the sterling bloc.

Late in December the Minister of Finance presented the 1946 budget to the National Assembly, which showed estimated revenues of £T894,668,000 and estimated expenditures of £T990,572,884. The deficit was to be covered by short-term credits, treasury bonds and long-term internal loans. One of the heavy drains on the Government's resources was the standing army of a million men still kept on a war footing. He expressed confidence that the danger of inflation was past and revealed that during the next few years Turkey planned to spend some £T900,000,000 on the purchase of machinery and equipment.

Domestic Politics and Social Reform. During the year there were several indications that the monopoly of the People's Party over Turkish political life might be broken, or voluntarily dissolved. On May 19 President Inonu declared, on the occasion of the twenty-sixth anniversary of Ataturk's landing in Anatolia, that in the near future democratic principles would receive wider application in the country's intellectual and political life. General dissatisfaction with the one-party set-up had by then become widespread. In July legal steps were taken to found a new political group called the "National Regeneration Party."

President Inonu opened the new session of the National Assembly on Nov. 1 with a significant speech reiterating his previous promise to effect certain reforms. In particular he stated that the law on the press and associations would be liberalized, and that the coming elections of 1947 would be held with a direct and secret ballot. In the past members of the National Assembly had been indirectly elected by "colleges of electors" who in turn were chosen by the primary voters. This method of election had helped assure the monopoly of the People's Party. In December former Prime Minister Jela Bayar announced the formation of a party dedicated to Kemalist doctrines and policies but differing in its interpretation of these from that of the official party. Meanwhile there had emerged three new left-wing newspapers, one daily and two weeklies. Many Turks were anxious lest this new liberal policy might open the door to Soviet-sponsored parties, such as the Tudeh in Iran.

A far-reaching social reform was enacted by the National Assembly when it passed the Land Reform Bill in June. Under the terms of this act large estates were to be broken up into smaller lots varying from twelve to 1,200 acres, depending on the nature and location of the land. Owners of expropriated land were to be amply reimbursed with government bonds. It was estimated that a million families, or one-third of the rural population of the country, would benefit—families which hitherto had relied on share-cropping or day labor for their livelihood. In order to carry these and other reforms into effect the Government created an independent Ministry of Labor.

Turkey Enters the War. In compliance with requests from Britain and the United States, Turkey broke off diplomatic relations with Japan on Jan. 4. At the same time the process of driving the Nazis out of the Balkans had reached the point, despite the presence of a few hold-out Axis garrisons on certain Aegean islands, where the Allies could use the Straits. This meant that material for Russia could now follow a short, all-water route direct to Soviet ports, thus eliminating the roundabout route via the Persian Gulf and the Trans-Iranian Railway (see IRAN).

At the Yalta Conference in February the Big

Three had made it plain that neutral states desiring to attend the San Francisco Conference of the United Nations must present, as the price of admission, a declaration of war against Germany and Japan before Mar. 1. On Feb. 23 the National Assembly unanimously voted to declare war on the two Axis Powers. On the very same day Foreign Minister Saka and United States Ambassador Steinhardt signed a lend-lease agreement. Turkey's declaration of war had little military significance, for by then the Germans were retreating northwestward through Hungary. Turkey's armed forces thus did not participate in the conflict. The Turkish Ambassador in Washington signed the United Nations Declaration on Feb. 28.

The Straits Question Revived. In March it was learned that the Soviet Union had denounced its 1925 treaty of friendship, neutrality and non-aggression with Turkey as being no longer in accord with existing conditions. It was universally assumed that one of the things Russia hoped to accomplish by this move was a revision of the regime of the Straits. However, this matter was regulated by the Convention of Montreux (1936) to which some eight states were signatories and which could hence be altered only by similar multilateral action. Some observers felt that the Soviet's action was ultimately aimed not so much at Turkey as at Britain, who had always been averse to Russian control over the Straits.

The Turkish Government agreed that a revision of the treaty with Russia was opportune and awaited the Soviet's suggestions. These were said to have been delivered in Ankara in late June, and were reported in the London *Times* of June 28, 1945, as containing four demands: "(1) the retrocession to Russia of the Turkish districts of Kars and Ardahan; (2) the granting to Russia of bases in the Straits, enabling her to defend them in common with Turkey; (3) the revision of the Montreux Convention on the Straits; and (4) the acceptance by Turkey of certain changes in the Balkans in favour of some of the smaller States."

This turn of events led Foreign Minister Saka to stop in London en route home from San Francisco and confer with Foreign Secretary Eden. The Turks evidently hoped for support from the British and American delegations at the Potsdam meeting, where the Straits issue figured prominently on the agenda. However, the Potsdam statement was silent about Turkish matters, and this naturally disappointed the Turks. Nevertheless the Straits problem was discussed there, with the United States favoring internationalization and the Russians reportedly rejecting it. Turkey was known to be willing to accept internationalization if it did not involve any loss of her sovereignty or endanger her security.

The Straits were not discussed at the Council of Foreign Ministers held in London during late September and early October. In revealing this fact on Oct. 10, Secretary of State Byrnes nevertheless acknowledged that at Potsdam President Truman, Prime Minister Churchill and Premier Stalin had secretly agreed to have their governments negotiate separately with Turkey concerning the question. The American proposals for revising the Montreux Convention were said by Mr. Byrnes on Nov. 7 to embody the following principles: (1) The Straits to be opened to the merchant vessels of all nations at all times; (2) the Straits to be opened to the transit of the warships of Black Sea powers at all times; (3) except for an agreed limited tonnage in times of peace, passage through the Straits to be denied to the warships

of non-Black Sea powers at all times except with the specific consent of the Black Sea powers, or except when acting under the authority of the United Nations; (4) Certain changes to modernize the Montreux Convention, such as the substitution of the United Nations Organization for the League of Nations and the elimination of Japan as a signatory.

Widening Rift with Russia. The closing weeks of the year saw relations with the Soviet Union become steadily more strained. The treaty of friendship, neutrality and non-aggression, which Moscow had denounced in March, expired on Nov. 7 without a new treaty having been negotiated to take its place.

On Dec. 4 university students in Istanbul staged riotous demonstrations during which the premises of two left-wing newspapers and a bookshop owned by a Soviet citizen were damaged. In reply to pointed Russian protests, the Turkish authorities denied that the outbreak in any way had governmental approval, or that it was anti-Russian in aim. An official Turkish note expressing this denial was rejected by the Soviet Government.

Meanwhile the Turks were becoming alarmed at Russia's intervention in the Iranian Province of Azerbaijan (see IRAN) and at her support of Armenian nationalist agitation for the incorporation of northeast Turkey into the Armenian Soviet Republic. At the moment the Big Three were assembling in Moscow on Dec. 20 a letter by two members of the Georgian Academy of Science, printed in the principal Soviet newspapers, demanded that Turkey cede a considerable area adjoining the Russian Caucasus. According to this letter, the area in question stretched 180 miles west of Batum along the Black Sea coast of Turkey and as deep as 75 miles—thus including the important city of Trebizond. The letter charged that this region had been taken from Georgia in the sixteenth century, and pointed out that the Kars and Ardahan districts had been in Russian possession as late as 1921.

These demands, which were assumed to have official support, created a first-class diplomatic storm that hung heavily over Russo-Turkish relations at the end of the year. The Turks of course indignantly denied the Soviet claims and clearly indicated that they would go to war rather than surrender any of the disputed zone. Foreign observers were strongly inclined to regard Russia's "war of nerves" on Turkey as merely part of a wider plan to create buffer areas around the strategically vital Caucasus oil fields—in line with the analogous Soviet policy of supporting buffer states in eastern and southeastern Europe.

Characteristics of the Population. The population on Oct. 20, 1940, was 17,820,950, of which 1,516,005 lived in European Turkey. The rate of increase is high, so that by the end of 1945 there were probably some nineteen and a half million inhabitants in the country. The principal cities, with their 1940 populations are: Istanbul, 793,949; Izmir (Smyrna) 183,762; Ankara, 157,242; Adana, 88,119. Turkey is preeminently a rural country. After World War I she was deprived of almost all areas inhabited by non-Turkish elements, so that only a few national or religious minorities still remain within the country. These are chiefly Greeks, Armenians, Kurds and Circassians. Islam was disestablished as the state religion shortly after the First World War, but most Turks still profess it as their religion. The 1935 census provided the following figures: Moslems, 15,838,673; Orthodox, 125,046; Jews, 78,730; Georgians, 44,526; and Roman Catholics, 32,155.

The educational system has been thoroughly reformed under the Republic. Primary education is nominally compulsory for both boys and girls. Education at all levels is under the supervision of the Ministry of Public Instruction, even that given in the schools of the non-Moslem communities. In 1941 there were 10,948 primary schools; 252 secondary schools; 193 lycées, normal and professional schools; and 20 institutions of higher learning. Among the latter are the State University of Istanbul and Robert College, an American-founded institution near that city. The use of the Latin alphabet was made compulsory in 1929.

The Country and Its Economy. Agriculture provides the means of livelihood for two-thirds of the Turkish people. The soil is generally fertile, but rainfall is often deficient and methods are primitive. Nonetheless rapid strides have been made in recent years to improve agricultural techniques and apparatus. The construction of new highways, railroads and factories has aided in the program of modernizing Turkish farm life.

The principal crops are indicated by the following statistics for 1942: wheat—4,369,455 hectares, 2,000,105 metric tons; barley—1,931,576 hectares, 902,095 metric tons; maize—631,132 hectares, 360,019 metric tons; cotton—326,687 hectares, 212,694 metric tons; tobacco—198,880 acres, 68,942,000 kilograms. Other large products are oats, silk, opium, figs, olives and olive oil. In 1943 the animal population was: 16,124,884 sheep, 11,815,622 goats, 7,170,930 cattle, 1,217,997 donkeys, 716,327 horses and 649,712 buffaloes. Wool and goat hair are among the country's chief exports. Unlike the other countries of the Near East, Turkey possesses valuable forest resources—some 23,000,000 acres, of which the state owns 88 per cent.

Turkey is also rich in minerals, most of them little exploited. Production figures in metric tons for 1942 were: coal, 2,509,614; lignite, 388,825; chrome, 130,053; cement, 210,853. Experts believe that the future of Turkey's mining industry is bright, particularly since it has the wholehearted support of the Government.

The state has also, since the inauguration of the first five-year plan in 1934, pushed a program of rapid industrialization. Typical of this development was the construction of the iron and steel plant at Karabuk, with an estimated annual production of 219,000 metric tons of pig iron, 229,000 tons of coke, 171,900 tons of steel ingots and 150,000 tons of rolled steel products.

Exports and imports for 1943 were, respectively, valued at £T257,000,000 and £T203,000,000. The Turks have a small but growing merchant marine. The length of the country's railway network has been expanded greatly in recent years until it now exceeds 4,600 miles, of which 95 per cent is state-owned.

ROBERT GALE WOOLBERT.

TWENTIETH CENTURY FUND. A nonprofit organization for research and public education on economic questions. The Fund was founded in 1919 and endowed by the late Edward A. Filene, Boston merchant and philanthropist. Its entire income, administered as a public trust by a Board of Trustees, is devoted to its own research and educational activities. For each major investigation the Fund appoints a special research staff and an impartial committee of qualified persons who use the factual findings of the staff as a basis for recommendations on public policy. The Fund issues its reports in book form and supplements these with news releases, pamphlets, bulletins, study outlines,

magazine articles, and other materials, including educational films and radio programs. Active contact work is maintained with organizations and educational institutions.

All the current activities of the Fund are directed toward the problem of rebuilding a sound and prosperous economic system after the strains and dislocations of war. Toward that end, the Fund is making a survey of future needs and demands for major groups of goods and services and the resources available for their production. *America's Needs and Resources* will be published early in 1946. A discussion of financial and fiscal policies has already been published as *Financing American Prosperity: A Symposium of Economists*.

Studies under way include an investigation of cartels and monopolies and of the foreign economic relations of the United States. Two new popular reports in a series of six on problems in the post-war period will also be issued, as well as a volume dealing with recent trends in collective bargaining. Recent publications of the Fund include material on housing, financial policies, collective bargaining, the power industry and distribution.

The officers of the Fund are: John H. Fahey, President; Henry S. Dennison, Chairman, Executive Committee; Morris E. Leeds, Treasurer; Evans Clark, Executive Director; and J. Frederick Dewhurst, Economist. Address: 330 West 42 Street, New York 18, New York.

ULITHI ISLANDS. A former Japanese atoll in the western Carolines, occupied by United States armed forces, Sept. 20-21, 1944. It comprises a ring of islands that surround a broad lagoon, and lies about 100 miles northeast of Yap.

UNION OF SOVIET SOCIALIST REPUBLICS (U.S.S.R.). A state occupying eastern Europe and central and northern Asia. Capital: Moscow.

Area and Population. The area as of Aug. 31, 1939, was about 8,200,000 square miles (73 per cent in Asia and 27 per cent in Europe). The census of Jan. 17, 1939, showed a population of 170,467,186 (88,802,205 females and 81,664,981 males), compared with 147,027,915 at the 1926 census. The urban population at the 1939 census was 55,909,908; rural, 124,557,278. Following the outbreak of World War II on Sept. 1, 1939, various territories (of Finland, Poland, and Rumania together with Estonia, Lithuania, and Latvia) were annexed to the Soviet Union, were occupied by German, Finnish, and Rumanian armed forces in 1941, and were freed from German occupation by Soviet armed forces and reincorporated into the Soviet Union in 1944.

The Polish territories were incorporated in the Ukrainian and Byelorussian Soviet Socialist Republics, Oct. 1-2, 1939. The Finnish provinces on Mar. 31, 1940, were joined to the Karelian S.S.R., which was then renamed the Karelo-Finnish S.S.R. and raised to the status of a constituent republic of the U.S.S.R. The major part of Bessarabia was merged with the Moldavian Autonomous S.S.R. on Aug. 2, 1940, to form the constituent Moldavian S.S.R. The remainder of Bessarabia, together with northern Bukovina, was incorporated in the Ukrainian S.S.R. Lithuania, Latvia, and Estonia were given the status of constituent republics upon annexation. The addition of these five new units raised the number of constituent republics of the Soviet Union from 11 to 16. These republics, with their capitals, areas, and populations are listed in the accompanying table.

The total area of the Soviet Union, based on the

U.S.S.R. CONSTITUENT REPUBLICS

Republics	Capital	Sq. mi.	Population
Russian S.F.S.R.	Moscow	6,444,000	109,279,000
Ukrainian S.S.R.	Kiev	223,000	40,000,000
Byelorussian S.S.R.	Minak	89,000	10,386,000
Azerbaijan S.S.R.	Baku	33,000	3,210,000
Georgian S.S.R.	Tbilisi	27,000	3,542,000
Armenian S.S.R.	Erivan	12,000	1,300,000
Turkmen S.S.R.	Ashkhabad	187,000	1,254,000
Uzbek S.S.R.	Tashkent	158,000	6,282,000
Tajik S.S.R.	Stalinabad	65,000	1,485,000
Kazakh S.S.R.	Alma-Ata	1,056,000	6,146,000
Kirghiz S.S.R.	Frunze	78,000	1,500,000
Karelo-Finnish S.S.R.	Petrozavodsk	76,000	500,000
Moldavian S.S.R.	Kishinev	13,000	2,200,000
Lithuanian S.S.R.	Vilna	24,000	2,880,000
Latvian S.S.R.	Riga	25,000	1,971,000
Estonian S.S.R.	Tallinn	18,000	1,131,000

16 constituent republics, was 8,518,000 square miles and the population was about 193,000,000. Ruthenia, also called Carpatho-Ukraine (4,886 sq. mi.; pop. 800,000) was ceded to the U.S.S.R. by Czechoslovakia on June 29, 1945, and was incorporated into the Ukrainian S.S.R. The former Japanese territories of southern Sakhalin (14,662 sq. mi.) and the Kurile Islands (3,944 sq. mi.) were made an integral part of the U.S.S.R. and nationalized (effective Sept. 20, 1945), according to a decree of the Supreme Soviet dated Feb. 2, 1946. This was in accordance with the terms of the Yalta agreement signed Feb. 11, 1945.

The populations of the 38 leading cities, including the capitals of the 16 constituent republics, are shown in the accompanying table.

POPULATIONS OF CITIES

City	Population	City	Population
Moscow	4,137,018	Voronezh	326,836
Leningrad	3,191,304	Yaroslavl	298,065
Kiev	846,293	Ivanovo	285,069
Kharkov	833,432	Archangel	281,091
Baku	809,347	Omsk	280,716
Gorky	644,116	Chelyabinsk	273,127
Odesa	604,223	Tula	272,403
Tashkent	585,005	Vilna	260,000
Tbilisi	519,175	Minsk	238,772
Rostov-on-Don	510,253	Alma-Ata	230,000
Dnepropetrovsk	500,662	Vladivostok	206,432
Stalino	462,395	Erivan	200,000
Stalingrad	445,476	Stalinsk	169,538
Sverdlovsk	425,544	Tallinn	147,000
Novosibirsk	405,589	Ashkhabad	126,600
Kazan	401,665	Kishinev	110,000
Kuibyshev	390,267	Frunze	93,000
Riga	385,000	Stalinabad	83,000
Saratov	375,860	Petrozavodsk	70,000

Education. In the academic year 1941-42, pupils attending elementary and secondary schools numbered about 36,200,000. There were about 1,200,000 students in technical schools and workers' faculties; about 1,800,000 children in nurseries and kindergartens, exclusive of 5,700,000 children placed in collective farm nurseries and kindergartens during harvest season; and 657,000 students in universities and colleges. The expenditure for education in 1945 was 28.6 billion rubles (20.4 billion rubles in 1944).

Production, etc. In Soviet Union transport and communications are conducted as Federal departments. Banking is centralized in a State Bank under government control. Distribution is socialized, with retail trade in the cities conducted mainly by local administrative bodies and in the villages by consumer cooperatives. Industrial production is carried on largely by State enterprises, operating under the general direction of appropriate commissariats (government departments). A State Planning Commission (Gosplan) plots the objectives for each year and for five-year periods. An

Economic Council acts as a coordinative body. An organization in the Commissariat of State Control checks and supervises results.

State planning is an essential of Soviet economy and it is designed to direct and coordinate the employment of the energies and resources of the country for orderly development. However, the planning system goes beyond the economic field. It includes science, education, public health, and the extensive social services designed to safeguard the welfare and security of the citizenship. Beginning in 1939, the Soviet Government withheld publication of detailed information on industrial production, agriculture, and other phases of economic development. For prewar production figures for industry, mining, and agriculture, see *YEAR BOOK* for 1942, p. 698-99.

Foreign Trade. Foreign commerce is a governmental monopoly exercised by the Commissariat of Foreign Trade which maintains trading agencies abroad. Imports and exports are regulated in accordance with the country's system of planned economy. In 1938, the last year for which trade figures were published, imports totaled 1,422,882,000 rubles and exports 1,331,927,000 rubles, nominally equivalent to \$261,757,000 and \$250,751,000, respectively, in U.S. currency.

Finance. The budget of the U.S.S.R. is a summation of the budget of the Union and the budgets of the 16 constituent republics. For 1945 a budget in the amount of 307 billion rubles was approved. About one-half the revenue was obtained from the earnings of state-owned industry, followed by taxes and contributions by the general public. Expenditure included the following amounts: defense 138 billion rubles, economic development 65 billion rubles, social and cultural services 66 billion rubles, administration 9.5 billion rubles. In 1944 actual revenue totaled 268 billion rubles and actual expenditure 263 billion rubles.

The Soviet Government repudiated the state debt outstanding as of Jan. 28, 1918. On Jan. 1, 1933, the internal debt amounted to 10.088 billion rubles; on Aug. 1, 1940, it totaled 39.8 billion rubles. The nominal exchange rate of the ruble, for foreign trade exchange valuation purposes only, was 5.3 rubles to U.S.\$1 (1 ruble = \$0.1887).

Transportation. Railway mileage increased from 53,700 in 1937 to an estimated 62,000 miles on Jan. 1, 1941 (including lines in Russian-annexed territories). Highways extended 1,682,000 miles in 1940. Some 65,826 miles of inland waterways are navigable. There was a total of 100,000 miles in the civil air network in 1940. The merchant marine on July 1, 1939, comprised 716 vessels of 1,315,766 gross tons.

Government. Under the Constitution of Dec. 5, 1936, supreme political power is vested in the Supreme Soviet of the U.S.S.R., meeting twice a year, and elected for a period of four years by universal direct suffrage and with secret ballot. The Communist Party, however, is the only legal political party and all candidates for elective office must have its approval. The Supreme Soviet consists of two legislative chambers with equal rights—the Council of the Union, and the Council of Nationalities. The Council of the Union has 647 members (one for each 300,000 inhabitants) and the Council of Nationalities 713 members representing the constituent republics (25 from each), autonomous republics (11 from each), autonomous oblasts (5 from each), and national okrugs (1 from each). The two chambers in joint session elect a Presidium consisting of 42 members (including a president, 16 vice presidents (one vice president

for each constituent republic of the Union), a secretary, and 24 others) with wide administrative powers between sessions of the Supreme Soviet, including ratification of treaties and declaration of a state of war. The Presidium supervises the work of the Council of the People's Commissars, selected by the Supreme Soviet, which acts as the executive and administrative organ of the state.

Joseph Stalin became general secretary of the Russian Communist Party in 1922 and after banishing Leon Trotsky in 1924 established a rigid but unofficial personal dictatorship through his control of Communist Party policies. He became a member of the Presidium in 1925 and on May 6, 1941, replaced Vyacheslav Molotov as President of the Council of People's Commissars, or Premier. Molotov became Vice Premier and Foreign Commissar. On July 1, 1941, after the German invasion began, the Presidium of the Supreme Soviet, the Central Committee of the Communist Party, and the Council of People's Commissars announced that all powers had been concentrated in the hands of a Committee for State Defense consisting of Stalin (chairman), Molotov (vice chairman), Marshal Klementy E. Voroshilov, L. P. Beria, Commissar for State Security, and Georgi M. Malenkov, general secretary of the Central Committee of the Communist Party. On July 20 Stalin assumed the post of Defense Commissar and assumed direct control over the Commissariat for State Security. The elections to the Supreme Soviet scheduled for 1941, 1942, 1943, and 1945 were postponed and the powers of the Supreme Soviet were extended by Presidential decree.

Events, 1945. The Face of Victory. To the Soviet Union, as to all the United Nations, 1945 brought peace with victory. For its attainment the Soviet peoples paid a larger price in the blood of their sons and in the devastation of their land than all of the Western Allies combined. Between November, 1942, and May, 1945, the Red Army fought its way forward from the Volga to the Spree, transmuting imminent defeat at Stalingrad into unlimited triumph in Berlin. The fifth and final Soviet offensive of the war was launched in central Poland on January 12. Warsaw was taken on the 17th and Danzig on March 30, while other Red forces crushed the enemy in Budapest (February 13) and Vienna (April 13). On April 25 Berlin was encircled. On the same day the 58th Guards Division of Konev's 1st Ukrainian Army effected a junction at Torgau on the Elbe with the 69th Division of General Hodges' U.S. 1st Army. "The victorious Armies of the Allied Powers," proclaimed Stalin, "have routed the German troops and linked up on the territory of Germany. Our task and our duty is to finish off the enemy. . . . We hail the gallant troops of our Allies."

On May 2, 1945, with the Red Flag flying over the ruins of the Nazi capital, the last Wehrmacht units in Berlin grounded arms. On the 7th Marshal Zhukov, joined by Tedder and Spaatz, signed documents of unconditional surrender with Keitel, Friedeburg and Stumpff. On Moscow's V-E Day (May 9) 30 salvos were fired by a thousand guns. Stalin declared: "The age-long struggle of the Slav peoples for their existence and their independence has ended in victory over the German invaders and the German tyranny. Henceforth the great banner of freedom of nations and peace among nations will fly over Europe. . . . Eternal glory to the heroes who fell in the battle against the enemy and gave their lives for the freedom and happiness of our people!" Soviet hopes for the future found voice in the words of Ilya Ehrenburg:

A new era has begun, an era of plowmen and masons, doctors and architects, of gardeners and schoolteachers, of printers and poets. Washed by the tears of spring, Europe lies wounded. Much labor, persistence, audacity and determination will be required to heal all the wounds, so that the 20th Century—saved from the bloody pit into which the Fascists had cast it—may again stride toward happiness. The boldness, talent, and conscience of our people will help the world rise to its feet.

United Nations. Long before the guns fell silent, Soviet leaders joined with their Western colleagues to plan the foundations of peace. At Yalta Stalin, Churchill and Roosevelt announced a program for occupation and control of the Reich and agreed that the Provisional Government of Poland, which Moscow had recognized on January 5, should be broadened by the inclusion of democratic leaders and should arrange for free elections. The Crimea communiqué of February 11 also called for a liberalization of the Tito regime in Yugoslavia and for concerted efforts by the three major Powers to assist liberated peoples to establish peace, secure relief, form interim democratic regimes, and facilitate free elections. An accord of March 5 on voting procedure in the UNO Security Council, projected at Dumbarton Oaks, was followed by the San Francisco Conference (April 25–June 26), planned at Yalta. In response to a plea from Truman to Stalin, Molotov headed the Soviet delegation. He asserted at the outset:

The Soviet Government attaches great importance to the International Conference in San Francisco. . . . Whatever may depend upon it and its efforts in the common cause of the creation of a postwar organization for the peace and security of nations will readily be done by the Soviet Government. . . . This great cause is resolutely backed by our peace-loving people, by the Soviet Government and the Red Army, and by our great Marshal Stalin.

Soviet Byelorussia and the Ukraine were admitted to the Conference and to the UNO as separate States in accordance with the understandings reached at Yalta. But Molotov was thwarted in his efforts to obtain the exclusion of Argentina and the admission of the new Poland. After prolonged controversy, Moscow yielded to pleas that no State on the Security Council should use its "veto" to prevent discussion of any dispute submitted by any State. The Soviet conception of the UNO was well put by *New Times* (formerly *War and the Working Class*) July 1: "Unanimity among the great powers is the cardinal factor which creates the possibility for making UNO an effective organization of international security. . . . Under what conditions will the actions of the new organization be sufficiently effective? The answer to this question was given by Comrade Stalin, as far back as Nov. 6, 1944, when he said, 'They will be effective if the Great Powers which have borne the brunt of the war against Hitler Germany continue to act in a spirit of unanimity and accord. They will not be effective if this essential condition is violated.'" On Aug. 20 the Presidium of the Supreme Soviet ratified the Charter.

Under an accord signed on June 5 by Zhukov, Eisenhower, Montgomery, and DeTassigny, the U.S.S.R., Britain, the United States, and France jointly assumed supreme authority in Germany. The four Supreme Commanders comprised a Control Council in Berlin. A joint *Kommandatura* was established for the area of Greater Berlin. The rest of the Reich was partitioned into occupation zones. At Potsdam (July 17–August 2) Stalin, Truman, and Atelee agreed on measures for the liquidation of Nazism, the military and economic disarmament of Germany and the division of reparations. The U.S.S.R. was awarded all removals of equipment from its own zone plus 25 percent of removals

from the Western zones, in addition to German assets in Finland, Eastern Austria, Hungary, Rumania, and Bulgaria. It renounced all claims to captured German gold, to German assets in other countries, and to shares of German enterprises in the Western zones. Moscow and Warsaw later agreed that Poland should receive 15 percent of the Soviet share of reparations. *Izvestia* (August 3) hailed the settlement as "a fresh assurance that the Governments and peoples of the three great democratic Powers jointly with the other United Nations will maintain a stable and equitable peace."

War with Japan. By the stipulations of a secret accord reached at Yalta and confirmed at Potsdam, the U.S.S.R. agreed to join its allies in the Far Eastern war three months after the German capitulation. On April 5 Molotov denounced the Soviet-Japanese neutrality pact of April 13, 1941. Moscow rejected various Japanese peace feelers. On August 8 the U.S.S.R. declared war on Japan, as "the only means able to bring peace nearer, to free the people from further sacrifice and suffering, and to give the Japanese people the opportunity of avoiding the danger of destruction suffered by Germany after her refusal to accept unconditional surrender."

In a week's campaign, waged while Eisenhower visited Moscow, three Soviet Army groups under Marshal Alexander Vasilevsky invaded "Manchukuo," aided by the People's Republic of Outer Mongolia. The Japanese capitulation of Aug. 14 in the face of the atomic bomb was followed by Soviet participation in the surrender ceremony aboard the U.S.S. *Missouri* on Sept. 1. Stalin announced victory anew, this time in terms of "settling the accounts" of 1904–05 as well as those of later dates.

New Frontiers. While no formal peace treaties were signed during 1945, the U.S.S.R. secured provisional control over various border districts through the verdict of arms, the terms of various inter-Allied understandings, and the provisions of armistice agreements. Southern Sakhalin and the Kurile Islands passed to the Soviet Union in August under arrangements originally discussed at Yalta. On August 14 seven Sino-Soviet agreements were signed in the Soviet capital by Molotov and Foreign Minister Wang Shih-chieh in the presence of Generalissimo Stalin and Premier T. V. Soong. By their terms a 30-year alliance was concluded between Moscow and Chungking, involving reciprocal non-intervention and respect for sovereignty and territorial integrity, as well as Soviet aid to the Central Government of China whose title to Manchuria and Sinkiang was recognized. China in turn assented to a plebiscite in Outer Mongolia (whose voters in October cast 400,074 ballots for independence and none for reunion with China) and agreed to the establishment of a joint naval base at Port Arthur, with defense in Soviet hands and civil administration in Chinese hands. The accords also provided for a free port at Dairen and joint ownership and management of the South Manchurian and Chinese Eastern Railways, now consolidated into the "Chinese Changchun Railway." In October the district of Tannu Tuva northwest of Mongolia was formally incorporated into the U.S.S.R. as the Tuvanian Autonomous Region of the RSFSR.

Along its western borders the Soviet Union had already secured possession of Bessarabia and Northern Bukovina by the Rumanian armistice of Sept. 12, 1944. Under the Finnish armistice of Sept. 19 the frontier of 1940 was restored, save that the U.S.S.R. abandoned Hanko, annexed Petsamo and

acquired a 50-year lease-hold on the Porkalla Peninsula. At Potsdam Truman and Attlee assented to the transfer of Koenigsberg and northern East Prussia to the U.S.S.R. and agreed to support Soviet claims to these territories in the final settlement. A Polish-Soviet treaty of Aug. 16, 1945, drew a new frontier along the "Curzon Line," with several deviations in Poland's favor. A Soviet-Czechoslovak pact of June 29 transferred Carpatho-Ukraine to the U.S.S.R., thus extending Russian power beyond the Carpathians and bringing all Ukrainians into a single polity for the first time.

Problems of Occupation. Beyond its restored and extended frontiers, the Soviet Union assumed duties of administering large areas taken from enemy forces. In Germany and Austria (see above) these tasks were shared with American, British, and French forces. In Czechoslovakia American units in the western districts and Soviet occupation troops elsewhere were withdrawn in November. Soviet forces likewise evacuated Yugoslav territory and withdrew most of their detachments from the soil of the new Poland. Hungary, Rumania, and Bulgaria, on the other hand, remained under Soviet occupation at the close of the year, with Soviet officials acting as chairmen of the Allied Control Commissions established in these former enemy States. Numerous tales of abuses and depredations by Red Army men appeared in the American and British press during the summer and fall. Apart from their truth or falsity, the Red Army's practice of "living off the country" led to hardship and resentment among the local populations and tended to discredit Communist groups throughout central and southeastern Europe.

At the other extremity of the Muscovite realm Soviet troops took over Korea north of 38° and occupied Manchuria where, at the request of the Chinese Government, they remained beyond the three month limit originally agreed upon. A unified administration of Korea was planned at the Moscow Conference of December as well as Soviet token participation in the occupation of Japan proper and Soviet membership in the Far Eastern Commission to be set up in Washington and in the Four Power Allied Control Council in Tokyo. The new machinery for joint administration of Japan was to be set up during 1946.

New Allies. In the wake of victory the Narkomindel (People's Commissariat of Foreign Affairs) extended the alliance system begun during hostilities and embodied in the 20-year treaties of mutual aid signed with Britain (May 26, 1942), Czechoslovakia (Dec. 12, 1943) and France (Dec. 10, 1944). On April 11, 1945, Tito and Molotov concluded a comparable Yugoslav-Soviet alliance. A similar Polish-Soviet pact was signed in Moscow on April 21 by Stalin and Osobka-Morawski. In the Orient China became a new ally (see above) and Outer Mongolia remained an old one. All of these pacts were limited to mutual defense against any effort at renewed aggression on the part of defeated foes. All were consonant with the UNO Charter which expressly recognized such "regional arrangements" (Arts. 51-52).

Reconstruction. The appalling scope of the task of repairing the wreckage of war was indicated by a report submitted to the Allied Reparations Commission on September 13. Soviet experts estimated that their country had sustained damages totalling 679,000,000 rubles from direct destruction of property, including the wrecking of 1,700 towns, 70,000 villages, 6,000,000 buildings, 84,000 schools, 43,000 libraries, 31,000 factories, 13,000 bridges, 40,000 miles of railway track, etc.

in addition to the loss of 7,000,000 horses, 17,000,000 cattle, 20,000,000 pigs and 27,000,000 sheep and goats. No figures on human casualties were released. But it appeared probable that 5,000,000 soldiers and guerrillas had given their lives in the struggle against the enemy, and that famine, disease, slavery and mass murder in the territories so long occupied by the foe, along with increased death rates and diminished birth rates throughout the Union between 1941 and 1945, had accounted for 20,000,000 civilian lives.

The Demobilization Law passed by the 12th session of the Supreme Soviet at the end of June provided for the mustering out of 13 older-aged classes. A decree of September 26 by the federal Presidium released privates and non-commissioned officers over the age of 32, along with all women in the lower ranks, teachers, specialists, students and other categories. All those demobilized—totalling 4,000,000 by mid-September—were to receive clothing and shoes, rations and transport en route to their homes, living quarters and fuel, loans for home-building in devastated districts, one year's pay for each year's service for enlisted men (with smaller payments to officers) and a guarantee of work within one month of arrival at their places of residence. Jobs for veterans were to be "not inferior to their occupations prior to Army service" and suitable to training and experience. "This article," boasted Kalinin, "is perhaps the only one of its kind in world legislation. Nor is this surprising, for its provision is possible only in a Socialist State."

The restoration of the devastated areas and re-conversion of industry were well advanced by the close of the year. Aircraft factories began producing tableware, bedsteads, and bicycles. The Commissariat of the Tank Industry, still under Col. Gen. V. A. Malishev, became the Commissariat of Transport Equipment, turning out trucks, busses, and rolling stock. A new Commissariat of Industrial Crops Cultivation, established on November 11, was charged with increasing production of cotton, sugar, flax, hemp, tobacco, rubber, etc. Although war losses were partially compensated for by the vast expansion of Soviet heavy industry during hostilities, the problem of restoring and surpassing prewar standards of production and consumption would take years. Yet the enterprise was well launched, with fewer frictions and frustrations than marked the comparable process in the West.

Five Year Plan. On Aug. 19 the Central Committee of the Communist Party and the Council of People's Commissars instructed the State Planning Commission to draw up a new *Pyatiletka* for agricultural and industrial reconstruction and expansion. The goal was complete rehabilitation of the devastated areas by 1950, plus an appreciable increase of production throughout the Union over prewar levels. The objectives of the fourth Five Year Plan contemplated the doubling of the output of electric power by 1950, with hydro-electric stations to supply almost one-third of the total. By the end of 1945 electric power output had attained its prewar level. Coal production was at 85 percent of the prewar figure. The ruined city of Stalingrad was producing 60 percent of its prewar output. Civilian goods were returning to the market, with inflated prices in open stores gradually being reduced toward normal levels. These and other achievements left few Soviet citizens doubting that the new Plan, the details of which were to be announced early in 1946, would attain its purposes, including vast housing developments and a further expansion of light and heavy industry.

The Political Scene. The structure of power within the U.S.S.R. exhibited no major changes on the morrow of victory. By V-E Day the Communist Party had 5,000,000 members, including candidates who comprised a quarter of the total, and the Komsomols c. 15,000,000 members. The majority of those carrying Party cards were new recruits of the war years. The Party held no national Conferences or Congresses during the war, nor was it indicated when Congress XIX would meet. Speculation abroad regarding possible rivalry between old leaders and new members, or between Party and Army, proved to be as baseless as rumors regarding the illness of Stalin, who took a long vacation on the Black Sea in the autumn. The members of the new military and diplomatic elite were elaborately rewarded for their services. Those who died at their posts were honored—i.e. Konstantin Oumansky, killed in a plane crash near Mexico City, Jan. 25, and Gen. Ivan D. Cherniakhovsky, fatally wounded in action Feb. 18. The venerable Mikhail Kalinin was awarded the Order of Lenin on his 70th birthday, Nov. 20.

While the composition of the Political Bureau and most other Party agencies remained unchanged, minor modifications were introduced into the formal governmental structure. In addition to the German Volga Autonomous Republic, abolished in 1941, the Crimean, Kalmyk, and Chechen-Ingush Autonomous Republics and the Karachai Autonomous Region (all in the Caucasus) were deprived of autonomy and transferred to adjacent administrative areas of the RSFSR. The State Committee of Defense (War Cabinet) was abolished in October. In all other essential respects the Soviet system, like the Party hierarchy, emerged from the war intact with no significant innovations announced or contemplated.

Toward New Elections. On Oct. 5 the federal Presidium fixed Feb. 10, 1946, as the date of elections for a new Supreme Soviet of the U.S.S.R. The existing legislature had been elected on Dec. 12, 1937. The election regulations issued on Oct. 11 (see *Information Bulletin* of the Embassy of the U.S.S.R., Washington, Nov. 24) exhibited several departures from the arrangements adopted eight years previously. The voting age remained at 18 but deputies were now required to be 23, although the Constitution of 1936 (Art. 135) set the age of 18 as the lower limit both for electors and the elected. Provisions for voting lists, electoral commissions, nominations and voting procedure conformed to earlier rules.

Multiple candidacies were contemplated. This was also the case in 1937, but in practice all nominees save one withdrew before the balloting, thus leaving the voters no choice, apart from the choice involved in the informal "primaries" whereby many candidates were called but only one was chosen. The rules of 1945 specified that the voter "leaves on each ballot the name of the candidate for whom he is voting and strikes out the names of the others. . . . If none of the candidates receives the absolute majority of votes, the respective area election commission . . . announces the holding of a ballotage of the two candidates who have received the largest number of votes and appoints a day (for the "run-off") not later than two weeks after the first election." As in 1937, candidates were nominated during December and January in the name of "the bloc of Communists and non-Party people." They included all the well-known Party leaders along with prominent non-Party members in many districts, with no rival parties permitted.

The demarcation of the new single-member elec-

tion districts indicated that there would be 656 members of the Soviet of the Union (as compared with 569 elected in 1937) and 631 members of the Soviet of Nationalities (574 in 1937). Since each constituency for the former chamber comprises 300,000 population under Soviet law, the conclusion might be drawn that the U.S.S.R. in 1946 has a population of 196,800,000, despite war losses. But no new census was taken and the inference is scarcely valid. In all probability the districts in the formerly occupied provinces (originally containing 88,000,000 inhabitants) were marked out on the model of 1937, without regard to population losses, while new districts were established in the Volga, Ural, and Siberian areas to which millions of refugees moved during the war.

Religion. Governmental cooperation with the Eastern Church developed further during the year, while polemics between the Kremlin and the Vatican grew more embittered. On Jan. 31 the first General Episcopal Assembly of the Russian Orthodox Church since the Revolution opened in Moscow to choose a successor to Patriarch Sergei, who died in May, 1944. Delegates came from many lands, including the United States whence the Metropolitan Benjamin traveled to the Soviet capital. Alexei, Metropolitan of Novgorod and Leningrad, was crowned Patriarch on Feb. 4.

Throughout the year Soviet journalists repeatedly accused the Vatican of favoring a "soft peace," supporting Polish, Spanish, and Argentine fascists, instigating "politicians in cassocks," etc. These criticisms were repeated by many Orthodox churchmen, including Metropolitan Benjamin. Papal spokesmen replied in kind. The Vatican denied in March that any negotiations with Moscow were under way. Early in July Father Leopold Braun, the only Catholic priest in Moscow and an American citizen, was fined 100 rubles for allegedly striking a doorman. In October Father Braun, who was pastor of the French Church and chaplain to American Catholics in the U.S.S.R., announced his decision to come home, after 12 years of service in the Soviet capital. His successor, Father Antonio Laberge, who assumed his duties at the end of the year, expressed enthusiasm over Russian hospitality. Despite such instances of harmony, Soviet-Vatican relations grew worse instead of better, with Communists accusing Catholics of anti-Soviet conspiracies and pro-Fascist sympathies and Catholics accusing Communists of persecution, godlessness and political use of Orthodoxy to serve purposes of aggrandizement.

Disunited Nations. Autumn saw the rise of new frictions among the Great Powers of the victorious coalition. In form, these controversies centered on procedures of peace-making. In substance, they sprang from divergent views as to the legitimate ends and means of American, British, and Soviet policies in regions outside of their respective frontiers but inevitably subject to their influence. In August, Bevin and Byrnes expressed dissatisfaction with Soviet policy in Hungary, Rumania, and Bulgaria and refused to grant recognition to the "undemocratic" regimes in these States. At Potsdam the new Council of Foreign Ministers was asked to draft peace treaties with these countries as well as with Italy and Finland. When the Council met in London on Sept. 11, Bevin and Byrnes proposed French and Chinese participation in all of the discussions, though this was not technically in conformity with some of the passages of the Potsdam Declaration. Molotov assented, only to discover that Bidault and Wang sided with Byrnes and Bevin on all controversial issues—a circumstance

attributable to the dependence of the French and Chinese Governments on Anglo-American aid for recovering control, respectively, of Indo-China and the northern Chinese provinces. On Sept. 22 Molotov withdrew his assent and held that only the American, British, and Soviet Foreign Ministers should henceforth discuss the Balkan treaties.

The Council broke up in discord on October 3 after Bevin and Byrnes had rejected Molotov's proposal and all efforts to achieve a compromise had failed. Official recriminations and reciprocal accusations of bad faith created a tense atmosphere in which Marshal Zhukov cancelled a proposed visit to the United States. Spokesmen for the Atlantic powers insisted that Balkan "democracy" and the participation of all the United Nations in treaty-making were questions of "principle." Molotov challenged British policy in Greece, supported Yugoslav claims to Trieste, advanced demands for a Soviet trusteeship over Tripolitania, and insisted upon joint control of Japan, refusing meanwhile to approve Soviet participation in the "Far Eastern Advisory Commission."

These controversies troubled those who realized that such conflict, not adjusted, would spell the suicide of civilization in the atomic age. The temporary Anglo-American monopoly of the bomb contributed to friction by fostering insecurity in the U.S.S.R. All Powers relied on traditional (i.e. pre-atomic) conceptions of global strategy in their respective quests for safety. Some Americans and Britishers, fearful of "Communism" or "Soviet imperialism," hoped to checkmate Soviet power by a new *cordon sanitaire*. Some Russians, fearful of "reaction," neo-fascism and "encirclement," hoped to weaken Anglo-American power by a "*cordon sanitaire* in reverse."

Reunited Nations. In this potentially explosive situation, wiser counsels finally prevailed, with results which at the close of the year seemed encouraging for prospects of renewed collaboration among the Super-Powers—without which there could obviously be no security for anyone. Molotov's moderate address on Nov. 6, celebrating the anniversary of the Revolution, contributed to harmony:

The significance of our victory must be seen not only in the light of the defeat of German Fascism but in the light of the military, political, and moral defeat of Fascism throughout Europe. . . . The discovery of atomic energy should not encourage either a propensity to exploit the discovery in the play of forces in international policy or an attitude of complacency as regards the future of the peace-loving nations. . . . The failure of the London Conference sounded a certain warning in this matter, but there were also difficulties in the Anglo-Soviet-American coalition during the war. Nevertheless, though not always immediately, the coalition of the three Powers was able to find a correct solution in accord with the interests of the entire anti-Hitlerite coalition and one that took into account also the need for further consolidating the collaboration of the great democratic States. . . . Only such collaboration can promote success in the work of the new international organization for lasting peace. . . .

Our country has embarked on peace-time construction. . . . The enemy interrupted our peaceful creative endeavor, but we shall make up properly for all lost time and see to it that our country shall flourish. We will have atomic energy and many other things too. . . . Our people are full of faith in their great cause, the cause of the great October Socialist Revolution.

In accordance with the Yalta decision that the Foreign Ministers of the Big Three should meet periodically, Byrnes, Bevin, and Molotov met in Moscow, Dec. 16-26, following transmission of a message from Truman to Stalin by Ambassador Harriman, who visited the Generalissimo at Sochi on Oct. 24. The final communiqué represented concessions on all sides, with Washington and London modifying many of the positions taken in the fall

in the interest of resuming progress in peace-making.

It was agreed that treaties with Italy, Finland, Hungary, Rumania, and Bulgaria should be drafted, finally drawn up, ratified and enforced by the Powers signatory to the respective armistice agreements, on the basis of recommendations of a conference of 21 States to meet not later than May 1, 1946. It was agreed that policy toward Japan should be formulated by an eleven-Power Far Eastern Commission in Washington and administered by a four-Power Allied Council in Tokyo, under the chairmanship of the Allied Supreme Commander; that an American-Soviet Commission in Korea should prepare for independence, following an interim four-Power trusteeship; that the U.S.A. and the U.S.S.R. would withdraw their forces from China at the earliest practicable moment and would practice non-intervention and promote a unified and democratic China; and that the Rumanian and Bulgarian Governments should be broadened, democratized and then recognized by Britain and America. It was finally agreed that Moscow would join London and Washington in recommending to the UNO General Assembly a resolution for a Commission for Control of Atomic Energy, charged with the tasks outlined in the Truman-King-Attlee statement of Nov. 16, composed of the States on the Security Council plus Canada, answerable to the Security Council, and authorized to "inquire into all phases of the problem and make such recommendations from time to time as it finds possible."

Problems of the Borderlands. Continuing controversies between the U.S.S.R. and the Western Powers inevitably centered in the areas where their influence and interests overlapped. These shadow-zones extended in a global semicircle from Central Europe and the Mediterranean to the Sea of Japan. Disputes were most acute in the Middle East. On March 20 Moscow denounced its pact of 1925 with Turkey and initiated negotiations for a new accord. Although Soviet proposals were not made public, they were reported to include changes in the status of the Straits, with possible Soviet bases on the Dardanelles, and retrocession of the Kars and Ardahan districts to the U.S.S.R. Turkish publicists breathed defiance. American proposals for internationalization of strategic waterways produced no new agreement by the end of the year. Soviet pressure on Turkey and alleged British support of Turkish resistance left the prospects obscure and potentially dangerous.

Sharper conflict developed in Iran, where Soviet spokesmen condemned Anglo-American influence on the "feudal-reactionary" Government at Teheran (which had rejected Soviet bids for oil concessions while respecting British and American concessions in the south) at the same time that Western critics accused the U.S.S.R. of "oil diplomacy," intervention and subversive propaganda. When rebels in Iranian Azerbaijan established an autonomous regime in late November and Soviet occupation forces denied passage to Government troops to suppress the rebellion, the United States proposed that America, Britain and the U.S.S.R. all withdraw their armies of occupation by Jan. 1, instead of March 2, 1946, as specified in existing agreements. On Dec. 3 Moscow rejected this proposal, contending that the "rebellion" was a popular movement for autonomy and democracy and that the U.S.S.R. could not foster disorder and bloodshed by permitting additional Iranian troops to enter the northern districts. When Teheran, apparently with British encouragement, submitted

the issue to the UNO in January, 1946, Moscow asked the UNO to investigate the role of British troops in Greece and Indonesia.

U.S.A. and U.S.S.R. With America and Russia emerging from the war as the two giants of world politics, all issues of global diplomacy became, directly or indirectly, issues of American-Soviet relations. Apart from the concords and discords noted above, Moscow was reported in January to have asked a long term credit of \$6,000,000,000 to promote trade and facilitate reconstruction. In July the U.S.S.R. asked UNRRA for aid amounting to \$700,000,000. Agreements were signed in December for relief to Byelorussia and the Ukraine. Negotiations over continued lend-lease aid beyond the close of hostilities were inconclusive, as were discussions regarding credits. Soviet failure to ratify the Bretton Woods Agreements by December 31 were attributed by some observers to a desire to see whether the United States was disposed to match its proposed new loan to Britain (\$4,400,000,000) with a loan to the U.S.S.R.

Soviet expectations of enlarged trade were reflected in September in the leasing by Amtorg of the Morgan estate at Glen Cove, L.I., as a recreation center for Soviet buyers. In mid-September Stalin received a delegation of American Congressmen and recalled the desire of his Government to borrow \$6,000,000,000. To Senator Pepper he expressed hopes of increased American-Soviet understanding and cooperation.

The realization of such hopes continued to be endangered by mutual suspicions, veiled rivalry for power, Soviet secretiveness and ridicule of American "freedom of the press," and widespread demands in the United States for "toughness" toward Russia and an end of "appeasement," coupled with denunciations of Soviet "tyranny" and occasional insistence that "two worlds are doomed to come into conflict" (e.g. Clare Boothe Luce, May 29). Despite many vicissitudes and numerous questions left unanswered, the year's record of American-Soviet diplomacy offered hope of sufficient harmony and unity in peace-making to avoid the disaster of a global competition for hegemony between the two colossi. Whether the Soviet leaders and the American public would continue to practice moderation, self-restraint and "realism" in a degree adequate to build an enduring structure of world collaboration remained to be seen.

See UNITED NATIONS and names of other powers and of all major States of Europe and Asia for further details of Soviet interests and policy.

FREDERICK L. SCHUMAN.

UNITARIANS. A religious denomination, founded in England in the late 18th century, which holds belief in one God in one person as opposed to the Trinity. Headquarters, 25 Beacon Street, Boston, Mass. For statistics, see RELIGIOUS ORGANIZATIONS.

UNITED BRETHREN. A term used for three religious denominations in the United States, all originating in the evangelistic movement of William Otterbein and Martin Boehm about 1800. The largest body is the Church of the United Brethren in Christ with headquarters in Dayton, Ohio. For statistics, see RELIGIOUS ORGANIZATIONS.

UNITED NATIONS INTERIM COMMISSION ON FOOD AND AGRICULTURE. A Commission established in Washington, July 15, 1943, in accordance with Resolution II adopted by the United Nations Conference on Food and Agriculture held in 1943 (see YEAR BOOK for 1943). The Commission is com-

posed of one official representative from each of the member countries. It has an Executive Committee, composed of representatives from 11 countries, and three Working Committees. The Interim Commission has established liaison with war and relief agencies, has initiated factual surveys of certain countries and areas, and is preparing reports on urgent agricultural and nutritional problems. Chairman, L. B. Pearson of Canada.

UNITED NATIONS (UN). Organized during the war to present a solid coalition against the Axis powers, the United Nations in peace assumed the duties of a world union with three major functions: to maintain international peace and security by preventing aggression and settling disputes peacefully; to develop harmonious relations between nations based on respect for equal rights and self determination of peoples; and to achieve international cooperation in economic, social, cultural and humanitarian problems and in promoting respect for human rights and fundamental freedoms.

These objectives, based on the universal hopes of mankind, can be too easily riven by immediate needs and ambitions of the separate nations. The controversies that boiled in the San Francisco Conference indicated the problems facing a world organization even though its power may be strengthened by the potential use of force. The question of world security at San Francisco provoked considerable debate on regional security agreements. Did the erection of a world Security Council invalidate such agreements as the Act of Chapultepec, or the Arab League, or an entente made between the Soviet Union and the Balkan states? The Conference finally agreed that the UN would honor the regional treaties so long as they were consistent with the general aims of the UN. To avoid more dangerous waters, the Charter made no mention of any revisions in existing treaties. Similar issues were raised on the question of "independence or self-government" for trusteeship territories, and on the question of compulsory agreement to the decisions of the International Council. Later debates on atomic energy, Greece, Indochina, the Netherlands East Indies, Manchuria, Palestine and Iran gave wider expression to local interest.

The Conference on International Organization. The ambition of the world for lasting peace lay vested in the United Nations Charter, created at San Francisco on June 26 after 62 days of discussion and debate by delegates of 50 nations representing 80 per cent of the world's population.

Behind the fact of this document sprawled a vast, complicated international background. The San Francisco Conference culminated a succession of meetings by leading powers that began with the Declaration by the United Nations signed by 26 nations at Washington, D.C. on Jan. 1, 1942, and concluded with the Big Three meeting at Berlin on July 17, 1945.

The stage of the Conference was set in the Opera House and the Veterans Building of San Francisco's Civic Center. For two months preceding the meeting special trains and 80 airplanes carried more than 3,500 staff members and equipment to this West Coast city. From this hub the news of the proceedings were radiated to all parts of the world by more than 2,500 press and radio representatives at a rate of more than 150,000 words a day. The United States delegation was ramified by consultants from 42 national organizations. The Library of Congress improvised a special research library for the convenience of all delegations. More than 12,000 telephone calls a day were transmitted

through a switchboard of 60 trunk lines manned by 38 operators, 20 of whom had a knowledge of foreign languages. The delegates used 350 vehicles, supported by trucks to carry equipment, for local transportation. Newsreel cameras recorded the Conference on 160,000 feet of film. Documentation in English and French of the Conference consumed an average of a half million sheets of paper a day.

The concept of the Charter, blueprinted at Dumbarton Oaks, actually refined the Covenant of the League of Nations with one exception—the lesson learned between wars, that for an organization to preserve peace, it must have a command of force. With this as the heart of the plan, the Dumbarton Oaks proposals conceived a Security Council, composed of the most powerful nations who would act jointly as the world warden of peace. The plan further envisaged a General Assembly of all member nations with an equal voice except in issue of peace enforcement, and an Economic and Social Council.

After eight sessions, during which the proposed Charter was considered sentence by sentence in the various committees of the San Francisco Conference, the completed Charter was presented to the United Nations delegates and adopted by acclamation during the ninth session.

The Charter describes the vital organs of the UN in its chapters on the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council, the International Court of Justice and the Secretariat.

The General Assembly constitutes the framework and meeting ground of the UN. Regular annual sessions are prescribed for the Assembly; special sessions can be called when circumstances dictate. During the voting in these sessions a two-thirds majority is required on special issues, while a simple majority decides routine matters. The paramount job of the Assembly evolves in its recommendations on international problems to member nations and the Security Council. It further serves to make studies on international cooperation; aid in the election of members to serve on the Security Council, the Economic and Social Council and the Trusteeship Council; decides the budget; and deals with admission, suspension and expulsion of members.

The Security Council, with its dominating position in the UN, is responsible for the maintenance of international peace and security. The five leading powers—China, France, Great Britain, the Soviet Union and the United States—occupy permanent seats on the Council. The permanent five, however, are supplemented by six non-permanent members from the other United Nations, elected for two-year terms by the General Assembly. By means of elected members to the Security Council, the smaller nations can express their opinions and act as a rein on the permanent members. Although each member of the Security Council has one vote, a distinction is made between decisions on which the permanent members must be in unanimous accord and those on which any seven affirmative votes rule the issue. On matters leading to the possible use of force or situations jeopardizing relations within the Council, a decision is made by unanimous vote of the permanent members; on matters of procedure, elections, meetings, agencies and invitations on a non-voting basis to member nations whose interest are in discussion, approval is given by seven affirmative votes.

An Economic and Social Council was devised in the Charter to advance "social progress and human rights." Consisting of 18 members elected by the

Assembly for three-year terms, this Council strives to promote higher standards of living, solutions to economic problems, educational cooperation, and universal human rights and fundamental freedom.

On the assumption that many areas still exist which are not developed sufficiently to care for themselves, the Charter instituted a guardian agency called the Trusteeship Council composed of member nations administering such territories, other members of the Security Council, and as many other members elected for three-year terms, to insure equally divided membership between those who are and those who are not administering trust territories. Within the Council's scope of authority are those territories held under League of Nations mandates, territories taken from enemy states in World War II, and territories voluntarily placed under the system by those states responsible for their administration. Provision is made for a particular type of trusteeship over strategic areas determined as pivot points of defense against aggression. Responsibility for these areas falls to the Security Council.

To settle international disputes of a legal nature the Charter provided for an International Court of Justice, an institution comparable to the World Court of the League of Nations. The Court consists of 15 judges, no two of whom may be nationals of the same state, elected for terms of nine years by the General Assembly and the Security Council. Under the statute setting up the Court each member nation is invited to recognize as compulsory the Court Decisions in all interpretations of treaty, questions of international law and reparations.

The Secretariat, to serve the above-mentioned organs, consists of a Secretary-General appointed by the Assembly on the recommendations of the Security Council and a staff of special assistants who collate material for conferences, draft reports and accomplish general clerical duties. The Secretary-General is authorized to inform the Security Council of any matters which, in his opinion, threaten international peace.

Preparatory Commission. During the proceedings at San Francisco provision was made for a meeting of a Preparatory Commission composed of a representative from each nation that signed the Charter, with an Executive Committee from Australia, Brazil, Canada, Chile, Czechoslovakia, France, Iran, Mexico, the Netherlands, the Soviet Union, the United Kingdom, the United States and Yugoslavia. The prime object of the Committee's meeting at London in August and November was to construct the working machinery of the UN in planning the Secretariat and in establishing sessions for the General Assembly, the Security Council, the Economic and Social Council, the Trusteeship Council and the International Court.

The initial decision of the Executive Committee divided the first session of the General Assembly into two parts; one organizational, the second to consider substantive problems. It was intended that action at this initial Assembly meeting would make some progress in interim measures in the trusteeship field, elect non-permanent members to the Security Council and elect members to the Economic and Social Council. The Commission further agreed that the permanent UN headquarters should be in the United States, that the functions and assets of the League of Nations should be absorbed by the UN, that the Secretariat should be set up and a Secretary-General selected at the Assembly meeting, that nominations be made to the new International Court of Justice and that press and public be admitted free to UN meetings.

In the terms of the Charter, the creation of a Human Rights Commission was mandatory with the UN's avowed determination that the rights of man shall not suffer such total disregard as has been witnessed in recent years. Under the recommendations of the Executive Committee the work of this Commission would be directed toward the formulation of an international bill of rights; recommendations for an international declaration or convention on such matters as civil liberties, status of women, freedom of information, protection of minorities, prevention of discrimination on grounds of race, sex, language or religion; and any matters within the field of human rights considered likely to impair the general welfare or friendly relations among nations.

United Nations Conference for the Establishment of an Educational, Scientific and Cultural Organization. On the first occasion where education was given an international foundation, forty-four members of the United Nations agreed in London during early November to establish a world-wide educational organization designed to improve cultural standards everywhere. The convention, representing every major nation except the Soviet Union, unanimously approved of the new agency to be known as the United Nations Educational, Scientific and Cultural Organization dedicated to raising universal educational standards and removing illiteracy and misunderstanding.

The constitution of the UNESCO emphasizes the value and need of an international exchange of scholars, teachers and books. With headquarters in Paris, the organization hopes for cooperation between nations on all new developments and findings in the fields of education, scientific research and the study of cultural problems relating to peace.

The Atomic Plan. The birth of disciplined atomic energy made public with the devastation of Hiroshima created a unique problem for the UN. In recognition of the pressing nature of the new weapon, the three joint owners of atomic knowledge, Great Britain, Canada and the United States, formulated an expedient plan in a five-day conference at Washington ending Nov. 15.

It was decided that the "know how" of atomic bomb manufacture would temporarily remain with the three joint originators, but would be shared with others after effective international controls could be devised.

The plan recommended that a special commission be established within the UN to manage the controls, outlaw the bomb as a weapon and insure the use of atomic energy only for peaceful purposes. The commission would have the authority to inspect all countries to protect complying states against violations and evasions of the agreement. In addition to its duties to inspect and safeguard, the commission would sponsor the exchange of scientific information between the various nations and would recommend any measures necessary to restrict atomic energy to peaceful use. The three signators of the plan hoped that this free exchange of knowledge would be adopted by all nations, "thereby creating an atmosphere of reciprocal confidence."

Council of Foreign Ministers. During September and early October the foreign ministers of the Big Five met in London to draw up specific peace settlements for the defeated nations. After 22 days of discussion and argument no final agreement on the important questions of Italy and the ex-Axis satellite nations of eastern Europe broke the deadlock that stalemated the conference. The conference

split between the Soviet Union on one side and China, France, Great Britain and the United States on the other, over the major issues of Danubian treaties and former Italian colonies.

Potsdam Declaration. Another attempted move toward the consolidation of mutual interest between the Big Three was enacted near Berlin on July 17 when President Truman, Marshal Stalin and Prime Minister Churchill, who was replaced in the closing sessions by the new Labor Prime Minister, Clement Attlee, met to discuss, for the most part, defeated Germany. Aside from disposing of the German problems alive in the occupation, the tripartite conference reached an agreement for a Council of Foreign Ministers representing the five principal powers to prepare the peace settlements. In the discussion of memberships in the United Nations, it was decided that the Spanish Government, founded as it was with the aid of Axis powers, would not be permitted membership.

Crimea Conference. The final meeting of the original Big Three, President Roosevelt, Marshal Stalin and Prime Minister Churchill, had occurred at Yalta in the Crimean peninsula on Feb. 4. Most of the discussions centered on deciding the salient problems that would face the United Nations in the immediate aftermath of the war. The initial announcement from the meeting declared the doom of Germany and was followed by a plan setting up a Control Commission for the administering of the German occupation and denazification. The Big Three concluded agreements on aid to liberated Europe, recognition of the new Polish Provisional Government of National Unity, recognition of the Yugoslav Government under Marshal Tito and Dr. Subasic, periodic meetings of the foreign ministers of the Big Three, and a conference of the United Nations at San Francisco on Apr. 25.

The report on the Crimea Conference stated that the mission of the proposed conference at San Francisco would be to prepare the Charter on the basis of the Dumbarton Oaks conversations. On the all important issue of Security Council vote, no accord was reached. China and France were invited, in conjunction with the Big Three, to make invitations to the conference.

The United Nations Relief and Rehabilitation Administration, although an integral part of the UN, has so large a sphere of activity that it is treated in the following separate article.

UNITED NATIONS RELIEF AND REHABILITATION ADMINISTRATION (UNRRA). An international agency established on Nov. 9, 1943, as the first service agency of the United Nations. In 1946 it was composed of 47 member governments, each of which participated in UNRRA's policy-making Council. Six governments—the United States, Great Britain, the Soviet Union, China, France and Canada—were also represented on the Central Committee, empowered to make emergency policy decisions between sessions of the Council. Executive responsibility was vested in the Director General, Herbert H. Lehman, assisted by his staff, composed of over 9,000 persons and of some 30 nationalities.

UNRRA was organized to provide relief and rehabilitation to the people of liberated territories in Europe and the Far East, concentrating primarily on assisting those nations without adequate foreign exchange resources to finance their own relief imports. This help has consisted of relief supplies—food, clothing, fuel, medicines; relief services—health and welfare services, repatriation of displaced persons; and rehabilitation supplies and services—seeds, fertilizers, insecticides, basic farm

tools, repair parts for the rehabilitation of industry, transportation and other public utilities, and raw materials.

To finance these supplies and services, each member country not occupied by the enemy was asked to contribute one percent of its national income for the year ending June 30, 1943. Meanwhile, all countries, invaded and uninvaded alike, were asked to contribute proportionately to UNRRA's administrative budget.

In 1945, UNRRA's basic shift of emphasis was from planning to operations. Prior to undertaking field activities, it had analyzed relief requirements, recruited and trained an international staff, arranged for the procurement of supplies from contributing countries, concluded agreements for assisting the military and the governments of receiving countries, and accepted administrative and operating contributions.

On April 1, 1945, UNRRA took over relief operations from the military in Greece, and in Yugoslavia on April 15. V-E Day paved the way for increasing supplies and shipping to help meet the needs of those liberated countries in Europe which did not possess adequate foreign exchange resources, and were therefore dependent upon UNRRA assistance. V-J Day made possible relief and rehabilitation operations on a global basis.

The acceleration of UNRRA's operation in 1945 was seen in the following cumulative statistics of supplies shipped overseas:

End of first quarter 1945:	87,000 long tons
End of second quarter 1945:	1,101,000 long tons
End of third quarter 1945:	2,126,000 long tons
End of fourth quarter 1945:	4,034,000 long tons

In 1946 UNRRA is providing full-scale assistance to Greece, Albania, Yugoslavia, Italy, Poland, Czechoslovakia, and China. In addition, it is giving aid to the Ukrainian and Byelorussian Soviet Socialist Republics, and providing emergency help to Finland and Hungary. Austria, Formosa, and Korea—all victims of enemy annexation in the past—have also been judged eligible to apply for assistance. Over-all responsibility for the displaced persons operations in Germany and Austria has been carried by the military authorities who have provided the basic supplies and transportation for the millions of displaced persons repatriated to their homelands. During the summer and winter of 1945-46 UNRRA personnel have assisted the military in the care of hundreds of thousands of displaced persons, and administered hundreds of D.P. assembly centers.

At the UNRRA Council Session held in London in August, 1945, a resolution was passed stating that UNRRA expected to terminate operations in Europe by the end of 1946, and in the Far East by the first quarter of 1947. In order to obtain funds to carry on full-scale operations during the period, the Council also adopted a resolution requesting a second contribution from the uninvaded nations. The British Government announced in November that a second British contribution of approximately £75,000,000 would be available. The U.S. Congress, after appropriating \$550,000,000 to complete the first American contribution of \$1,350,000,000, authorized a second contribution of the same size, and on December 18 appropriated the first installment thereof amounting to \$750,000,000. On Dec. 22, 1945, the Canadian Government announced its approval of a second Canadian contribution of \$77,000,000. As of Dec. 31, 1945, a total of \$3,611,942,710 had been paid or pledged to UNRRA—of which \$1,722,669,369

represented the second contributions of the United States, the United Kingdom, Canada, and the Dominican Republic.

HERBERT H. LEHMAN.

UNITED SERVICE ORGANIZATIONS, Inc. (USO). An organization formed Feb. 4, 1941, to provide off-duty recreational and other services to the men in the armed forces, with the following member agencies: The Young Men's Christian Association, The National Catholic Community Service, The Salvation Army, The Young Women's Christian Associations, The National Jewish Welfare Board, and the National Travelers Aid Association (q.v. under SOCIETIES). USO is supported entirely by public subscription. In 1941 and 1942 it obtained \$14,353,666 and \$32,586,501 respectively through its own campaigns. In 1943, 1944, and 1945, with other major war-related agencies, it was a member of the National War Fund (q.v.) which conducted a nationwide campaign. The National War Fund goal in 1945 was \$115,000,000, and USO's share of the total was \$52,096,500.

The groups served are men and women of the armed forces. Members of the Women's Army Corps and women's auxiliaries of the Navy, Coast Guard, and Marines are admitted to USO clubs and other service units on the same basis as men in uniform. Services are also extended, as required, to Army and Navy nurses, merchant seamen and wives of service men. Industrial workers in certain areas were also served. There are USO operations in the Continental United States, in bases elsewhere in the western hemisphere, and in the Philippine Islands. USO-Camp Shows visits American troops in all combat zones, as well as throughout the western hemisphere. More than one billion people have been served by USO since its inception.

USO came into being at the time the nation was preparing its defenses under the threat of war. Originally it was planned to operate 341 clubs in 200 communities. When America entered the war Dec. 7, 1941, USO had 496 clubs and other centers in operation. With the tremendous expansion of our armed forces USO services also had to expand rapidly; USO operations totaled 3,040 in March, 1945, but decreased after the end of the war to 2,261 on Nov. 15, 1945.

It has been necessary to diversify the types of service provided. Greatly increased travel by men in uniform called for special facilities in rail and bus stations. The Troops-in-Transit Service was instituted and by autumn, 1945, was operating 147 lounges at principal transportation centers and providing comfortable rest quarters, reading and writing material, refreshments, and information. Supplementing the lounges, 122 USO-Travelers Aid desks were assisting servicemen and their families with travel problems.

Coastal defenses were greatly strengthened after Pearl Harbor. Life at these outposts is lonely; leaves are infrequent. To reach these men USO organized its Mobile Service Division, which operates 93 units inland for troops on maneuvers. Mobile units give motion picture shows, and bring books, writing paper, games, refreshments, and other supplies.

The USO Overseas Services Department was formed to serve troops stationed in western hemisphere bases outside Continental United States. This department operates 147 clubs and other service units from Alaska and Newfoundland down through the Panama Canal, Bermuda, the Caribbean area, Brazil, and also Hawaii and the Philippine Islands.

USO-Camp Shows, an affiliate of United Service Organizations formed after Pearl Harbor, supplies live-entertainment to American service men and women all over the world, with no admission charge to anyone in the service; over 700 overseas units entertain troops in the European, Pacific, China-Burma-India, and Italian Theaters of War, as well as Alaska and the Aleutian Islands, Labrador, Greenland, Iceland, Panama, Bermuda, the Caribbean, South America, the Philippine Islands and Japan. Within the United States 23 units cover Army camps and Naval stations. Also within the United States, there are 27 units touring Army and Navy hospitals. The live-entertainment consists of leading stars from stage, screen and radio; singers, dancers, and instrumentalists from the concert stage; and, in addition, many lesser known performers who are singers, dancers, instrumentalists, actors, comedians, magicians, puppeteers, ventriloquists, jugglers, acrobats, or novelty specialists; figures in the sport world; also portrait artists who sketch GI patients in hospitals and give the sketches to the patient-models free of charge. More than 150 artists working in the United States devote considerable time to this free service. Overseas there are 26 artists and seven caricaturists. Since August 1, 1944, over 30,000 drawings have been produced.

The clubs render the chief volume of USO services. After Pearl Harbor new clubs opened at an average rate of 52 a month for nearly two years, reaching into 48 States, the District of Columbia, and 16 western hemisphere bases. There are now 1,494 clubs in Continental United States, including 584 operated by local communities in affiliation with USO. Equipped with lounges, writing rooms, showers, snack bars, game rooms, libraries, phonographs, radios, and auditoriums, they provide a haven for servicemen and women on leave from military posts. Most clubs have photographic dark rooms and craft and hobby shops. Programs include dances, moving pictures, classes in languages, crafts, art, and other subjects, social parties, forum and current event groups, sports, and musical events.

USO now maintains more than 400 operations in 84 communities adjacent to military general hospitals, at which disabled service men may learn new skills during convalescence and be entertained. Through group activities, use of program opportunities in the community, and individual services, USO seeks to offset isolation and confinement to hospital, reaction to disability and combat experience, impending discharge or reassignment to duty, and problems of family relationship which emerge from or are precipitated by family visits.

Information and counsel on personal problems constitute an increasingly important part of club services. USO staffs, carrying out the inter-faith policy of USO, offer to those desiring them, religious programs in cooperation with local clergy of the different faiths. Opportunities are also provided for servicemen and women to continue customary church attendance and association with churchmen and church members. Religious counsel, as requested, is also available.

Special programs are held for the wives of service men, such as social gatherings and classes in prenatal and child care, sewing, nutrition, and cooking.

Through the cooperation of local groups; women's organizations, civic, business, and patriotic clubs, and churches; the USO clubs reach into community life. These groups sponsor some programs within the clubs, and others elsewhere, such

as picnics, dances, beach and fishing parties, as frequently as possible. Through the club, local families invite men and women to dinners in their homes. In this way the club enters the community. The work of 1,000,000 volunteers is indispensable at clubs and lounges, not only in assisting professional staffs but also in providing companionship to men and women in service at programs and social events.

USO Scrapbook Service sends interesting and entertaining reading matter to service men and women in camps, hospitals, foreign lands, on ships at sea and wherever there are members of the armed forces. Blank scrapbooks, bought in lots from Scrapbook Service, are filled by responsible organizations of all kinds, turned back to USO for final examination, and then distributed as requested by USO departments, hospitals, and the U. S. Army and Navy.

Of USO's 2,261 operations, 1,200 are operated by USO member agencies and 914 by local communities in affiliation with USO. They are located in 996 cities and towns in 45 States, and the District of Columbia, and in 77 communities in 16 areas elsewhere in the western hemisphere. Attendance at both clubs and lounges is approximately 30,000,000 a month.

USO officers in 1945 were: Dr. Lindsley F. Kimball, President; John D. Rockefeller, Jr., Honorary Chairman; Walter Hoving, Chairman of the Board; Harper Sibley, Vice-Chairman of the Board; C. Frank Kramer, Jr., Secretary; Mrs. Henry A. Ingraham, Randall J. LeBoeuf, Jr., Francis P. Matthews, Comm. Donald McMillan, W. Spencer Robertson and Frank L. Weil, Vice-Presidents; and John F. Hickey, Treasurer. National Headquarters are in the Empire State Building, 350 Fifth Avenue, New York 1, N. Y.

UNITED STATES. War and Peace. The shadow of the Belgian bulge continued its sobering spell over the United States as 1945 opened. Allied armies were attacking the German salient in that sector of the world conflict. On the other side of the globe, MacArthur forces were bombing Luzon preparatory to a promised return to Manila.

In anticipation of fearful, and possibly drawn out, ordeals to come, the United States tightened its belt in January for an arduous journey to victory. In the 365 days that followed the trip proved not so long as had been expected, but much more awesome. The people felt the thrill of a victory over all their enemies sooner than they had any reason to hope, but its very suddenness brought forth in a rush, equally unexpected, all the problems of reconversion and peace. There was gradually a realization that the mere ending of hostilities, even on a note of triumph, did not bring the peace for which they had fought.

The problems of readjustment immediately beset what had been known for four years as the home front. There was the immediate task of binding the nations with bonds more lasting than the desperate ties of war emergency.

The atomic bomb, unleashed at Hiroshima on Aug. 6, accomplished its task, for which \$2,000,000,000 had been spent, in a few days. It ended the war abruptly. But the cones of appalling smoke had scarcely disappeared into the stratosphere over Japan, before Americans, who were chiefly responsible for this "secret weapon," became aware of the challenge of the atomic era.

How to control atomic energy was undoubtedly the most perplexing issue of the year. But there were many other, entirely domestic, trouble spots

that loomed immediately after V-J Day. There was the continuing, if not mounting, pressure of inflation to be met as war dollars were released and war controls eased. Labor, which had been held to the "Little Steel" formula, became restive as living costs edged their way to a point 33 per cent above 1941 levels. Hundreds of thousands of veterans were returned to civilian life to find a housing shortage of such proportions as to force a million families to double up. There was also the job of getting additional millions of GIs home and out of uniform.

These and other pressing matters made the people at the end of the year more aware than ever of their responsibilities in what President Roosevelt once termed this generation's "rendezvous with destiny."

The Home Front. As Allied armies began the hard push to the Rhine and then to Berlin, the cry on the home front was for more war effort—more manpower, more production, more food, more nose-to-the-grindstone. This, despite an all-time high in war production established in 1944, when 45 per cent of the nation's total production was for war materials, and half of an unprecedented \$200,000,000,000 national income had come from producing for war.

Manpower. President Roosevelt, greeting the new 79th Congress on Jan. 6 with a message on the "state of the Union," said the situation called for "total mobilization of all our human resources for prosecution of the war." He urged enactment of a National Service Act to draft manpower for war industry, as well as for military service. He also urged a draft of nurses to assure raising membership in the Army Nurse Corps from 42,000 to a needed 54,000. Voluntary enlistments, he said, had provided only one nurse for every 26 beds in military hospitals, whereas the ratio should be one to 15.

In response, the May-Bailey bill was introduced in the House and Senate to provide for the drafting of all men between 18 and 45. An estimated 4,000,000 4-Fs, rejected for military service, and all men with military deferments who did not stay at their war jobs, were to be drafted into "special service" units, and assigned where they were needed.

The May-Bailey bill, supported not only by President Roosevelt, but also by the military, including Gen. George C. Marshall and Adm. Ernest J. King, passed the House on Feb. 1. But the going was slower in the Senate which on Feb. 22 finally received from its military affairs committee a watered-down no-labor-draft substitute bill. After many weeks of debate a compromise manpower bill passed the House, 167 to 160, but lost in the Senate, 29 to 46. A nurse draft bill was passed by the House on Mar. 7, but the legislation never came to a vote in the Senate.

While neither of the President's requests for compulsory service became law, the prolonged discussion on Capitol Hill had the effect of driving large numbers of an estimated 700,000 needed workers into war industry, which was maintained at near-peak levels until end of the war.

Armed Forces. The personnel of the Armed Forces at the beginning of the year numbered 12,000,000 men and women. Of these, 8,100,000 were in the Army; the rest in the Navy, Marines and Coast Guard. In support of mounting offensives in both Europe and the Pacific, the National Selective Service system steadily tightened its deferment provisions in an effort to meet the demands of the military for manpower. Deferments for an estimated 364,000 farm workers between 18 and 25 were

discontinued on Jan. 3, and six weeks later Selective Service told its draft boards that men up to 34 years old would have to meet stiffer specifications to qualify for occupational deferment. When Congress in early May amended draft legislation to reinstate the deferment of agricultural workers, President Truman rejected it in his first veto, and the House sustained the veto, 177 to 185.

This stiffening of draft regulations continued through V-E Day, after which there were a series of relaxations, beginning with the exemption of fathers.

However, in the last week of April, with victory in Europe less than a month away, Congress extended the Selective Service Act for another year—until May 15, 1946. Principal controversy arose over the use of 18-year-olds, and the extension bill carried a provision, which the military had opposed, prohibiting the armed forces from sending into combat youths of 18 who had not had six months of military training. President Truman signed the bill on May 9 "reluctantly," he explained, because of this restriction.

War Mobilization. James F. Byrnes, director of the Office of War Mobilization and Reconversion, in a report to the President and to Congress on Jan. 1, called for an all-out war program, including legislation for strengthening the power of the War Labor Board to enforce its decisions to keep running war plants involved in labor disputes. Within the next few weeks Mr. Byrnes' office used its executive powers to the fullest to strip the home front of most of its activities not related to advancing the war.

To conserve travel and hotel space, OWMR banned conventions and trade shows. A midnight curfew was clamped on theaters, nightclubs and other places of amusement to save coal, electricity and manpower. Cities were asked to "brownout" their streets, store windows and theater marquees. Horse racing was cancelled for the season. To all of these "orders," issued in the form of requests since OWMR could enforce them only indirectly, through OPA, WMC or WPB controls, the public responded quickly and effectively. These bans for the most part were soon lifted after V-E Day. ODT said the ban on conventions had saved 52,000,000 passenger miles of travel at a time when the railroads were jammed in the deployment, or redeployment of service personnel.

Food. By 1945 the United States had established itself as the "breadbasket of the world," and was producing 30 per cent more food than in the pre-war period of 1935-39. Food was being shipped to Army and Navy personnel numbering more than 10,000,000 in all parts of the world. Through Lend-Lease, vast stores were moving into England, to Russia, whose rich Ukrainian farmlands had been devastated in the Nazi invasion, and to other nations in Europe that even in peacetime were never self-sufficient. While the Government reported that only about eight per cent of the United States' total food output was being shipped to foreign countries, shortages developed in several standard commodities, and OPA found it necessary to tighten the distribution of more and more goods. Canned fruit juices, fats and oils, and many meats, which had been off the ration list altogether in late 1944, were restored before spring of 1945, and, even then, actual shortages developed in meats generally, fats, oils, sugar, condensed and evaporated milk, canned fruits and vegetables.

Although Secretary of Agriculture Anderson on assuming duties of that office July 1, made "more food" a principal objective, many of the shortages

in food persisted throughout the year. By December all blue- and red-point rationing had ended, but grocers' shelves were still far from stocked with normal varieties of goods. Beef and lamb remained scarce, due partly to military purchases, but pork was more plentiful, due partly to a seasonal upswing in supply. Sugar remained scarce, and was the only food still on the ration list.

Other Shortages. Other scarce commodities contributed to making 1945 memorable for the nearly 130,000,000 Americans at home as a year of shortages. For several months from late winter to mid-summer dealers' stocks of cigarettes dropped from sight, and smokers queued up to get a pack of any brand offered. Cotton dresses and wool suits became increasingly hard to buy, and large department stores frequently had as few as a half dozen men's shirts. The apparel shortage was particularly felt in the fall and winter, when despite the war's end, returning servicemen had difficulty outfitting themselves in civilian attire.

Death of the President. After his fourth-term inauguration, which took place Jan. 20, not at the Capitol, but in a quiet, wintry ceremony before the White House, the people of the United States were to see little of the man who had been their President since March 4, 1933. Franklin D. Roosevelt had become almost totally absorbed in the conduct of the war, and in shaping the peace, and he left administration of home affairs more and more to his director of War Mobilization and Reconversion, James F. Byrnes.

A few days after the start of the new term, the President left for the meeting with Prime Minister Churchill and Generalissimo Stalin at Yalta. At the completion of that conference, Mr. Roosevelt and his party, which included his daughter, Mrs. Anna Boettiger, took a leisurely sea trip home, arriving in Washington Feb. 28. The next day the President reported on the historic 14,000-mile trip to a joint session of Congress. He joked about rumors of his ill health, stating that he "was not ill for a second." However, he asked pardon for delivering his address from a sitting posture, which he said "makes it a lot easier for me." Those who listened could also note an absence of the old-time resiliency in his voice, although it spoke with its accustomed firmness and confidence.

Late in March the President left the Capital again, this time for the "little White House" at Warm Springs, Ga. On the afternoon of Apr. 12 he was sitting in front of the fire-place working on papers, while an artist painted his portrait. Suddenly he complained of a severe headache and fainted. He was carried to his bedroom, where he never regained consciousness. He had suffered a cerebral hemorrhage, and died two hours later, at 4:35 P.M. He was 63.

At 5:48 P.M. a White House secretary in Washington passed the news to the world, "The President is dead." Mrs. Roosevelt, who received the word of her husband's sudden death in Washington flew at once to Warm Springs, and accompanied the body back to Washington.

Among the papers left by the late President were the last words he had written, appropriately for a speech he intended to deliver Apr. 14 in Atlanta in celebration of the 202nd anniversary of the birth of Thomas Jefferson. In his unspoken remarks the President emphasized that "Americans were determined to seek an enduring peace and assume their responsibilities in such a peace." "The only limit to our realization of tomorrow," he said, "will be our doubts of today. Let us move forward with strong and active faith."

Change of Administration. On that fateful evening of Apr. 12, Vice President Harry S. Truman, 61, of Missouri, was called quickly from his office in the Capitol, and at 7:09 P.M. before members of the Cabinet was sworn in as 32nd President of the United States. Chief Justice Harlan F. Stone administered the oath.

Before a joint session of Congress Apr. 16, the new President promised his former associates that there would be no "partial victory." He assured the "forward looking people of America" there would be "no relaxation in our efforts to improve the lot of the common people. He made known that the world security conference, scheduled to open within two weeks at San Francisco, would convene as planned by President Roosevelt. He moved to enlist the cooperation of Congress.

Cabinet. The new President asked the entire Cabinet, despite the formal resignations of all, to stay at their posts. All acceded to his request. Changes came later, however, and by year's end only three Roosevelt appointees remained. The shifts came as follows:

Secretary of State: Edward R. Stettinius, Jr., of New York, appointed Dec. 1944, was succeeded by James F. Byrnes of South Carolina, who was confirmed July 2 and took office immediately.

Secretary of the Treasury: Henry Morgenthau, Jr., of New York, who had served since Jan. 1934, was succeeded by Fred M. Vinson of Kentucky, who was confirmed July 17.

Secretary of War: Henry L. Stimson of New York, appointed July 1940, was succeeded on Sept. 25 by his under-secretary, Robert P. Patterson of New York.

Secretary of the Navy: James V. Forrestal of New York, who had served since May 1944, continued in office.

Attorney General: Francis Biddle of Philadelphia, appointed Oct. 1941, was succeeded on July 1 by Tom C. Clark of Texas.

Postmaster General: Frank C. Walker of New York, appointed Sept. 1941, was succeeded on July 1 by Robert E. Hannegan of Missouri.

Secretary of the Interior: Harold L. Ickes of Chicago, appointed in March 1933, continued in office, the only Cabinet officer remaining who had served since the beginning of the Roosevelt Administration.

Secretary of Agriculture: Claude R. Wickard of Indiana, appointed Sept. 1940, was succeeded July 1 by Rep. Clinton P. Anderson of New Mexico.

Secretary of Commerce: Henry A. Wallace of Iowa, appointed in Mar. 1945, continued in office.

Secretary of Labor: Frances Perkins of New York, who had served since Mr. Roosevelt became President in 1933, was succeeded by Lewis Schwellenbach of Washington on June 30.

Other Appointments. President Truman named John W. Snyder to succeed Mr. Vinson as director of OWMR; W. Stuart Symington to succeed Guy M. Gillette as chairman of the Surplus Property Board, and later to head the reorganized Surplus Property Administration; Gen. Omar T. Bradley to succeed Gen. Frank T. Hines as Veterans' Administrator; and Sen. Harold Burton, Republican of Ohio, to succeed Owen J. Roberts, associate justice of the Supreme Court, who retired.

Victory in Europe. Profound as was the shock of President Roosevelt's death, it did not throw out of stride the march of our armed forces to victory. The Germans, who were in Belgium at New Year's Day, were pushed back to the Rhine by Mar. 7, and so fast and furious was the Allied onslaught that the barrier of the river offered slight respite. Short of

gasoline, of airplanes and of men, the once overpowering Luftwaffe and the once invincible Wehrmacht staggered to disintegration and collapse.

The same defeat was taking place in the East, where the Russians broke through the Oder River defenses March 24. The Russians and Americans met on April 25 at the town of Torgau, cutting the Reich in two. Two million Germans in the south of the Reich gave up on May 2. On the same day Berlin fell to the Red Army, and there were reports that Hitler had ended his life rather than participate in that defeat. Four days later a million more Nazis surrendered their arms, and on May 7 emissaries of Admiral Karl Doenitz, who succeeded the Fuehrer to command, signed a surrender to Gen. Eisenhower in a Reims schoolhouse.

America received the news of Germany's surrender more in relief and gratitude than in jubilation. There was full public awareness that a war was yet to be won in the Pacific, and President Truman voiced national sentiment when in a V-E Day proclamation he called for no let-up in the war program until Japan was beaten.

President Truman warned the Japanese people of the suffering in store for them, and pointed out that "unconditional surrender" did not mean their extermination or enslavement. In a war review message on June 1, the President told Congress that forces in the Pacific, which had from the war's start taken second place to the European forces, would be doubled, and that 3,500,000 men in Europe would be transferred to the Far East to support General MacArthur's anticipated invasion of the Japanese mainland. The War Department reported that it had about 8,300,000 men overseas, 6,000,000 of whom would be sent against Japan.

The period between V-E Day and V-J Day will be remembered chiefly for its jammed eastern terminals as soldiers arrived by the thousands for redeployment to the Pacific, and for newspaper accounts of GIs sleeping uncomfortably nights on end in antiquated railway day coaches pressed into service to get them to Pacific ports.

Victory in Japan. With the Philippines retaken in January and February, Iwo Jima and Okinawa captured in campaigns dating Feb. 18 to Mar. 16, and Apr. 1 to June 21, respectively, the next step was invasion of the enemy's homeland.

While attending the "Big Three" conference outside Berlin, President Truman and Prime Minister Attlee issued on July 26 the Potsdam ultimatum calling upon Japan to surrender unconditionally at once, or face "complete destruction."

A Japanese rejection of the ultimatum was answered on Aug. 6, when a single B-29 soaring over Hiroshima, dropped our new "secret weapon" and obliterated 60 per cent of the city. The weapon was the atomic bomb. A second atomic bomb was dropped on Nagasaki with even more devastating result three days later. Meanwhile, on Aug. 8, Russia joined in the war against Japan, and began marching on Manchuria.

On Aug. 10 the Japanese Government sued for peace on condition that Emperor Hirohito be permitted to remain on the throne. The Allies agreed on the understanding that the Emperor would take orders from the Allied Supreme Commander. This the Japanese accepted, and at 7 P.M., Aug. 14, President Truman announced that the war was over.

This time victory was complete, and the Nation, on Presidential decree, took a two-day holiday, Aug. 15 and 16. V-J Day was not proclaimed formally, however, until Sept. 2, after Mr. Truman received the signal that Japanese emissaries had

signed the surrender papers proffered by Gen. MacArthur, appointed Allied Supreme Commander.

War Casualties. An official report on Sept. 20 listed total Army and Navy casualties at 1,071,266. The Army reported 205,569 killed; 571,698 wounded; 24,131 missing; and 120,988 prisoners. The Navy had 54,068 killed; 80,236 wounded; 11,197 missing; and 3,379 prisoners.

The Navy disclosed that during the war it had lost 696 vessels of all types as the result of enemy action and other causes.

Demobilization. Three days after the German surrender, May 10, the War Department announced its point system for releasing personnel. Men in service would receive one point for each month of service since Sept. 16, 1940; one point for each month overseas; five points for the first and each additional award of certain decorations; and 12 points for each child under 18 (limit of three). A total of 85 points was initially required for discharge, but this total was reduced several times after V-J Day. The Navy adopted a similar plan for releasing its personnel.

Despite Army and Navy insistence that they were bringing the men home as fast as possible, in view of the necessity for maintaining occupation forces in Germany and Japan, and of a shipping shortage, public protests against alleged slow progress crescendoed through the fall and winter.

By Dec. 31 the Army estimated it had discharged about 4,000,000 men and women, or about one-half of its V-E Day peak. It planned to reduce its personnel down to about 1,630,000 by June 30, 1946. The Navy ended the year with about 2,000,000 men still in uniform, and 1,000,000 men discharged.

Meanwhile, under Selective Service the Army was inducting 37,000 men a month, and the Navy about 1,000. Replacements were also augmented by approximately 400,000 enlistments, provided for in a new Congressional enactment.

The Atomic Bomb. On the morning of Aug. 7, American newspaper readers picked up their morning editions to read the startling news that a single missile, equal in strength to 20,000 tons of TNT which would have required 2,000 B-29s for transport, had been dropped on Japan a few hours previously. Simultaneous White House and War Department announcements of this new weapon took the public by complete surprise.

The statement of President Truman, who was en route home from his "Big Three" conference at Potsdam, emphasized that one of the scientific landmarks of the century had been passed, and that the "age of atomic energy" was at hand. But the average citizen marvelled more that this great new and terrible thing had been developed in his midst without his knowledge or suspicion.

The bomb was the war's best kept secret. For three years, the Army, directed and spurred by President Roosevelt, worked on a \$2,000,000,000 gamble that a practical means of disintegrating the atom could be developed to release the tremendous force that scientists knew was latent.

Three secret cities—at Oak Ridge, Tenn.; Los Alamos, N. M.; and Richland Village, Wash.—had sprung up. In these communities which totalled some 100,000 residents the principal work of the Army's mysterious "Manhattan Project" was carried on. But in scores of cities throughout the country thousands of workers were contributing strange gadgets and materials. And no one person knew what the thing he was making, or doing, was for.

The "Manhattan Project," directed by Maj. Gen. Leslie R. Groves, became the melting pot for the

discoveries and experiments of many outstanding scientists. To mention just one, Enrico Fermi, an emigre Italian scientist, succeeded in early 1943 in bombarding with neutrons the sensitive element known as Uranium-235, which made it possible to set off a so-called chain reaction in which the splitting of one atom split another and another with unheard of results in force.

Even the experimental blast in the remote New Mexican desert just before dawn on July 17 was not revealed for what it was—the first detonation of an atomic bomb—until the official announcement of Aug. 6. The War Department had successfully deceived the curious who wondered why the sky lighted up “like mid-day” at 5:30 o’clock in the morning, and why houses shook and window panes were broken in cities 100 miles away.

The thrill of this secret absorbed America on Aug. 6 and 7. Then came the reports of the terrible and instantaneous destruction of most of Hiroshima, a city of 318,000 inhabitants, and of the razing of Nagasaki upon which two days later the second and last atomic bomb of the war was dropped.

It was then that Americans, on second thought, felt the full effect of President Truman’s words that “the atomic age” had been ushered in. It was generally feared, if not admitted or realized, that our secret, shared only with Great Britain and Canada, could not be kept. That the “atomic age” was here, not just for us, but for the whole world—for good or evil. Thereafter, this awesome, sobering thought permeated most of our political and diplomatic thinking. One effect was to lower to near insignificance the already impaired prestige of isolationism. It was felt generally that this new weapon, for which we were chiefly responsible, had not only revolutionized warfare, but made it, at long last, intolerable.

In a special message to Congress, President Truman warned that atomic force “in ignorant or evil hands could inflict untold disaster upon the nation and the world.” He urged immediate legislation to create “an atomic energy commission,” and the fixing of a national policy to promote the national welfare, for securing the national defense, for safeguarding world peace, and for acquiring knowledge. A few days later, however, he told a press conference in Tiptonville, Tenn., that the United States would retain the secret of atomic bomb production, with only Great Britain and Canada sharing the knowledge.

Meanwhile, many suggestions were being made. Sixty-four members of the University of Chicago expressed the point of view of most scientists when they urged the President to permit the United States to share the secret of the bomb, stating that “secrecy . . . is a temporary safeguard against frightful danger.”

In Congress, Senator Connally, chairman of the Foreign Relations Committee, suggested on Sept. 8 that the United States furnish atomic bombs to the United Nations Security Council, but retain the secret and tie-up “all available sources” of uranium and other necessary elements. Senator Vandenberg, ranking Republican member of the same committee, offered a resolution calling for a joint committee of six House and six Senate members to conduct a full study on “the development and control of the atomic bomb.” Sen. Brien McMahon of Connecticut introduced a bill providing for federal control over the application of atomic energy for the nation’s benefit. In late October an 11-man Senate investigating committee on atomic energy was authorized under the chairmanship of Sen. McMahon to begin a detailed hearing of

testimony from leaders of the “Manhattan Project” and eminent scientists. A House committee took up an administration-supported bill to nationalize atomic energy.

In November Prime Minister Attlee of Great Britain and Prime Minister Mackenzie King of Canada came to Washington to join President Truman in conferences on the atomic bomb, which the three countries had cooperated in producing. On Nov. 15 the three leaders announced a joint decision to share the atomic bomb secret with other United Nations “just as soon as effective enforceable safeguards against its use for destructive purposes can be devised. They recommended creation of a commission with the United Nations Organization to study the questions of (1) elimination of atomic weapons from “national armaments”; and (2) “inspection and other means to protect complying states against the hazards of violations and evasions.”

Secretary of State Byrnes took this proposal to a December meeting of the “Big Three” foreign ministers in Moscow in an effort to secure Russian cooperation in plans to control atomic energy internationally. Under terms of an agreement reached there, a commission of the UNO Security Council would seek means of outlawing atomic armaments. The commission, it was stated, would be composed of representatives of the 11 nations holding Council seats, and would work toward international exchange of scientific information for peaceful ends; control of atomic energy to insure its use for peaceful purposes; elimination of atomic and other weapons adaptable to mass destruction, and safeguards against violations and evasions of the control regulations.

Reconversion and Postwar Planning. America’s industrial growth during the war had been phenomenal. In a record-breaking five-year expansion, the country had more than doubled its industrial output, to produce \$188,000,000,000 worth of weapons of war. The aircraft industry, in comparative infancy when the war started, built \$44,442,000,000 worth of planes. A total of \$40,644,000,000 in shipping had been constructed.

Chairman Krug in the WPB’s final report urged that industrial mobilization after the war “be kept alive and current.” But as soon as the war ended the Government faced abruptly the task of making it possible for industry to so maintain itself. Production must be shifted from wartime to peacetime goods. The Army and Navy were cancelling millions of dollars worth of war contracts daily. This left millions of workers facing unemployment, and at least temporary displacement unless the reconversion was accomplished quickly and in orderly fashion.

To start the reconversion ball rolling, the administration lived up largely to its wartime promise to lift emergency controls as soon as possible. Even before V-J Day, WPB began lifting its priority hold on hundreds of materials, and this process was speeded after the Japanese surrender until the WPB went out of existence Nov. 3. It was succeeded by the Civilian Production Administration, which under John D. Small, was committed to the task of “expanding the production of materials still in short supply.”

The country’s 140,000,000 population (a November estimate of the Census Bureau), or that part of it in civilian status, enjoyed the first concrete evidence of returning peacetime when the Office of Price Administration on Aug. 15—day after Japan surrendered—lifted gasoline and fuel oil rationing, and took a number of canned goods off the ration

list. Red point rationing of meats and butter was ended Nov. 23, as steaks, chops and roasts began appearing more plentifully in the butcher shops. Shoe rationing ended in October, and a housewife's only need for a ration book at the end of the year was to buy sugar, the first food to go on rationing in Mar. 1942. Rationing of automobiles and tires was likewise ended.

But while the end of rationing was welcomed, there were fears in some administration quarters that lifting of these controls on distribution would aggravate the pressures on inflation. Between 1939 and 1944 national income rose from \$88,600,000,000 annually to \$198,700,000,000, placing more money than ever in the hands of 64,000,000 wage and salary earners. And there was still very little in civilian goods for these war dollars to buy!

Price Administrator Chester Bowles, the life of whose agency had been extended by Congress in the spring until June 30, 1946, declared that OPA planned to put ceiling prices on civilian goods made in the reconversion period, assuring industry "good profits when production starts rolling," while protecting the consumer against inflation. He also advocated continued ceilings on rents, and the application of price ceilings to houses, new and old, placed on sale. In this he was supported by the White House.

War Agencies Abolished. By the end of the year these once powerful war agencies had gone out of existence: the War Production Board, the Office of War Information, the Office of Censorship, the War Labor Board, and the Office of Civilian Defense.

The Administration Program. The Government did not propose to leave reconversion to a policy of easing wartime controls and of *laissez-faire*. Just three weeks after Japan's surrender ended the war, President Truman, on Sept. 6, sent Congress a long message outlining his proposals to effect a reconversion to the "greatest peacetime industrial activity we have ever seen." While he supplemented the message with other requests later, the 21 points he listed at that time form the basis of the Administration's postwar program. In summary the points were:

1. Unemployment compensation—supplementation of state benefits to provide 26 weeks' protection at \$25 a week maximum.

2. Fair Labor Standards Act—"substantial" increase over the present 40 cents an hour minimum wage to eliminate living substandards.

3. Wartime controls—caution on removal by Congress.

4. Executive agencies reorganization—authorization to the President to reorganize the Executive Branch of the Government.

5. Full employment—early action on the bill to provide machinery for a continuous full employment policy.

6. Fair Employment Practices Commission—putting it on a permanent basis.

7. Labor disputes and wage stabilization—labor-management cooperation in peace as in war to keep disputes "at a minimum" and adjustments in wage rates to eliminate inequities.

8. U. S. Employment Service extension—continuation until at least June 30, 1947, before returning it to the States.

9. Agriculture—transfer of \$500,000,000 of Lend-Lease funds to the Commodity Credit Corporation for price support; crop insurance program; scientific research; development of farm export markets.

10. Selective Service—inducements for volun-

tary enlistments and induction from the 18-25 age group for a maximum of two years' service.

11. Housing—aid to private enterprise in building 10,000,000 to 15,000,000 houses in the next 10 years; slum clearance; low-rent housing; speeding rural housing.

12. Research—a single agency for Federal scientific research and promotion of private research.

13. Transition tax revision—limited tax reductions for 1946 and later modernization and cuts.

14. Surplus property disposal—abolishing the present three-man board, and setting up a Surplus Property Administration under a single head.

15. Small business—protection and encouragement.

16. Veterans—liberalized hospital and medical care, vocational training and education, loan guarantees and life insurance; social security coverage for the period of service.

17. Public works and national resources—regional development of the nation's river valleys; construction of Federal buildings, roads and airports; grants to States and municipalities for public works and hospitals.

18. Lend-Lease and postwar reconstruction—liberal settlements to permit "a sound world-wide economy"; continued economic assistance abroad; appropriation of \$550,000,000 and \$1,350,000,000 for the United Nations Relief and Rehabilitation Administration.

19. Congressional salaries—increase to \$20,000 for House and Senate members; repeal of House expense allowance; adequate retirement system for members of Congress; adequate wage scale for executive and judicial branches.

20. Sale of ships—disposal of our large surplus tonnage to expedite resumption of our normal merchant marine operations.

21. Stockpiling of strategic materials—acquisition and retention of materials in which our country is naturally deficient, but which are necessary to national defense.

The President's success in getting this program enacted into law may be noted below in the discussion of Congress.

Labor. President Truman's mention of labor-management cooperation in his reconversion proposals was prompted by an awareness of labor unrest growing out of wartime restrictions on wage increase, and a realization that continued work stoppages holding up production could wreck the entire reconversion program.

Evidence of labor unrest, and labor-management conflict had been plain since early spring. Labor, fettered by the "little steel" formula which held wages pretty much to a 15 per cent cost-of-living rise over 1941 levels, complained that the cost of living had actually far outstripped the working man's increases in take-home pay. Anticipating that labor would suffer even more when the war's end brought on sudden, drastic production cut-backs, leaders of organized labor began in May to voice demands intended to "cushion" the shock.

A dispute in the coal mines dramatized the development. Strikes in April and May resulted in concessions which brought the miners increases of from \$1.25 a day in the soft coal fields, to \$1.37½ in the hard coal mines.

The situation was almost certain to explode when the tie of war emergency was severed, ending for all practical purposes the "no-strike" pledges, and the control of the "little steel" formula. Government estimates showed the rise in the cost of living since 1941 to be about 33 per cent. This figure was close to the 30 per cent pay increases which

various large unions began asking for, but the demand was based primarily on a reduction in the work week, from 48 and 52 hours during wartime, to a normal 40 hours. This involved elimination of most overtime pay, and reduced workers' earnings by near a third.

The country's industries aligned themselves in opposition, declaring that they could not grant substantial pay increases, such as those asked, without raising prices. And OPA stood in the way of price rises.

Anticipating the storm, and also the termination of the War Labor Board, which during the war had provided machinery for breaking deadlocks in disputes, President Truman sought substitute machinery, preferably outside the Government to settle differences without resort to strikes or lockouts. He called a labor-management conference of 16 leaders each from industry and from labor, and opening it in Washington on Nov. 5 called upon the conferees to formulate a "broad and permanent foundation for industrial peace and progress." He stressed the necessity for collective bargaining, and as a last resort for some impartial machinery for reaching decisions.

The conference hit a snag at the start when Philip Murray of the CIO sought to include a discussion of wage increases on the agenda. While he was backed by Secretary of Commerce Wallace, who with Labor Secretary Schwelienbach represented the Government, vigorous opposition rose not only from the industry side of the table, but also from William Green of the American Federation of Labor.

After three weeks, the conference broke up in a disappointing failure. While it produced a resolution calling for future discussions, it was able to agree on no collective bargaining machinery, as the President had hoped.

Meanwhile, a dispute between the United Oil Workers, CIO, and 11 oil companies producing and refining oil, involving 250,000 workers and a demand for a 30 per cent wage increase, failed of settlement in negotiation and President Truman on Oct. 4 directed the Navy to seize the plants to avert a stoppage of production.

Even as the labor-management conference was in progress, the most serious and widespread strike in labor history hit the automobile industry just as its first postwar cars began rolling off the assembly line. A total of 180,000 members of the United Automobile Workers walked out at 80 plants of the General Motors Corporation in 20 States on Nov. 21, and at the end of the year, six weeks later, little progress had been made at collective bargaining, not to mention settlement.

The GM case was watched closely, both because it was the union's first move on the automobile industry, with Ford and Chrysler scheduled for consideration next, and because the issues involved and the way they were met might lead to an entirely new approach to labor-management relations.

The UAW, speaking chiefly through Walter Reuther, its vice president in charge of the GM division, presented a demand for a 30 per cent pay rise and insisted that in granting the increase the company agree not to increase car prices. The company, showing willingness to bargain the first point (although it denied wages could be increased without a lifting of OPA price ceilings on cars), refused to discuss its ability to pay higher wages. This, it argued, was in the realm of management, not of labor.

As this case developed, and after the labor-man-

agement conference failed to produce a solution for just such disputes, President Truman urged Congress in December for legislation authorizing him to set up fact-finding committees to function during a 30-day "cooling-off" period in determining and reporting to him on the merits of the sides in conflict. Lacking such legislation, he immediately named fact-finding committees, under his war powers, in the oil and General Motors cases. The method was blocked, temporarily at least, by the refusal of General Motors officials to furnish a fact-finding committee headed by Lloyd K. Garrison with data regarding its ability to meet union demands.

President Truman on the last day of the year named a third fact-finding committee to intervene in a dispute between the United Steel Workers, CIO, and the steel industry, involving a demand for a \$2-a-day pay increase. Collective bargaining had bogged down on the industry's insistence that it could not pay higher wages to some 700,000 employees without obtaining from OPA a higher ceiling for its product. Meanwhile, the union had voted a strike for Jan. 14, unless agreements were reached.

As the year closed a dozen major strikes, involving more than 1,000,000 workers, were in progress or were scheduled.

Foreign Relations. The year which saw the United States emerge as one of the two greatest world powers, also saw it move toward assuming its full responsibility in that role as a force for peace. The record is one of initiative in seeking a foundation for practical international cooperation, as a substitute for political and economic rivalry. The record also represents a complete reversal of our thinking and action after World War I, when we retreated to isolationism. If the lessons of a second world war, predicted by Woodrow Wilson, prepared us for this new approach, the development of the atomic bomb fixed our course.

Foreign Policy. President Truman made his Administration's clearest statement of foreign policy when after reviewing the fleet in New York on Navy Day, Oct. 27, he said "we seek to use our military strength solely to preserve the peace." He declared that we sought no territorial expansion; we wanted self-government returned to all people who had been deprived of it by force; we believed all peoples prepared for self-government should be permitted to choose their own form; we would try to help defeated nations to establish peaceful democratic governments in a world in which nazism, fascism and military aggression cannot exist. He concluded a list of 12 foreign policy objectives with a statement of our conviction "That the preservation of peace between nations requires a united nations organization composed of all the peace-loving nations of the world who are willing jointly to use force if necessary to insure peace."

Yalta. President Roosevelt had met Prime Minister Churchill and Generalissimo Stalin on Feb. 4 at Yalta in the Crimea. This first meeting of the "Big Three" since Teheran in Dec., 1943, was to be their last. The Conference set up the three-power occupation of Germany following her collapse. It expressed determination of the "Big Three" to disarm and disband German armed forces, and bring Nazi war criminals to justice. The Polish boundary was defined and a commission named to work out a "broadened base" for that country's democratic government. It was also agreed that a conference of the United Nations should be called on April 25 at San Francisco to prepare the Charter for a world security organization, such as was informally proposed at Dumbarton Oaks in 1944.

United Nations. Even before his return to Washington, President Roosevelt had appointed the United States delegation to San Francisco. It included Edward R. Stettinius, Jr., Secretary of State, chairman; Cordell Hull, former Secretary of State, senior adviser; Sen. Tom Connally, chairman of the Foreign Relations Committee; Sen. Arthur Vandenberg, ranking Republican member of that committee; Rep. Sol Bloom, chairman of the House Foreign Affairs Committee; Rep. Charles A. Eaton, ranking Republican member of that committee; Commander Harold Stassen, former Republican governor of Minnesota; and Dean Virginia Gildersleeve, of Barnard College, N. Y.

One of President Truman's first acts, after announcing that the meeting would go forward as the late President had planned it, was to request Generalissimo Stalin to bolster the Soviet delegation with the presence of Foreign Commissar V. M. Molotov, who had planned not to attend. The request was granted, and Mr. Molotov visited the new President in Washington before proceeding to San Francisco.

The Conference opened April 25 with 46 nations represented. In brief message delivered by telephone from Washington, Mr. Truman appealed for achievement of a "just and lasting peace." The conference spent eight weeks working out a satisfactory balance between the "Big Five"—the United States, Britain, Russia, China and France—and the smaller nations, led by Australia.

The result was a United Nations Organization with a Security Council of major powers and a rotating number of smaller ones to take charge of police responsibilities, and an Assembly of delegates from all participating nations to function something as did the old League of Nations.

Fifty nations signed the charter on June 26. President Truman, attending the final session, hailed the accomplishment, but warned that it constituted "only a first step to a lasting peace."

Sen. Connally, reporting to the Senate two days later, urged speedy ratification, and ratification was voted 89 to 2 on July 28, before a midsummer recess. The only set speech in opposition was made by Sen. Burton K. Wheeler of Montana, who, nevertheless, voted for the charter. Only Sen. William Langer, North Dakota Republican, and Sen. Henrik Shipstead, Republican of Minnesota, voted "No." But Sen. Hiram Johnson, Republican of California, who voted against the League of Nations, said he would have voted against the Charter had he not been confined to a hospital bed.

Upon his return from San Francisco, Secretary Stettinius resigned from the State Department, and in accepting the resignation, President Truman immediately appointed Mr. Stettinius U. S. delegate to the proposed UNO Security Council.

On Oct. 24, when receipt of the Soviet instrument of ratification brought the total of adhering nations to 29, Secretary of State Byrnes signed the protocol formally attesting that the charter of the UNO had "become the law of the world."

After Congress in December passed the UNO participation bill (the Senate, 65 to 7; and the House, 344 to 15), Mr. Truman named these delegates to the Assembly, the first session of which was to meet in London Jan. 10, 1946: Mr. Byrnes, who was to act temporarily as head; Senators Connally and Vandenberg; and Mrs. Eleanor Roosevelt, widow of the late President.

Bretton Woods. The Administration introduced in both Houses of Congress bills authorizing the President to join by executive agreement with other nations in the Bretton Woods economic program

looking toward stabilization of world currencies and expansion of world trade. The proposals contemplated an international bank, capitalized at \$9,000,000,000, the U. S. share of which would be \$3,175,000,000; and, secondly, a monetary fund with a revolving fund of \$8,800,000,000 to be used for loans to countries for stabilization purposes.

Opposition, spearheaded at first by banking interests, focused on the fund, said to provide no control over borrowers, and might lead to loose expenditures for political purposes. When the Senate Banking and Currency Committee reported the bill favorably, a Republican minority, headed by Sen. Robert A. Taft of Ohio, denounced the international bank as "an extension to the world of the theories so vigorously advanced by Henry Wallace at home," and called the fund "merely a waste of money." This minority asked for postponement.

However, the majorities of both houses adhered to the Administration view that Bretton Woods held the best promise for world economic peace, and that failure of the American Government to take part in it would mean its collapse. Congressional action was completed July 20. The House had voted 345 to 18, and the Senate, 61 to 16. The President signed the bill en route to the Potsdam Conference.

By Dec. 27 a sufficient number of the 43 other signers at Bretton Woods had also accepted to bring it into being, and at a State Department ceremony representatives of 28 nations signed documents confirming their Governments' ratification. Before the year ended the total had reached 34.

Lend-lease. By Mar. 31 this country had in four years delivered goods and services worth \$38,900,000,000 to our Allies, and had received nearly \$5,000,000,000 in reverse Lend-Lease. Both must continue, Mr. Truman told Congress in a report, as a military necessity. Congress voted an extension, but stipulated that Lend-Lease operations be restricted to "defense goods . . . promoting the defense of the United States."

Accordingly, when the war ended in August, President Truman called an abrupt halt to Lend-Lease, notifying those Allied governments interested to take over, through purchase, some \$2,000,000,000 in goods already contracted for, and, through negotiation, another \$1,500,000,000 of supplies in stockpiles all over the world. This sudden termination drew a protest from Great Britain, and the Administration answered that this matter was "up to Congress."

President Truman told Congress on Aug. 30 that to collect the \$42,000,000,000 which we had sent our Allies in goods and services, might sow "the seeds of a world conflagration," and he indicated U. S. policy in the remark that war sacrifices "cannot be evaluated in monetary terms."

Potsdam. The first result of the "Big Three" conference outside Berlin was the declaration against Japan in which President Truman and the new British Prime Minister, Clement R. Attlee, called upon the Japanese to surrender at once. It had been agreed, but not announced, that Russia would later join in war upon Japan.

The main Potsdam agreement came a week later, when on Aug. 2, Messrs. Truman, Attlee and Stalin announced that (1) a council of the foreign ministers of their countries would continue preparatory work for peace settlements; (2) they had agreed to carry out the Yalta Declaration on Germany with militarism and Nazism wiped out; (3) they planned early trial of war criminals; and (4) the three countries would get reparations from Germany out of their respective zones of occupation.

Pan-America. Secretary of State Stettinius led a United States delegation at an Inter-American Conference on Problems of War and Peace Feb. 22 at Mexico City. Out of the meeting came the Act of Chapultepec, an agreement guaranteeing mutual aid of the American nations against aggressors who during the war attacked the territorial integrity or political independence of any of the nations. It provided for a treaty to be drafted extending the guarantees after the war.

Much discussion centered around absence of Argentina, the only Western Hemisphere nation not to have declared war on the Axis, and the conference decided that Argentina must adhere to Chapultepec, declare war, and sign the declaration of the United Nations before being returned to the family of American nations.

The course of relations between the United States and Argentina remained rough, but, after Argentina declared war on Germany and Japan (Mar. 27), we took the lead at San Francisco to bring Argentina into UNO.

In view of what the United States regarded as undemocratic developments in Argentine politics, however, Under Secretary of State Dean Acheson on Oct. 23 denounced the South American Government, and asked for postponement of a Pan-American conference that was to convene October 20 in Rio de Janeiro to negotiate a military alliance of the Americas. The meeting did not take place.

China. The abrupt resignation Nov. 27 of Maj. Gen. Patrick J. Hurley as ambassador to China after charging State Department subordinates had sabotaged U. S. policy in regard to support of the Nationalist government there, had the effect of drawing emphatic statements from the Administration on that policy. Mr. Truman issued a statement as Gen. George C. Marshall, named as Gen. Hurley's successor, left for his new post. The United States, said the President, sought cessation of hostilities between the armies of Chiang Kai-shek and the Chinese Communists, and secondly, a national conference of major political elements to bring about "the unification of China." Both the President and Secretary Byrnes, in earlier statements, left no doubt that the United States was supporting the Chiang Kai-shek regime.

The Senate Foreign Relations Committee heard Gen. Hurley's charges, including an attack on Under Secretary Acheson for alleged support of Chinese communists in their efforts to get American lend-lease arms, but the hearing was concluded without recommendation.

Foreign Ministers. The first meeting in London of the foreign ministers, following Potsdam, ended in collapse on Oct. 3. Secretary Byrnes and Foreign Minister Bevin of Great Britain rejected a compromise offered by Foreign Commissar Molotov of the U.S.S.R. that would have excluded China from signing the Italian peace pact, and China and France from pacts affecting the Balkans and Finland.

A second conference in Moscow three months later met with greater success. It was agreed that a commission of the Security Council in UNO would seek means to outlaw atomic armaments, and to work toward an international exchange of information on the development of atomic energy.

Another important agreement gave Russia a voice in the administration of affairs in occupied Japan. Under the terms, Gen. MacArthur, Supreme Allied Commander, was to act under the policy direction of the Far Eastern Commission, of which Russia was a member, and, on Russian insistence, each member was to have the power of veto.

British Loan. Immediately after the war ended, Great Britain, partly because of the abrupt ending of American Lend-Lease, applied for a recovery loan, and negotiations between the Earl of Halifax, British ambassador, and Lord Keynes, British economist, and the State Department continued through three months. On Dec. 5, President Truman and Prime Minister Attlee announced the signing of a loan of \$4,400,000,000. It was to be payable at 2 per cent interest in 50 annual instalments. Interest was to be waived during years the British found it did not have the dollars to pay with. The loan awaited Senate approval at end of the year.

Congress. The 79th Congress assembled Jan. 3 with a strengthened Democratic majority in the House as a result of the 1944 national election. The political lineup in the Senate was 57 Democrats (same as in the previous Congress), 38 Republicans and one Progressive. In the House, where the Democrats had gained 28 seats, there were 243 Democrats, 190 Republicans, one Progressive and one American-Laborite.

Vice President Harry S. Truman succeeded Henry A. Wallace as president of the Senate. When Mr. Truman became President of the United States on Apr. 12, Sen. Kenneth McKellar of Tennessee, the president pro tempore, became acting president of the Senate. Sen. Alben W. Barkley of Kentucky was reelected majority leader, and Sen. Wallace H. White of Maine, was minority leader. Party whips were Sen. Lister Hill of Alabama for the Democrats, and Sen. Kenneth S. Wherry of Nebraska for the Republicans.

Rep. Sam Rayburn of Texas was reelected Speaker. Rep. John W. McCormack of Massachusetts was reelected majority leader, and Rep. Joseph L. Martin of Massachusetts, minority leader. Rep. Robert Ramspeck of Georgia remained majority whip, and Rep. Leslie Arends of Illinois was minority whip.

The record of Congress was one of willingness to accept a far-reaching program of world cooperation, but to balk Administration proposals for legislation to meet rising postwar problems at home. This resulted from the existence of near unity on President Roosevelt's foreign policy, and the continuance under President Truman of a serious split, not only between Democrats and Republicans, but also between factions of the Democratic members of both houses, that had baffled Mr. Roosevelt in recent years on domestic issues. While President Roosevelt in his fourth-term election had carried substantial Democratic majorities into both Houses, Administration support continued to be weakened by frequent coalition of Southern Democrats and Republicans.

The first manifestation of this coalition was a surprise attack on the Administration on the first day of the session. The House unexpectedly voted, 207 to 186, to make permanent the special Committee on Un-American Activities, previously headed by ex-Rep. Martin Dies of Texas, and opposed by the Administration for six years. Seventy Democrats, 63 from Southern States, joined 137 Republicans for the measure introduced by Rep. John Rankin of Mississippi.

The next major instance of Democratic fence climbing arose over President Roosevelt's appointment of former Vice President Wallace to succeed Jesse Jones, Secretary of Commerce and director of the Federal Loan Agency. In order to make room in his new Administration for Mr. Wallace, who despite being dropped from the 1944 Democratic ticket, worked vigorously for its election, Mr. Roosevelt on Jan. 20, Inauguration Day, asked

Mr. Jones to step aside. The President explained in a letter that because of his loyalty "Henry Wallace deserves almost any service which he believes he can most satisfactorily perform," and that Wallace had asked for the Commerce post.

During the campaign, Mr. Wallace had been the outstanding spokesman for the Roosevelt New Deal policies, and had worked closely with the Political Action Committee of the Congress of Industrial Organizations. Opposition to confirming his Cabinet appointment, which carried with it the vast loan powers of the Reconstruction Finance Corporation, rose instantly and violently in the conservative elements of both parties. This opposition caused the appointment to be rejected, 5 to 14, by the Senate Commerce Committee Jan. 26.

Meanwhile, Sen. Walter F. George of Georgia introduced a bill divorcing the Government's lending agencies from the Commerce Department, and not until both Houses had passed that legislation and the President had signed it on Feb. 28, did the Senate conclude six weeks of bitter debate by confirming Mr. Wallace, 56 to 32.

The Southern Democratic-Republican coalition also rejected the Roosevelt appointment of Aubrey Williams, former head of the National Youth Administration, as Rural Electrification Administrator, 52 to 36, on Mar. 24. Claude R. Wickard, retiring Secretary of Agriculture, was subsequently appointed and confirmed as RE chief.

Finances. President Roosevelt in his budget message Jan. 4 recommended an \$83,000,000,000 budget for 1945-46, a substantial drop from the previous year. But with war activities still in full swing—although little in war plants remained to be built—he recommended that the statutory limit of the public debt be increased from \$260,000,000,000 to \$300,000,000,000. He estimated that the debt would reach \$292,300,000,000 by June 30, 1946. Congress approved the increase April 3, but beginning with V-E Day, war spending diminished and on Dec. 31, the public debt had climbed only to \$258,700,000,000.

War hostilities ended six weeks after the opening of the present fiscal year, but war activities—demobilization, occupation of former enemy territory, mustering-out pay, and other items—continued to account for three-fourths of federal expenditures, about \$50,000,000,000 out of a total outlay for the year ending June 30, 1946 of \$66,000,000,000. Revenues were estimated at \$36,000,000,000, about 55 per cent of expenditures.

Proposals for tax reduction, to encourage private enterprise during reconversion, were heard in Congress immediately after the defeat of Germany. But President Truman on May 15 said there could be no decrease in levies until after Japan were defeated. However, a tax adjustment act to make \$5,500,000,000 in refunds and tax credits available to business in the next two years was approved July 31.

After V-J Day President Truman recommended in his Sept. 6 message to Congress a "transitional tax bill," and Secretary of the Treasury Vinson proposed a \$5,000,000,000 reduction program for 1946. Congress in the large incorporated these suggestions in its new tax measure, but, as signed by Mr. Truman Nov. 8, the bill ordered repeals and reductions of taxes estimated at \$5,920,000,000.

The bill went through Congress in less than a month, passing the House, 343 to 10, on Oct. 11, and the Senate by a voice vote Oct. 24. Most of the controversy centered around amounts of relief to be accorded business and whether, and how many,

individual taxpayers should be exempted from income taxes. The act repealed the controversial excess profits tax on corporations, and reduced the regular corporation income tax from two to four per cent, depending on the size of income. The total tax relief for business was estimated at \$3,300,000,000. It relieved 12,000,000 persons of payments altogether by making the exemption for the three per cent "normal" tax identical with exemptions for surtax purposes. It repealed the \$5 automobile use tax, effective July 1, 1946, and froze Social Security taxes at the present one per cent each on employers and employees.

Other Legislation. Many of the measures taken up by Congress have already been discussed under "The Home Front" and "Foreign Relations," but major action completed during the first session, outside taxation and finance, is summarized here to show the record.

The Senate ratified the United Nations charter on July 28, and Congress approved an act authorizing participation in UNO by a U.S. delegation on Dec. 18.

Participation in the Bretton Woods monetary proposals was approved in a bill signed by President Truman on Aug. 4.

The Selective Service Act was extended to May 15, 1946 in a bill approved by Mr. Truman May 9.

A renewed price control act, extending the life of OPA to June 30, 1946, was signed by the President on June 30.

The Trade Agreements Act was extended until 1948, with authority included for additional tariff cuts in a bill approved July 5.

Current appropriations of \$3,100,000,000 for the shipbuilding program of the U. S. Maritime Commission, and an additional \$1,165,000,000 of contract authorizations were cancelled in a bill approved by Mr. Truman May 29. Nearly completed legislation at the end of the year provided for the sale of some 5,000 government-owned merchant vessels in the next two years.

A rescission bill, cutting \$51,800,000,000 from funds appropriated for war was approved by Congress in December, and met Presidential veto because it contained a rider forcing the Administration to return the U. S. Employment Service back to the States within 100 days. Mr. Truman stated, however, that he approved the economy features of the bill, and would secure the savings through use of his executive war powers.

Congress appropriated \$550,000,000 to complete payment on the U. S. share for UNRRA on Dec. 5, and on Dec. 17 completed action on a second contribution of \$1,350,000,000 for UNRRA's use in 1946.

The Special War Powers Act was extended in December for six months (President Truman had asked for a year's extension) through June 30, 1946.

A bill providing for government reorganization, requested by Mr. Truman, and for closer control of government corporations was approved Dec. 13.

A bill providing new inducements for Army and Navy enlistments was approved Oct. 6.

An estimated \$8,000,000,000 worth of loan and educational provisions were contained in a bill liberalizing the GI Bill of Rights. It was approved Nov. 8.

A bill authorizing \$160,000,000 to transfer 100,000 temporary dwelling units from war production centers to communities needing them for returning veterans and their families was quickly approved by Congress just before its December adjournment.

President Truman, who had been a member of the Senate from 1935 to 1945, pursued a policy of

cooperation between the White House and Congress. This "good will" produced results for him through the spring and summer, but it began to lag after V-J Day, when Mr. Truman pressed for action on the domestic proposals outlined in his Sept. 6 message. These proposals in the main were intended to put into effect the "Economic Bill of Rights" enunciated before Congress by President Roosevelt first in 1944 and again in 1945.

The foundation of the Truman program was a Full Employment bill, providing for government public works to take up any slack in private employment. The bill passed the Senate, with many compromising amendments in September, but in December the House substituted an Employment-Production measure, so different from the Senate bill, that there was grave doubt of compromise that would be acceptable to the President.

Legislation to provide emergency unemployment compensation for displaced war workers was passed by the Senate, but shelved in the House Ways and Means Committee.

President Truman in a special message Dec. 6 asked Congress for authority to impose a 30-day "cooling off" period in labor disputes while a fact-finding board worked for settlement. Despite his request for action "before the Christmas holidays" because of existing and threatened strikes in key industries, consideration of the legislation was postponed until 1946.

Other reconversion-postwar measures for which the President had asked, but upon which Congress had not acted as the year ended, included legislation to increase minimum wage rates from 40 cents an hour to 65 cents; to establish price ceilings for housing; to liberalize the Social Security Act; to make permanent the Fair Employment Practices Commission; to adopt a program of general housing and health, including compulsory health insurance; to control atomic energy; to provide for universal military training; to unify the armed services; and to establish a new plan of Presidential succession.

Merging Armed Forces. A Presidential request for universal training—training about 700,000 youth a year at a cost estimated at \$1,750,000,000—and the problem of appropriating funds for the postwar Army and Navy were sidetracked temporarily by Congress while it considered proposals from the War Department for merging the nation's land, sea and air forces.

Before the Senate Military Affairs Committee, conducting hearings on the Army's plan to unite the Army, Navy and Air Corps under a new department of the armed services, Gen. Dwight D. Eisenhower, later appointed Army Chief of Staff, said on Nov. 16 that consolidation was necessary to provide a well-rounded program of defense. "It is not feasible to arrive at the size of composition of each arm without simultaneously considering the others," he said. "There is absolute need for economy in administration if we are, as a Nation, to afford an adequate security establishment."

This plan was vigorously attacked by leading Navy officials, including Secretary Forrester, who testified that the Navy's record in the war just completed demonstrated its efficiency and strength as a separate arm. They urged the merger be delayed, at least, while postwar military policy crystallized.

President Truman in a special message to Congress Dec. 19 urged action immediately to reorganize the armed services along the lines recommended by the War Department. He urged creation of a new Department of National Defense under a civilian secretary with Cabinet rank.

Pearl Harbor Investigation. Army and Navy boards had investigated the Pearl Harbor disaster of Dec. 7, 1941, but conflicts in their reports, released Aug. 29, prompted Congress to order a full public investigation by a joint committee of both Houses. Sen. Alben W. Barkley offered the resolution, which was unanimously adopted in both Houses, and he was later chosen chairman of the 10-member committee—three Democrats and two Republicans from each House.

The investigation opened Nov. 15, and voluminous testimony taken from ranking military officials, including General George C. Marshall, as well as minor figures directly involved in the attack, reviewed all previously known information connected with the story, and revealed some that was new. It was placed on the record for the first time that the United States had broken the highest Japanese code previously to Pearl Harbor, and continued to use it effectively through most of the war. Letters from Gen. Marshall to Gov. Thomas E. Dewey in the summer of 1944 requesting the latter not to reveal information he may have acquired about breaking the code during his campaign for the Presidency were also made public.

Political bickering between Democratic and Republican members of the Committee at times took the spotlight from the investigation itself. In the middle of the investigation committee counsel, headed by William Mitchell, resigned because of the prolonged proceedings. The committee was to have completed its work in December, but when less than half the scheduled witnesses had been heard at the holiday recess, both Houses voted an extension of time to February 15.

JAY WALZ.

UNIVERSITIES AND COLLEGES. With Japan's defeat and the relaxation of the war-effort manpower grip on all portions of the population, a national back-to-school movement began stretching the capacities of colleges and universities. The U.S. Office of Education estimated that civilian enrollments in higher educational institutions for October of the 1945 academic year represented a 25 per cent jump over the opening enrollment for the 1943-44 academic year. The peak year of enrollments was 1939-40, when 1,380,000 students were registered. In the fall of 1943 the number of civilian students in higher educational institutions was approximately 738,000, but by the fall of 1945 the number was 926,000. The fall enrollments of military personnel in the war year of 1943 and in 1945 were large, and the combined figures for military and civilian students slightly exceeded 1,000,000 both in 1943 and in 1945. Increases in fall enrollments of civilians since 1943, therefore, approximately equaled the losses during the same period.

The number of persons reported on resident instructional staffs (part-time and full-time) has not changed markedly. From 111,000 in 1939 there were an increase to 114,000 in 1941 and a drop to 106,000 in 1945.

Total educational and general expenditures of higher educational institutions increased steadily from \$522,000,000 in 1939 to an estimated \$697,000,000 for the school year 1944-45. The total amount budgeted for the year 1945-46 is estimated to be \$737,000,000.

These estimates are based upon returns from a sample of 235 higher educational institutions made in October, 1945. The 1945 statistics, matched with figures from the Biennial Survey reports for 1941 and 1943 from the same institutions, have been summarized in tables 1 and 2.

Fall Civilian Enrollments. Estimates for men and women for the 3 years, 1941, 1943, and 1945 appear in table 3 and include full-time and part-time students up to October 15, 1945.

Enrollment Trends. Changes in the 3 periods shown in table 3 for the various types of institutions are indicated in table 4. From this table it is clear that the smallest relative decrease, 1941-43, in fall civilian enrollments was in Negro institutions. Teachers colleges show the greatest relative re-

sumption of activity, 1943-45, but they occupy the lowest position for the entire period. Negro institutions were the only group showing an increase for the entire period, 1941-45.

First-Year Civilian Students. Approximately one-third of college students are in college for the first time. Statistics on such students indicate the rate of accession from secondary school to college. Table 5, which supplements table 3 by showing these figures reveals noticeable differences in the numbers of fall civilian students entering college for the first time during the three-year period reported and a marked superiority in the number of women over men for 1943 and 1945. In 1945, however, approximately 34 per cent of men students were those enrolled in college for the first time, whereas women students in the same category were 30 per cent of all women students enrolled.

Differences between Enrollment of Men and Women. Table 6 shows a decrease of 525,000 in fall enrollments, 1941-43. Most of this decrease, 491,000, was in the enrollment of men students, the number of women students decreasing by 34,000, chiefly among those who had previously attended college. During the period 1943-1945 the greatest numerical increase in enrollment was among women students, almost all of whom had been in college before. On the other hand the greatest percentage increase was in men, and this was especially so in the case of those entering college for the first time. The net result of the war period 1941-45 has been a decrease of 27 per cent, and in the fall of 1945 the registration of men students was still 53 per cent below that of the fall of 1941. In sharp contrast was the enrollment of women, which was 14 per cent greater than that of 1941, most of this increase occurring among those who had previously attended college.

Veterans in Colleges and Universities. Information from the Veterans Administration indicates that there was a decided increase during the fall of 1945

TABLE 1—ESTIMATED ENROLLMENT, STAFF, AND EXPENDITURES IN HIGHER EDUCATIONAL INSTITUTIONS, 1939-45

School Year	Fall Enrollment Civilian	Fall Enrollment Military	Number on Resident Instructional Staff (Part-time and Full-time)	Total Educational and General Expenditures
1939-40	1,360,000		111,000	\$522,000,000
1941-42	1,263,000		114,000	581,000,000

OLD GLORY RISES OVER IWO JIMA

Propelled upwards by six men of three Services, and recorded memorably by the plucky and lucky A.P. photographer, Joe Rosenthal. Pulitzer Prize Award, May, 1945. (Press Assoc., Inc.)

ONE COMPELLING CAUSE

FOR THIS EFFECT

Above: Vice Adm. Mark A. Mitscher looks at the enemy. Below: Excited Filipinos race over this Luzon beach to welcome the first liberating Coast Guardsman, January 9.

JAPAN SURRENDERS BENEATH THE MISSOURI'S BIG GUNS

Foreign Minister Mamoru Shigemitsu, accompanied by General Yoshijiro Umezaki, of the Japanese Imperial Staff, leads his delegation to the formal ceremony, September 3, 1945. (Official U. S. Navy)

GERMANY SURRENDERS UNCONDITIONALLY

In SHAEF's War Room, Reims, France, July 5, 1945, Col. Gen. Gustav Jodl, (center, back to camera) then Chief of Staff, signs the momentous formal document. On his left sits Gen. Admiral van Friedeburg, on right Maj. William Oxenius. Across table, left to right, Allied officers: Gen. Sir F. E. Morgan, Dep. Chief of Staff; Gen. Francois Savez, representing French Chief of Staff; Adm. Harold M. Burroughs, C-i-C Allied Naval Exp. Force; Lt. Gen. B. B. Smith, Chief of Staff to Gen. Eisenhower; Gen. of Artillery Ivan Susloparoff, Russia; Gen. Carl A. Spaatz, CG, USSTAF; Air Marshal J. M. Rabb; Maj. Gen. H. R. Bull; and Sen. Lt. Col. Ivan Zankovits. Interpreter. (U. S. Signal Corps)

* Increase of less than 500 and less than one percent.

in the number of veterans in education or in training status under the provisions of Public Law 346. As of Sept. 30, 1945, there were 22,301 veterans in institutions of higher education under provisions of the Servicemen's Readjustment Act; as of Oct. 31, 1945, the number had increased to 39,439; as of Nov. 30, to 58,582; and as of Dec. 31, to 76,802. In 47 privately owned universities and colleges according to a survey described in *School and Society*, Dec. 29, 1945, veterans constituted 16.1 per cent of the full-time enrollment of 149,389, and in 54 publicly owned universities and colleges (state and municipal) their number was 13.2 per cent of the full-time enrollment of 219,570. In 47 technological schools or institutes, with a full-time enrollment of 57,574, the percentage of veterans was 18, and in 307 independent colleges of arts and science, with a full-time enrollment of 145,946 the percentage was 8.3. According to a Veterans Administration report released in Jan., 1945, "41 per cent of more than 100,000 veterans studying under the Servicemen's Readjustment Act of 1944 are enrolled in 38 of the larger and better-known schools. In prewar years these 38 schools had approximately 25 per cent of the total school enrollment." It is estimated, however, that by the end of 1946 a total of 800,000 servicemen will have enrolled as full-time or part-time students.

Enrollment in Modern Foreign Languages. According to a survey of 672 junior colleges, colleges, and universities, reported in *Crofts Modern Language News*, a total enrollment gain of 17.3 per cent over the comparable figure for 1944 took place in the fields of French, German, and Spanish. Registration

for courses in French was 65,214, an increase of 24.2 per cent over the figure for the preceding year; for courses in German, 44,997, an increase of 20.7 per cent; and for courses in Spanish, 98,475, an increase of 12.8 per cent.

URANIUM. The utilization of the phenomenon of nuclear fission of uranium as the cornerstone of development of the atomic bomb brought worldwide attention in 1945 to this element, which heretofore had been little known. Estimates of composition of the earth's crust show it to be present in considerable quantity (about four parts per million) and far more abundant than such common metals as zinc, lead, tin, silver or gold. It occurs in amounts detectable by the spectrograph and Geiger-Müller counter in most granite and sedimentary rocks.

Although the sources from which it is known to be recoverable by commercial methods are not as numerous as its general abundance would indicate, uranium minerals have been commercially mined in the United States, Canada, Belgian Congo, Czechoslovakia, Portugal, Australia and Sweden. Mining engineers believe that commercial production also is feasible in Russia, Bulgaria, Germany, Madagascar, England, Brazil, and India. Uranium is always found with radium although in much larger quantity, and both uranium and radium are often found with vanadium ores.

Probably the world's richest deposit is that of the Union Minière du Haut-Katanga, at Katanga, Belgian Congo, which commenced production in 1921. Concentrates were shipped to Olen, Belgium, for

refining before the outbreak of the war, after which the entire production went to the United States. This firm and a leading Canadian producer formed a world cartel, which was dissolved in 1941, to divide the radium market between them. The Canadian producer, Eldorado Mining & Refining, Ltd., mined a deposit in the Great Bear Lake region of Northern Canada which in 1938 was claimed to comprise reserves of 60,000 tons of ore containing 1 percent U_3O_8 . Production since has proved these reserves to be vastly larger. Refining is done at Port Hope, Ont.

Prior to 1930 considerable production of uranium salts originated from uraninite-bearing veins at Joachimstal, Czechoslovakia, but more recently this production has been far overshadowed by that of Belgian Congo and Canada. In the United States, uranium has been commercially produced in association with vanadium in carnotite ores of western Colorado, eastern Utah, and to a lesser extent northeastern Arizona. During peacetime, uranium salts, selling at about \$1.50 per lb., were used in coloring glass and pottery brown, yellow and yellow-green; as a mordant in dyeing and in photography.

In the atomic bomb project emphasis was on securing metal of sufficient purity at reduced cost. Methods were developed of securing a pure black uranium oxide which was put through an ether extraction process for further reduction in impurity content, with a brown dioxide as the final product. This oxide is now used as a starting point for all metal production. Improved refining methods reduced the cost of metal from \$1,000 per lb. when experiments started, to \$22 per lb. at the end of 1942. No further cost figures have been revealed, nor have the details of the metal-making methods which were eventually utilized.

CHARLES T. POST.

URUGUAY. A South American republic. Area: 72,172 square miles. Population: 2,185,626 (1941). Capital: Montevideo.

Uruguay is mostly a land of hills and rolling plains, with coastal lowlands on the south and east. Annual temperatures range from about 50 degrees to about 72 degrees.

Government. Under the Constitution of 1934, Uruguay is a centralized republic of 19 departments. The Congress is bi-cameral, with a Senate of 30 members and a Chamber of Deputies of 99. Members are elected every 4 years. The Congress meets annually from Mar. 15 to Dec. 15, except in election years. The President is elected for a 4-year term and may be reelected after a lapse of 4 years. A Cabinet of 9 members aids the President. President Juan José Amézcaga assumed office on Mar. 1, 1943.

The People. Ninety per cent of the population of Uruguay consists of persons of European descent; most of the rest are mestizos. Densities of population range from 12.7 per square mile in the Department of Artigas to 108.6 in the Department of Canelones. Greatest density is in the southern littoral; elsewhere the population is evenly but thinly distributed. The largest cities are: Montevideo, 695,000; Paysandú, 50,000; and Salto, 48,000.

The official language is Spanish. Roman Catholicism is the predominant religion.

In 1938 it was estimated that 65 percent of the total population was literate. In 1941 there were a total of 220,833 students in 1,768 primary schools; 98 intermediate schools had a total enrollment of about 27,000 students. In 1937 the National University had 2,670 students. The Uruguayan Gov-

ernment in 1944 authorized expenditure of 10,000,000 pesos for city and rural school construction throughout the republic.

National Economy. Uruguay's economy is pastoral and agricultural. Stock raising is the most important industry. Meat and meat products, wool, hides and bristles are major exports of the country. Other pastoral exports include dairy products, casein, and cheese. Cattle slaughtered in 1944 totaled 636,318 head. Production of tanned cattle hides and sheepskins totaled 1,062,052 pieces during 1944. Agriculture is the second industry in importance. Wheat, corn, and oats are the leading domestic crops, and linseed is raised for export.

In addition to meat packing and processing (freezing, canning and dehydrating), Uruguay manufactures a wide variety of goods. Among the most important are: cotton and woolen textiles, electrical machinery, batteries, transformers, refrigerators, automobile tires and tubes, furniture, enamelware, glass, and glassware, wines, and pharmaceuticals.

Foreign Trade. Uruguay's exports in 1944 reached a total value of \$97,559,000. Wool was the chief export commodity, and accounted for 41 percent of the total value of all exports; meat and meat products ranked second amounting to 30.5 percent of total value; hides and bristles 11.4 percent. The United States was the leading purchasing country, and took 47.7 percent of the total exports in 1944; Great Britain came second; purchasing 32 percent of the total; Brazil took 3.5 percent, and Argentina 2.8 percent. Venezuela, Mexico, Peru, and Ecuador together bought about 1.6 percent of the total. The leading Uruguayan exports in 1944, according to value, were: wool, \$40,919,000; meat and meat products, \$29,721,000; hides and bristles, \$11,133,000; agricultural products, \$5,972,000; yarn, thread, textiles and their manufactures \$5,056,000; mineral products, \$2,220,000; miscellaneous manufactures, \$1,866,000.

Uruguay's imports in 1944 were valued at \$72,446,000, approximately 13.5 percent higher than imports in 1943. Raw materials accounted for 30.7 percent of total imports; fuels and lubricants 20.3 percent, and foodstuffs, 13.5 percent. The United States furnished 26 percent of Uruguayan imports in 1944; Brazil 22.2 percent, and Argentina 12.8 percent. Venezuela, Ecuador, Peru, Paraguay, Chile, Mexico, Cuba and Colombia together supplied an aggregate of 19.7 percent. The leading import commodities for 1944 listed according to value were: raw materials, \$22,199,000; fuels and lubricants, \$14,721,000; foodstuffs \$9,781,000; general merchandise \$7,612,000; construction materials \$7,061,000; general machinery and parts, \$1,741,000; hardware, \$1,463,000; drugs and chemicals \$1,160,000.

Imports for 1945 were \$114,800,000 of which the United States provided \$29,100,000; Brazil \$19,300,000; Argentina \$11,800,000; and Great Britain \$4,500,000.

Events. The year opened with rumors of a revolutionary plot in Uruguay. President Juan José Amézcaga ordered an investigation, and as a result, fifteen persons, including two German nationals, were arrested in Montevideo on Jan. 5. Nine of the fifteen were released the next day, and the Interior Minister announced that no plot against the Uruguayan Government had been revealed. But it was said that the detained arrestees were members of an international Nazi spy ring, with contacts in Argentina. Ten more persons accused of pro-Axis activities were arrested on Apr. 4; the courts ordered the release of five of them.

A declaration of war against Germany and Japan, opposed by the rightist opposition *Herrerista* Party was approved by Congress on Feb. 21. The Chamber of Deputies passed the measure by a vote of 72 to 19, while the Senate vote was 21 to 7.

On Apr. 24, in response to a Soviet request that the Montevideo Government prevent local papers from characterizing the U.S.S.R. as a "totalitarian" state, the Minister of the Interior said that his Government could not censor the press, but that it would "facilitate and support" any legal action which the Soviet Legation might bring against any specific paper.

As an indirect result of this incident, 96 persons were injured, including Interior Minister Juan José Carbaja Victorica and police head Juan Gómez Folle, and 74 were arrested in riots on May 2. "Apparently Communist" groups celebrating the fall of Berlin had attempted to force the daily *El Día's* building to fly the Soviet flag. The clash occurred when mounted police attempted to drive off the demonstrators. Communist deputies demanded the resignations of Carbajal and Gómez, while *El Día* proclaimed the next day that "We did not fly the Communist flag, because we are not Communists. We celebrate the triumph of liberty and not a Soviet victory." The Government abandoned its plans to call a national holiday on May 3.

Another repercussion to the incident was the resignation on May 9 of Acting Foreign Minister Eduardo Albanell McColl. He charged that the Interior Minister had exceeded his jurisdiction by releasing the Uruguayan reply to the Soviet demand for censorship before the Foreign Ministry could act on the matter. The President refused to accept his resignation. On May 16, Amézaga cleared police head Gómez Folle, declaring that "all reports agree that the firm and serene attitude of the Chief of Police and his subordinates prevented the riots from degenerating into tragedy." And on May 24 the Senate voted unanimous endorsement of the Interior Minister's conduct. Carbajal told the Senators that he did not hold the Soviet Legation or Government responsible for the May disturbances. "Local Communist fanaticism" was responsible, he said, adding that "he would be a foolish politician who believed that the understanding among international Communist leaders has ended."

Communist attacks on Carbajal continued, and were extended in June to include Foreign Minister José Serrato, who was alleged to have called the Soviet Union an enemy of democracy during the San Francisco UNO conference.

Late in June President Amézaga faced his first serious political crisis when followers of former President Alfredo Baldomir decided to withdraw their support of the administration because they objected to its financial policies, and Baldomirista ministers resigned.

On Aug. 16, the Chamber of Deputies cleared President Amézaga of charges that he had used his public office to benefit a private firm with which he is connected.

The entire Cabinet resigned on Sept. 26 to give the President a free hand in reorganizing his administration. The crisis was only settled finally on Oct. 11, when a new Cabinet, with a broader party representation, was completed.

The President's life was believed momentarily endangered on Nov. 23 when Germinal Guida, a 24-year-old student, accosted him on the street and assailed him verbally "in the name of the fatherland." Guida was quickly seized. The police reported that he was deranged and had no political

affiliations. But it was found that he carried a revolver in his pocket.

Late in November the State Department of the United States released a note from the new Uruguayan Foreign Minister, Alberto Rodríguez Larreta, proposing that the American republics agree to intervene collectively whenever the Government of one of them denies essential rights or liberties to its people or fail to honor its international commitments. "Non-intervention cannot be converted into a right to invoke one principle in order to be able to violate all other principles with impunity," the document declared. Although Argentina was not mentioned by name, the proposal was clearly aimed against Uruguay's strong River Plate neighbor, with which relations had long been strained.

The United States and a handful of other American governments gave prompt approval to the new "Larreta Doctrine," but most of them were unwilling to abandon the traditional doctrine of non-intervention, and nothing had been done about the Uruguayan proposal by the end of the year. At home, Administration Senators, by a vote of 16 to 15, blocked the opposition *Herrerista* Party's attempt to brand the Larreta proposal as "inconvenient."

HARRY B. MURKLAND.

VATICAN CITY. A sovereign state, officially called the State of Vatican City, established within the city of Rome as the seat of the Papacy (June 10, 1929) in accordance with the Italo-Vatican (Lateran) Treaty of Feb. 11, 1929 (see 1929 Year Book, p. 417). Ruler: The Supreme Pontiff, Pius XII (Eugenio Pacelli), born in 1876; elected Pope (262nd), as successor of Pius XI, Mar. 2, 1939; crowned Mar. 12, 1939.

The area of Vatican City is 108.7 acres, including St. Peter's Square, and in addition 13 ecclesiastical buildings outside of its limits enjoy extraterritorial rights. It has its own coinage, import duties, railway station, and its postal, telegraph, and radio facilities. The estimated population in 1941 was 970. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers. He delegates administrative authority within Vatican City to a Governor, who is assisted by a counselor general and other officials. The legal system is based on canon law and ecclesiastical rules. The chief advisers of the Pope are the members of the College of Cardinals, who are appointed by him for life and elect his successor upon his death. From Vatican City the 12 committees forming the Curia Romana carry on the central administration of the Roman Catholic Church. Relations between the Church and the governments of the world are conducted by the Papal Secretary of State. The Holy See in 1945 maintained diplomatic relations with 44 governments and had unofficial relations by means of Apostolic Delegates with a number of others.

VENEZUELA. A South American republic. Area: 352,143 square miles. Population: 4,005,000 (1942). Capital: Caracas.

Venezuela has two highland regions: the Guiana highlands occupying nearly one-half of the country in the southeast; and the Venezuelan highlands extending northeastward from the Colombian border to the Caribbean. The Maracaibo lowlands form the extreme northwestern section of the country, and between the highland regions lie the extensive plains of the Orinoco. The northwestern lowlands have hot, humid climate, while the central coastal

region is hot and dry. The hot climate of the Orinoco plains and somewhat cooler climate of the Guiana highlands are subject to extremes of wet and dry seasons.

Government. Venezuela's Constitution of 1936 provides for a federal union of 20 states and 2 territories. The Congress is bi-cameral, with a Senate of 40 members and a Chamber of Deputies of 98. Ninety day sessions of Congress are held annually beginning on Apr. 19. The President is elected by Congress; Senators by the state legislature; and deputies by municipal councils. (This provision was changed in 1945 by constitutional amendment providing for election of deputies by direct vote.) The state and municipal governing bodies are also elected by direct vote. Isaías Medina Angarita became President in 1941 for a 5-year term. In Oct. 1945 the Medina Government was overthrown by revolution, and Rómulo Betancourt became head of a provisional junta.

The People. According to the census of 1941, about 3 per cent of the population of Venezuela was Indian; classification by race, except Indian, is not included in Venezuelan census figures. Densities of population range from 1.0 persons per square mile in the State of Bolívar to 155.9 in the State of Nueva Esparta. Highest regional density is in the vicinity of Caracas. The largest cities are: Caracas, 269,000; Maracaibo, 110,000; and Valencia, 49,200.

Spanish is the official language. Roman Catholicism is the predominant religion.

According to the census of 1936 nearly 30 per cent of the population was literate. In 1941 there was a total enrollment of 272,007 in 5,155 elementary schools; enrollment in 96 intermediate schools totaled 7,213; and there were 2,950 students in two universities. In 1944, seven new elementary schools were established to instruct more than 4,000 pupils, and 6 new high schools are under construction or soon to be built. Student registration in secondary schools in 1944 totaled 11,590. The Normal School in Caracas, with a primary school for 1,000 students was completed in that year.

National Economy. Although agriculture is the basis of Venezuela's economy, the country depends heavily on oil exports. The principal export crops are coffee and cacao, but sugar, corn, rice, potatoes, tobacco, fruits and vegetables, cotton, and sisal are important. Cattle raising is also an important occupation.

Next to the United States, Venezuela is the Western Hemisphere's greatest supplier of oil, and is one of the world's largest exporters of petroleum. Petroleum and its derivatives represented over 93 percent of the total value of exports in 1938 and 90 percent in 1942. In 1944 Venezuela produced 12 percent of the world's oil with a total of 38,340,000 tons, a record production representing an increase of 43 percent over 1943. Total crude oil production in 1944 amounted to 257,045,688 barrels. Venezuela also produces gold and diamonds, about 30 percent of which are industrial diamonds. Other minerals include coal, silver, copper magnesite, tin, asphalt, asbestos, mica and salt.

Manufacturing in Venezuela is largely confined to consumer goods. Cotton textiles, soap, cigars, cigarettes, candles, cheese, and vegetable oils are the chief articles made.

Foreign Trade. In 1942 total exports were valued at 711,600,000 bolivares, and total imports at 215,991,215 bolivares. Petroleum and its derivatives accounted for more than 90 percent of total

exports. In that year about 61 percent of Venezuelan exports were shipped to Curacao and Aruba, and 15 percent to the United States. In 1942 textiles accounted for 18 percent of all imports; food and beverages 17 percent, metals and manufactures 15 percent, machinery and accessories 14 percent, and chemicals 8 percent. That year the United States supplied 73 percent of imports, the United Kingdom 7 percent, Argentina 6 percent and Brazil 4 percent.

For the first 9 months of 1944 the total value of exports, adjusted to represent the market value of petroleum shipments, amounted to 562,900,000 bolivares (\$173,940,000), about a 40 percent increase over the corresponding period of 1943. Shipments of crude petroleum and derivatives during this period were valued at 514,000,000 bolivares (\$158,830,000). Less than 10 percent of the total value of Venezuelan exports is composed of non-petroleum products. Of these coffee and cacao represented 57 percent of the total; gold, cattle, fruits and vegetables, fish products, mineral products, and alcoholic beverages each represented less than 10 percent.

Imports to Venezuela during 1944 were estimated at slightly more than 600,000 metric tons; the value of imports during the first 9 months of the year amounted to 242,600,000 bolivares (\$74,963,000), of which the United States supplied 78 percent. Other South American countries provided 13 percent of the total, and shipments from Europe and other sources accounted for 5 percent.

Events. State legislatures convened throughout the republic on Jan. 2 to take action on Administration-sponsored constitutional reforms providing for direct election of Deputies, federal control of the judiciary, and legalization of Communist and other "exotic" parties. The legislatures would also elect national Senators, and seven of them had local amendments before them calling for choosing of state governors by the legislatures instead of by Presidential appointment.

President Isaías Medina Angarita, in his New Year's message, called for the triumph of democracy in the Americas and asserted that the United Nations' victory would bring "world security, justice, and democracy."

One-half of the Chamber of Deputies was elected by municipal councils on Jan. 19, to take office on Apr. 19. The administration Venezuelan Democratic Party (PDV) won an overwhelming victory.

Foreign Minister Caracciolo Parra Pérez declared on Feb. 16 that "The national Government recognizes the existence of a state of belligerency between Venezuela on one side and Germany and Japan on the other." He stated that the republic had been in a state of belligerency since December, 1941, but that the status had not previously been formally recognized. The Foreign Ministry announced on Mar. 13 that Venezuela and the Soviet Union "have arrived at an accord for the establishment of diplomatic and consular relations"; relations were formally established in Washington the next day.

A convention of the Venezuelan Democratic Party met in Caracas on Apr. 1 to discuss 1946 presidential candidates and to select a new national directorate. The convention approved the administration's foreign policy after Senate Chairman Manuel R. Egana had denounced the nation's state of belligerency with the Axis and adherence to the United Nations declaration as unconstitutional.

A demonstration supporting the return of former President General Eleázar López Contreras to the presidency took place in Los Teques early in April.

Leftist papers accused sectors of the PDV of supporting López.

Congress began its session on Apr. 19, with adoption of constitutional amendments and consideration of agrarian reform its main concerns.

President Medina, in his message to Congress, declared that strengthening of inter-American co-operation was the basic principle of Venezuelan foreign policy. He also stated that government revenues in 1944 amounted to about \$162,000,000; that oil production totaled 40,865,766 cubic meters and was the highest in the nation's history; and that the cost of living rose only 2 percent in 1944.

On April 25 the Chamber of Deputies approved constitutional amendments legalizing Communist activity and permitting women to vote in municipal elections. A few days later the Chamber adopted a resolution condemning dictatorial regimes, particularly those in the Americas. Venezuela's state of belligerency against the Axis and adherence to the United Nations declaration were approved by the Congress on May 2.

President Medina's signature, on May 5, made effective the constitutional reforms legalizing Communist activity, strengthening federal control of state judiciaries, and permitting women to vote in municipal elections.

The largest budget in Venezuelan history was submitted to the Congress in May. It called for some \$148,470,000, of which the largest item, about \$41,400,000, was earmarked for the Public Works Ministry; much of this was to be used for school construction.

The opposition leftist Acción Democrática party opened its convention on May 26 in Caracas. Resolutions approved included demands that the Government sever diplomatic ties with Spain and the Dominican Republic, take an active part in solving the problems of European colonies in the Western Hemisphere (especially Curaçao, Aruba and Trinidad), cooperate in the "liberation" of Puerto Rico, and work for the restoration of Gran Colombia. The party did not nominate a presidential candidate.

The Venezuelan Senate approved early in June a resolution establishing penalties for racial discrimination, as the result of a United States negro singer having been refused admittance by three hotels in Caracas.

The national directorate of the Venezuelan Democratic Party on June 6 rejected López Contreras as the party's presidential candidate for 1946. But the Merida state unit gave López its support, and the General, after being removed from active army duty, started on a tour of the country.

Sixteen leaders of the leftist Unión Popular Venezolana, headed by party leader Juan B. Fuenmayor, resigned from that organization on June 20 to form a Communist party "from which we shall tirelessly fight against reaction until we achieve the ideal of setting up a socialist regime in Venezuela."

The Cabinet was reorganized on July 14 in what political commentators interpreted as a move to strengthen the hand of Medina in the forthcoming political campaign.

Congress adjourned on July 17 after a heated session in which it rejected proposed reforms in labor legislation as well as the projected constitutional amendment providing for direct election of the President. A special session of Congress met on July 23 to consider administration-sponsored alterations in the agrarian and electoral laws and to consider reform of the civil and penal codes as well as to ratify the United Nations Charter.

Politics were upset on the eve of the Venezuelan Democratic Party's nominating convention when it was announced that, because of ill health, Diógenes Escalante, Ambassador in Washington, would not be a candidate for the presidency. His nomination had been virtually certain. The convention was postponed for two weeks while party leaders sought a substitute. Their choice, nominated Oct. 1, was Agriculture Minister Angel Biaggini, who described his politics as center-left.

The opposition leftist Acción Democrática party met again early in October. It refused to support Biaggini nor would it accept López Contreras, who was expected to be Biaggini's major opponent. It suggested that all parties agree on a candidate to take office in May, 1946, for only one year, while the Constitution was being amended to permit election of a President by direct universal suffrage in 1947.

On Oct. 15, an independent group, which called itself the Agrupaciones Pro-Candidatura Presidencial, nominated López Contreras. On Oct. 16, Medina assured López that the Administration would respect the free exercise of all citizens' political rights in the forthcoming campaign. On Oct. 17, the first mass meeting of the recently legalized Communist party was held.

On Oct. 18 the rank and file of the army, led by young officers, revolted. They seized the Maracay army base, and after a day and night of fighting, were masters of Caracas, the port of La Guaira, and several interior towns. There was desultory fighting in Caracas through Oct. 20, and forces in the isolated western states remained loyal to the government in the early stages of the revolt. But by Oct. 21 the rebels were in complete control of the country. The revolt had started among the soldiers, but they were quickly joined by the Acción Democrática party, and a ten-man Provisional Government was set up under the AD leader, Rómulo Betancourt. The young officers had apparently rebelled against the dynasty of older officers like Medina and López who ruled the army as a clique, while Acción Democrática was motivated by the hopelessness of overthrowing Medina's well-entrenched political machine at the polls. And behind both groups, and the popular support they received, was economic discontent.

The program outlined by Provisional President Betancourt promised: (1) restoration of civil liberties as soon as tension eased; (2) permission for all political parties to function within their "constitutional rights;" (3) free press; and (4) convocation of a constituent assembly to frame a new Constitution.

In the economic field, Betancourt outlined a three-point anti-inflationary program: (1) reduced import duties, (2) appeal to the United States for needed transportation equipment, and (3) expansion of national production, particularly agricultural. He declared that his Administration would welcome continued foreign investments on a basis of "mutual profit," and that expropriation of petroleum properties or cancellation of oil leases were not contemplated. The fortunes of former political leaders were frozen pending investigation of the means by which they were acquired; Medina and López Contreras were exiled to the United States; revolutionary army leaders pledged themselves to keep out of politics; and Betancourt reiterated that his regime was transitional and would withdraw as soon as a new government could be elected directly by the people. Pledges of support were received from virtually all organized political and social groups in the country, and

the other American republics recognized the new Government within a few days. The Dominican Republic was an exception. That country's diplomatic staff had been withdrawn from Caracas because of "Scandalous attacks . . . in violation of all international usage." The Dominican action, Betancourt said, had "deprived the revolutionaries of the pleasure of breaking relations with Trujillo."

The Provisional Government devoted itself, during the next two months, to destruction of the old political machine, and preparations for the restoration of political normality. Its primary battle was against the high cost of living. As the year ended, a number of new parties were in process of formation, and a new electoral decree, setting up the machinery for election of a constituent assembly, was nearing completion.

HARRY B. MURKLAND.

VETERANS' ADMINISTRATION. An independent agency of the U. S. Government created in 1930 under an Act of Congress which authorized the President to consolidate and coordinate under a single control governmental Agencies dealing with veterans' affairs. It administers all laws relating to the relief of, and other benefits provided by law for, former members of the military and naval forces.

On June 30, 1945, there were 567,934 United States Government life insurance policies in force representing \$2,454,855,781 of insurance. Disbursements for this type of insurance during the fiscal year 1945 totaled \$32,273,258. Monthly payments on yearly renewable term insurance policies were being made to 9,301 permanently and totally disabled veterans and to the beneficiaries of 2,042 deceased veterans. Disbursements for term and automatic insurance during the fiscal year 1945 were \$19,756,072, including \$12,941,477.28 transferred to the U.S. Government life insurance fund for cases traceable to extra hazards of military or naval service, making a net disbursement of \$6,814,594. During the fiscal year there were approved 2,206,813 applications for National Service life insurance aggregating \$20,398,204,000 of insurance. The policies in force on June 30, 1945, totaled 15,944,158 representing \$123,579,575,163 of insurance. Benefits had been awarded on June 30, 1945, in 223,626 cases on insurance valued at \$2,039,225,100. The average contract insurance in force at the time of the veteran's death was \$9,191. Disbursements during the fiscal year 1945 for this type of insurance totaled \$136,846,767. Through June 30, 1945, there had been received 103,227 applications for insurance benefits under the Civil Relief Act of October 17, 1940. Of this number 87,037 applications representing \$216,993,141 of insurance had been approved.

On June 30, 1945, the total hospital load was 71,439 patients, of whom 71,229 were United States veterans. Of the United States veterans, 66,818 were in Veterans' Administration hospitals, 2,958 in other Government hospitals, and 1,453 in Civil and State institutions. On the same date, the veteran population in domiciliary status in Veterans' Administration homes totaled 8,779. In addition, an average of 4,159 veterans was cared for in State or Territorial homes during the fiscal year 1945.

Payments for pension, compensation or retirement pay were, on June 30, 1945, being paid to 1,144,088 living veterans and to the dependents of 369,498 deceased veterans. The net disbursements during the fiscal year for this purpose totaled \$739,581,650.59.

As of June 30, 1945, there were 14,986 veterans of World War II receiving vocational training to overcome the handicap of a service connected disability. On the same date there were 764 cases in which the veteran had been rehabilitated. As of June 30, 1945, there were 22,335 veterans receiving education and training under the provisions of Public Law 346, 78th Congress; and those who had completed courses were numbered 900.

The net disbursements made by the Veterans' Administration during the fiscal year 1945 from all appropriations and trust funds totaled \$2,271,318,333. This amount includes adjustments on lapsed appropriations but does not include disbursements from trust funds for investment purposes.

OMAR N. BRADLEY.

VIRGIN ISLANDS, U.S. An insular possession of the United States, situated about 70 miles east of San Juan, Puerto Rico. This possession, acquired in 1917 for \$25,000,000 through a treaty with Denmark, forms part of the chain of the Lesser Antilles which extends from Puerto Rico to the coast of South America. Of the 50 islands in the group only the three largest are inhabited—St. Thomas, St. John, and St. Croix. Total area, 132 square miles; population, 24,889 in 1940; 22,012 in 1930. Areas and populations (1940) of the individual islands: St. Thomas, 28 square miles, 11,265 inhabitants; St. John, 20 square miles, 722 inhabitants; St. Croix, 84 square miles, 12,902 inhabitants. Of the whole population, 69 per cent in 1940 were Negroes, 22 per cent of mixed race, 9 per cent whites; 1942's birth rate 34.8, death rate 18.9, per 1,000. Capital, Charlotte Amalie (pop. 9,801 in 1940) on the island of St. Thomas. Illiteracy is practically confined to the population over 21 years of age (16 per cent in 1930). Most of the people speak English.

Defenses. The islands are the most eastern outpost of the United States and are situated so as to furnish protection both to United States holdings in the Caribbean Sea and the Panama Canal. The fine harbor of Charlotte Amalie provides shelter for as many as 23 warships at one time. Defenses constructed in this region during the past few years have been primarily to bulwark the great naval, military, and air bases in Puerto Rico. They include a permanent U.S. Marine Corps air base near Lindbergh Bay on St. Thomas, a large submarine base at Charlotte Amalie Harbor, and a U.S. Army air base on St. Croix near Frederiksted.

Production and Trade. St. Thomas has largely depended upon commerce, trade, and shipping, and its resources have grown by defense activities. On the other hand the municipality of St. Croix has depended chiefly upon agriculture for its revenues. During recent years there have been repeated droughts resulting in decreases in sugar production and cattle raising, with resulting unemployment.

Finance. For the fiscal year ended June 30, 1944, actual revenues of the municipality of St. Thomas and St. John were \$1,617,705 while total budget appropriations were \$1,559,989. Revenues of the municipality of St. Croix were \$262,685 in 1943-44 while total budget appropriations were \$412,515. The Federal appropriation for the Government of the Virgin Islands in 1943-44 totaled \$373,635, of which \$186,820 was for the central administration, \$46,815 for the agricultural experiment station, and \$140,000 for the deficit of the municipality of St. Croix.

Government. During the first 14 years of American control the Virgin Islands had a naval government.

In 1931 jurisdiction was transferred from the Navy Department to the Department of the Interior and a civil governor was appointed by the President. Congress passed an Organic Act for the islands in 1936 which effected little change in the structure of the government although it did allow for a greater measure of political freedom. The autonomy of the two municipalities was retained and both have Municipal Councils, which when called in joint session, constitute the Legislative Assembly. The Governor is appointed by the President and holds office at his pleasure. Governor in 1945, Charles Harwood (assumed office, Feb. 3, 1941).

Events, 1945. Shortly after the military defeat of Germany, Congress authorized an appropriation of \$10,000,000 for public improvements, such as hospitals, sewerage systems, water supplies, schools, streets, highways, recreational facilities, telephone and radio communications, malaria control projects, slaughterhouses, and markets. \$150,000 of this appropriation was set aside for an engineering survey. The projected improvements were scheduled to take place over a period of five years. A large reconstruction program was planned which would convert these islands into a popular tourist resort and convalescent center for veterans.

President Truman nominated Judge William H. Hastie, dean of Howard University Law School, to succeed Governor Charles Harwood. A former justice of the U.S. Circuit Court in the Virgin Islands from 1937 to 1939, and the first Negro to serve on the Federal bench, Judge Hastie's nomination was to be sent to the U.S. Senate on January 14, 1946, for confirmation.

CHARLES F. REID.

VITAL STATISTICS. During October, 1945, the total population of the United States passed 140,000,000. Some months earlier the estimated number of families reached 37.5 million, a rise of 2.5 million since the last Census in 1940.

Owing to high wartime birth rates, the population under five years was about 2.5 million greater than in 1940, this increase equalling a year's total births in normal times. On the basis of State reports for the first eleven months, total births were 2,730,000, 2.3 percent under 1944.

In the five and a quarter years from April 1, 1940, to July 1, 1945, the nation added over 8 million new Americans. Of these, net civilian immigration accounted for 594,109, there being excesses of arrivals over departures; of immigrant aliens, 143,437; non-immigrant aliens, 184,972; U.S. citizens, 265,700. While the birth rate dropped somewhat from the preceding year's high figure, the death rate went down also, reaching 10.4 per 1,000 in spite of military losses. Infant mortality in particular made a better showing, being held down to 37.8 per 1,000 live births.

The over-all picture is indicated by November's record: births, 19 per 1,000 of total population including the armed forces overseas; deaths, including military losses, 10.3 per 1,000.

There were 1,600,000 marriages during the year, 10.8 percent more than in 1944, and only 1 percent under 1942, the peak year for the nation. See MARRIAGE STATISTICS.

Causes of Death. The three leading causes of death in the United States have strengthened their position during the war years while decreases occurred in the death rates for nephritis, tuberculosis, pneumonia and influenza, Director J. C. Capt of the Bureau of the Census announced:

"Diseases of the heart accounted for 29.6 percent of the deaths in 1944, excluding the armed forces

overseas, as compared with 29.2 percent in 1943 and 26.9 percent of the deaths in the three-year period, 1939-1941."

The second leading cause of death, cancer and other malignant tumors, resulted in 12.1 percent of the deaths in 1944 compared with 11.4 percent in 1943 and 11.2 in the 1939-1941 period. The third leading cause of death, intracranial lesions of vascular origin, was responsible for 8.8 percent in 1944 compared with 8.7 percent in 1943 and 8.4 percent in the 1939-1941 period.

On the other hand, nephritis caused 6.5 percent of the deaths in 1944 compared with 7.5 percent in the 1939-1941 period; pneumonia and influenza 5.8 percent compared with 6.6 percent; and tuberculosis 3.9 percent in 1944 compared with 4.3 percent in the 1939-1941 period.

Deaths from the 10 leading causes formed 76.7 percent of all deaths in the 1939-1941 period, a proportion which increased to 77.9 percent in 1943 and to 78.3 percent in 1944.

While there were 1,411,338 deaths from all causes in 1944, a decline of 48,206 from 1943, there were 4,323 more deaths from cancer and other malignant tumors and 459 more deaths from motor vehicle accidents. Yet the 1944 death rate for motor-vehicle accidents, 18.3 per 100,000 population, was 32.2 percent below the motor-vehicle accident death rate of 27.0 for the 1939-1941 period, a decrease due chiefly, if not entirely, to the wartime restrictions imposed on speed, tires and gasoline.

The following tables give the number of deaths from the 10 leading causes, and death rates per 100,000 estimated population, excluding the armed forces overseas, for the years 1944, 1943, and the average for 1939-1941.

NUMBER OF DEATHS FROM THE 10 LEADING CAUSES OF DEATH UNITED STATES, 1944, 1943, AND AVERAGE FOR 1939-1941

Causes	1944	1943	Average 1939-1941
All causes	1,411,338	1,459,544	1,400,936
Diseases of the heart . . .	418,062	426,391	377,322
Cancer and other malignant tumors	171,171	166,848	157,369
Intracranial lesions of vascular origin	124,250	127,300	117,768
Nephritis	91,687	99,267	105,272
Pneumonia (all forms) and influenza	81,804	90,115	92,201
Accidents excluding motor-vehicle accidents	70,955	75,215	61,388
Tuberculosis (all forms)	54,731	57,005	60,429
Diabetes mellitus	34,948	36,314	34,096
Premature birth	33,120	34,563	32,646
Motor-vehicle accidents	24,282	23,823	35,619

DEATH RATES PER 100,000 ESTIMATED POPULATION, EXCLUDING THE ARMED FORCES OVERSEAS

Causes	1944	1943	Average 1939-1941
All causes	1,064.7	1,089.5	1,061.7
Diseases of the heart	315.4	318.3	285.9
Cancer and other malignant tumors	129.1	124.5	119.3
Intracranial lesions of vascular origin	93.7	95.0	89.2
Nephritis	69.2	74.1	79.8
Pneumonia (all forms) and influenza	61.7	67.3	69.9
Accidents excluding motor-vehicle accidents	53.5	56.1	46.5
Tuberculosis (all forms)	41.3	42.6	45.8
Diabetes mellitus	26.4	27.1	25.8
Premature birth	25.0	25.8	24.7
Motor-vehicle accidents	18.3	17.8	27.0

VOCATIONAL REHABILITATION, Office of. An agency of the U.S. Government which is the central instrument in the Federal-State system for restoration of disabled persons to the fullest physical, mental, social, vocational and economic usefulness of their capabilities. Established July 6, 1943, as a constituent of the Federal Security Agency, the Office of Vocational Rehabilitation is charged with certification of Federal funds for States' use in rehabilitation work, establishing standards in the various areas of service and furnishing technical assistance to the States.

The system is financed through grants-in-aid from the Federal Government to the States.

During the fiscal year 1945, 161,047 disabled persons received services from 51 State general rehabilitation agencies and 27 commissions for the blind. Of this number, 41,925 disabled men and women returned to gainful employment and their cases were closed to the satisfaction of both employer and employee. The types and extent of disabilities overcome through the 1945 rehabilitation program are reflected in the following breakdown:

Orthopedic involvements other than cerebral palsy and poliomyelitis, 11,235 cases; amputations and congenital absence of members, 7,304; vision defects, 3,806; hearing defects, 3,597; poliomyelitis, 2,992; pulmonary tuberculosis, 2,497; mental, 2,354; cardiac, 1,760; hernia, 1,364; cerebral palsy, 627; asthma, 583; speech defects, 286; other, 3,344; not reported, 176.

The far-reaching effects of the Federal-State program during the past fiscal year is evidenced in the fact that whereas the annual income of these men and women totaled only \$12,000,000 before rehabilitation, and a large part of this consisted of contributions, they were earning at the rate of \$72,000,000 a year after rehabilitation.

Services to render the handicapped more advantageously employable, provided under Federal and State laws, include medical, surgical and psychiatric care, hospitalization, artificial appliances, vocational guidance and training, maintenance during training, and placement in employment. Physical examination, counsel and training are provided without cost to the applicant in all cases; other services are provided without cost to the extent of the applicant's inability to pay for them.

The Vocational Rehabilitation Act of 1920 was the activating force for the program, and its scope was expanded by amendment in 1943. Under the new amendments, mentally as well as physically disabled individuals now are eligible for rehabilitation services. Specific provision is made for the blind; war-disabled civilians such as members of the citizens defense corps, aircraft warning service, civil air patrol, the merchant marine, and United States civil employees.

Fiscal provisions have been liberalized. Grants to the States may now be based on actual requirements and the amount of State funds available for matching. Under the 1943 amendments, the Federal Government assumes the entire cost of administering State programs, and half the costs of medical examinations, surgical and therapeutic treatment, hospitalization, prosthetic devices, transportation, occupational tools and licenses, training and maintenance. The Federal Government assumes the entire cost of these items for war-disabled civilians.

State programs are administered by Divisions of Rehabilitation within the State Boards of Vocational Education. Where there is a State Commission or other agency authorized to provide rehabil-

itation services for the blind, that Commission or Agency administers the part of the rehabilitation program pertaining to that group.

The program is in operation in all 48 states, the District of Columbia, Hawaii and Puerto Rico. The Office of Vocational Rehabilitation maintains seven regional offices for close working relation between the States and the Federal offices. Regional offices are located as follows: Boston (covering Connecticut, Maine, Massachusetts, New Hampshire, New York, Rhode Island and Vermont); Washington (covering Delaware, District of Columbia, Maryland, New Jersey, Pennsylvania, Virginia and West Virginia); Atlanta (covering Alabama, Florida, Georgia, Mississippi, North Carolina, Puerto Rico, South Carolina and Tennessee); Chicago (covering Illinois, Indiana, Iowa, Kentucky, Michigan, Minnesota, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin); Kansas City (covering Arkansas, Kansas, Louisiana, Missouri, New Mexico, Oklahoma, Texas); Denver (covering Colorado, Idaho, Montana, Utah, Wyoming); and San Francisco (covering Arizona, California, Hawaii, Nevada, Oregon and Washington).

MICHAEL J. SHORTLEY.

VOLCANO ISLANDS. A chain of islands in the western Pacific, about 710 miles south of Tokyo; also known as *Kazan Retto*. Iwo Jima, the principal island has an area of 8 square miles, and has a number of peaks—the highest being Suribachi (546 ft.) at the southern tip of the island. The other islands are Kita, and Minami. Total area: 10 square miles. Population (1940 estimate): 1,151. Under Japanese rule, Iwo Jima was a fortified air-base. On Mar. 16, 1945, it was captured by armed forces of the United States after a 26-day battle.

WACS. The women's auxiliary of the U.S. Army. For its organization (as WAAC), see *YEAR BOOK* for 1942, p. 757. The number of Wacs in the service during 1945 was approximately 100,000. Recruiting was discontinued after Sept. 1, 1945.

WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS. These Divisions of the U.S. Department of Labor administer the Fair Labor Standards Act of 1938, commonly called the Federal Wage and Hour Law, and the Walsh-Healey Public Contracts Act. Thirteen directors head the regional offices and Minnesota and North Carolina have special cooperative agreements with the Divisions to enforce the Acts.

Pursuant to the industry committee procedure provided by Congress, wage orders prescribing a 40-cent minimum wage were established for all employees covered by the Fair Labor Standards Act, numbering more than 20,000,000, in the United States, outside of Puerto Rico and the Virgin Islands. These wage orders were established more than a year in advance of Oct. 24, 1945, the statutory deadline for a universal 40-cent minimum in the United States, except for Puerto Rico and the Virgin Islands. Special minimum wage rates have also been set for all industries in Puerto Rico and, with a few minor exceptions, all industries in the Virgin Islands.

During the fiscal year which ended June 30, 1945, 44,271 inspections were completed under both Acts and 42,613 establishments were found subject to the Acts' provisions. Of the 44,271 establishments inspected, 32,834 or 74 percent were found in some violation, while 22,257 or 50 percent were in violation of the minimum wage or overtime provisions of the Acts.

Restitution of \$15,824,377 of illegally withheld wages was agreed to or ordered paid to 442,516 workers in 19,064 establishments. The amount of restitution found due per inspected establishment was higher than the previous year, reaching an all time high. Failure to pay the minimum wage of 30 to 40 cents an hour was involved in more than a fourth of these cases and restitution of such minimum wages was found due more than 77,000.

In the six years and nine months that the Fair Labor Standards Act had been in force through the end of the fiscal year, about \$85,000,000 in restitution of illegally withheld wages had been agreed to or ordered paid to almost 2,500,000 workers in about 110,000 establishments, with more than two-fifths of the cases involving failure to pay the minimum wage of 40 cents an hour. More than this amount has probably been collected in addition over the period, through private negotiation or action by employees and their unions under a section of the Act which provides that if an employee has not been paid the minimum wage or time-and-half overtime after 40 hours a week, he shall be entitled to an additional equal amount as liquidated damages.

Since many establishments are covered under both the Fair Labor Standards and Public Contracts Acts, each of which may call for the payment of restitution in any given case, it is impossible to give separate figures for restitution found due under either Act. Of the 44,271 inspections completed during the year, 9,384 were made under the Public Contracts Act, and of these all but 160 were concurrent with Wage-Hour inspections. Violations were found in 54 percent of the Public Contracts inspections, and 32 percent of such inspections disclosed violation of the minimum wage or overtime provisions.

With more than three times as many minors in the labor force as there were before the war, the number of child labor violations under both Acts continued to increase. During the year, approximately 3,500 establishments employing minors in violation of the Fair Labor Standards Act were reported to the Children's Bureau by the Wage and Hour and Public Contracts Divisions. Over two-thirds of these establishments were in violation of the Act's child labor provisions, employing more than 13,000 minors in "oppressive" child labor. Nearly 20 percent more establishments were found in violation last year than during the preceding fiscal year and over 100 percent more than during 1943, while the number of minors illegally employed increased 58 percent over 1944 and 191 percent over 1943.

The child labor provisions of the Public Contracts Act provide that no boy under 16 or girl under 18 shall be employed on Government contracts in excess of \$10,000. A former wartime exemption permitting employment of girls between 16 and 18 years of age under certain conditions has been revoked, so that under no circumstances may girls under 18 be employed on contracts awarded after September 4, 1945. During the year, almost 700 firms were penalized for child labor violations under the Public Contracts Act, and the liquidated damages (\$10 for each day that each minor is employed under conditions prohibited by the Act) amounted to almost \$800,000. Although, due to a decrease in staff, inspections under the Public Contracts Act along with Wage-Hour inspections decreased during 1945 by approximately 20 percent from the previous year, the number of establishments in which child labor violations were found increased by 50 percent.

The Wage and Hour and Public Contracts staff is charged further with the inspection of safety and health conditions in those plants holding public contracts.

Following a decision of the Supreme Court, sustaining the Administrator's authority to restrict industrial homework under Section 8(f) of the Fair Labor Standards Act, an extensive homework enforcement program was initiated in the seven industries for which regulations restricting homework had been issued by the Administrator: Jewelry Manufacturing, Gloves and Mittens, Knitted Outerwear, Button and Buckle Manufacturing, Women's Apparel, Handkerchief Manufacturing and Embroideries. No homemaker may be employed in any of these restricted industries unless a special homework certificate is obtained from the Divisions permitting his or her employment. Homework handbooks issued by the Divisions must be supplied to and kept for homeworkers in these industries, and all other homeworkers covered by the Fair Labor Standards Act and their employers must preserve and maintain pay roll or other records for each and every one of them in accordance with homework record-keeping regulations issued by the Administrator.

During the year, proceedings for injunctions against future violations of the wage and hour provisions were instituted in 371 cases, while the criminal penalties which the statute provides for cases of wilful violation were invoked in 39 cases. In an additional 39 cases the Department of Justice authorized criminal prosecutions which had not yet been commenced at the close of the year. Contested cases showed a substantial increase over the previous year, with 106 cases contested.

Significant among the decisions of the U.S. Supreme Court relating to the Fair Labor Standards Act were three cases concerning the interpretation of the overtime provisions of the Act: *Walling v. Helmerich & Payne*, *Walling v. Youngerman-Renolds Hardware Co.*, and *Walling v. Harnishfeger Corp.* All three disapproved wage agreements designed to avoid payment of the overtime premium, and made it clear that agreements stipulating a rate which is not the actual regular rate do not meet the statutory requirements.

Another decision of great public interest was *Jewell Ridge Coal Corp. v. United Mine Workers of America, Local No. 6167*, which held that underground travel in bituminous coal mines was work or employment compensable under the Act.

During the war, along with the regular enforcement of the Fair Labor Standards Act and the Public Contracts Act, the Divisions participated in the Wage Stabilization program as agents of the War Labor Board. Many requests for rulings and applications for voluntary increases as well as jurisdictional and interpretative questions were handled, and inspections of employers' records were made to determine conformity to wage stabilization policies.

Equally important during the war was the special service rendered by the Divisions' trained factory inspection forces in connection with the original tire inventory for the Office of Price Administration, production requirement audits for the War Production Board, and inspections to determine adherence to the War Manpower Commission's regulations imposing restrictions in the employment of labor.

L. METCALFE WALLING.

WAKE ISLAND. An atoll consisting of three islets—Wilkes, Peale and Wake—which are separated by

narrow shallow channels and enclose a triangular lagoon $4\frac{1}{2}$ miles long. Total area: 4 square miles. Its location makes it valuable as a cable station between Hawaii and the Philippine Islands and between Midway and Guam. Wake lies 2,130 miles west of Honolulu and 1,185 miles west of Midway. Previously uninhabited until May, 1935, Wake Island became an air depot on the transpacific route of Pan American Airways. Construction of a U.S. naval air base and submarine base was begun on April 19, 1939, and these installations were partially completed at the time of the Japanese attack on December 8 (December 7 in the U.S.). On Dec. 23, 1941, the island was surrendered to overwhelming Japanese armed forces.

Events, 1945. Between Feb. 24, 1942, and July, 1945, the island was effectively blockaded by air and sea and was the target of intermittent attacks by ships and bombers. On July 7 a U.S. Navy warship stood by without firing a shot to allow a Japanese hospital ship the right to evacuate 974 starved, sick, and wounded patients. On September 4 the American flag flew over Wake Island after 43½ months of Japanese occupation. The surrender document was signed aboard the destroyer escort U.S.S. *Levy* by Rear Adm. Shigematsu Sakaibara, Japanese commander, who turned over the island, his 1,250 men, and his command to Brig. Gen. Lawson Sanderson, head of the 4th Marine Aircraft Wing.

CHARLES F. REID.

WAR COMMUNICATIONS, Board of (BWC). The Board of War Communications (formerly the Defense Communications Board) was created by Executive Order, Sept. 24, 1940, to coordinate plans for the most efficient use of the country's radio, wire, and cable facilities during the national emergency. After Pearl Harbor, the President empowered the Board to use, control, or close down communications facilities where necessary to the war effort and to set up preferences or priorities in the handling of essential war communications.

The Board membership is composed of the Chairman of the Federal Communications Commission, who, under the order creating the BWC, also serves as Chairman of the Board; the Chief Signal Officer of the Army; the Director of Naval Communications; the Assistant Secretary of State in charge of the Division of International Communications; and the Assistant Secretary of the Treasury in charge of Treasury Enforcement Activities. The Chief of Communications of the U.S. Coast Guard serves as Assistant Secretary to the Board.

The BWC has no paid personnel, appropriations, or funds. It operates through a Coordinating Committee and a Law Committee staffed by personnel from the five agencies represented on the Board. A Labor Advisory Committee and an Industry Advisory Committee submit recommendations to the Board on problems referred to them. There are, in addition, twelve numbered committees, made up of experts in all fields of wire and radio communications, who serve the Board in an advisory capacity.

In light of the conditions during the 1945 calendar year, the BWC issued seven orders canceling or lessening restrictions imposed by previously issued orders, deemed necessary for the national security and defense and the successful conduct of the war.

The orders still operative are: No. 1, directing that all radio station facilities aboard all vessels within jurisdiction of the U.S. shall be subject to use, control, supervision, inspection, or closure by

the Navy Department, if deemed necessary for national security; No. 2, authorizing the Navy Department to use, control, supervise, inspect, or close coastal and marine relay radio stations; No. 4, requiring registration with the FCC of apparatus which generates radio-frequency energy; No. 20, prescribing regulations governing priority for urgent telephone toll calls; No. 22, prohibiting the leasing of communications circuits in submarine cables without prior approval of the BWC; No. 24, authorizing the use and control of international radio broadcast stations WRUL, WRUS, and WRUW by the OWI; No. 26, outlining priority for urgent teletypewriter exchange messages essential to the war effort or public safety; and No. 27, 27A, 27B, and 27-C, outlining the precedence for telegraph messages essential to the war effort or public safety.

PAUL A. PORTER.

WAR DEPARTMENT. The Department of the U.S. Government which is charged with the responsibility of organizing, training, and maintaining the Army and certain non-military activities; created in 1789, succeeding a similar department which was established prior to the adoption of the Constitution. For organization and activities, see the articles on MILITARY PROGRESS and WORLD WAR in this and preceding YEAR BOOKS. Secretary of War in 1945: Robert P. Patterson; Under Secretary, Kenneth C. Royall.

WAR FINANCE DIVISION. A Division of the U.S. Department of the Treasury, organized under this name on June 25, 1943. Originally established as the Defense Savings Staff in 1941, and changed to War Savings Staff in 1942 (see previous YEAR BOOKS) its purpose is to stimulate the sale of securities, popularly known as War Savings Bonds and Stamps, offered to the public by the Treasury Department.

The War Finance Division and the War Finance Committees operate through four main branches: Banking and Investment, Labor and Industry, Community, and Promotion and Publicity, all under the direction of the National Director, who reports to the Secretary of the Treasury. The sales organization (field) consists of offices in all States, District of Columbia, Hawaii, Alaska, and Porto Rico, actively operating in the recruiting of volunteer committees, sales, and promotional personnel. The Washington organization plans campaigns and advises and services the field workers.

The Division enjoys the cooperation of all advertising media, including newspapers, radio, magazines and business publications, motion pictures, labor, business, schools, and many other groups. During the period May 1, 1941, through Apr. 30, 1944, it is conservatively estimated that the War Finance Division received more than \$250,000,000 worth of contributed advertising.

In addition to a comparatively small nation-wide paid staff, thousands of full-time volunteers, and hundreds of thousands of part-time volunteers (mounting to several millions during War Loan campaigns) are actively engaged in selling Treasury securities to the American public.

WAR MANPOWER COMMISSION (WMC) AND U.S. EMPLOYMENT OFFICE (USES). This Commission, which during the first nine months of 1945 placed millions of workers in war production industries and services, was abolished by Executive Order No. 9617 on Sept. 19, and the United States Employment Service began the reverse procedure of finding jobs

for millions of displaced war workers and returning veterans.

The President's Executive Order abolishing WMC at the same time ordered the transfer of the United States Employment Service, which had been the operating arm of WMC, together with certain functions, facilities and personnel of WMC to the Department of Labor. All manpower wartime controls were terminated when Japan surrendered.

In relinquishing his post as Chairman of the War Manpower Commission, Paul V. McNutt credited the USES with rallying the "mightiest labor force of all time from the 135 million American citizens of all races, creeds and walks of life." USES was responsible for more than 35 million war job placements in the four war years, Mr. McNutt said.

After the abolition of WMC, USES turned its attention toward the problem of reconversion employment needs, emphasizing placement and counseling of returning veterans and displaced war plant workers in peacetime jobs.

The peacetime task of assisting industry and the veterans and other job applicants had been anticipated by USES during the war. Counselors were placed at all Army separation centers as well as in a majority of the 1,725 local offices in the 48 States to advise discharged military personnel.

The last six months of 1945 were characterized by the heaviest workload in the history of USES. During this period the number of calls made at USES offices for job placements, job information, job counseling and related services increased from 4,900,000 in July to 10,000,000 during the month of December.

Adding heavily to the workload of USES during the last six months was the responsibility for the registering of a weekly average of 300,000 recipients drawing unemployment compensation during the month of July to 1,800,000 such recipients in December. Similarly the number of veterans receiving Servicemen's Readjustment Allowance who also had to register with USES increased from 39,000 in July to 450,000 in mid-December.

By the end of the year an estimated 3,300,000 veterans of World War II had registered with USES. The monthly number of new applications for jobs from veterans increased from 142,000 in July 1945 to 658,000 in December. The increase was continuous each month as the number of discharges of servicemen and women from the armed forces increased. The number of veterans registered with USES represents approximately 55 per cent of all discharged veterans as of Dec. 31.

Referrals of veterans to employers and placements of veterans in jobs also showed a monthly increase from July on with the exemption of December when suitable job opportunities began to decline. During July referrals of veterans totalled 187,000. In November they were 343,000. In December they dropped to 280,000. Placements of veterans in jobs rose from 87,000 in July to 128,000 in November. In December they were 117,000.

Referrals and placements of veterans and non-veterans combined showed a similar trend during the six months from July to December. In July referrals for both groups totalled 1,640,000, reaching a secondary peak of 1,327,000 in October and dropping to 1,096,000 in November and 815,000 in December. Placements of both groups totalled 1,014,000 in July, declining monthly to 380,000 in December. During the entire year a total of 122,000 disabled veterans were placed in jobs out of a total of 299,855 handicapped veterans who applied for jobs. The first part of the year was characterized

by a "tight" labor market during which USES resorted to intensive inter-regional recruitment of workers to staff war plants. Typical of such recruitment was that for the atom bomb project for which 300,000 workers were recruited.

In general, despite labor shortages during the first half of the year, USES was able to recruit needed manpower for the war effort.

ROBERT C. GOODWIN.

WAR MOBILIZATION AND RECONVERSION, Office of (OWMR). The OWMR was established pursuant to an Act of Congress approved Oct. 3, 1944 (Public Law 458, 78th Congress, Second Session). Director of the Office is John W. Snyder (The White House, East Wing); Deputy Directors: Hans A. Klagsbrunn (The White House, East Wing) and Anthony Hyde (Lafayette Building); General Counsel, Thomas I. Emerson (Lafayette Building); Economic Advisor, Richard M. Bissell; Housing Expediter, Wilson W. Wyatt; Chairman of the Advisory Board, O. Max Gardner.

Congress made OWMR responsible for (1) developing unified programs and establishing policies to adjust the natural and industrial resources and manpower of the United States to war needs and (2) coordinating government planning for reconversion of the same resources and manpower to peace. With respect to its responsibilities for reconversion, the Office was charged with:

- (a) the issuance of orders and regulations necessary to obtain the full coordination of federal agencies;
- (b) the recommendation of appropriate legislation to Congress;
- (c) the promotion and development of demobilization plans and procedures;
- (d) the settlement of controversies between federal agencies in the development of plans and procedures for transition from war to peace;
- (e) the simplification, consolidation or elimination of war agencies as the need for these agencies disappears;
- (f) the determination of the policies for relaxing emergency war controls;
- (g) the consultation and cooperation with State and local governments, industry, labor, agricultural, and other groups, concerning problems of transition from war to peace; and
- (h) the submission of quarterly reports to the President, Senate and House of Representatives covering the progress of these activities.

An Advisory Board, created by the Act establishing OWMR to represent the public interest, consists of:

Public Members—O. Max Gardner, N. C., Chairman; Mrs. Anna M. Rosenberg, N. Y.; Chester Davis, Mo.
 Industry—Eric A. Johnston, Wash.; George H. Mead, O.; Nathaniel Dyke, Jr., Ark.
 Labor—William L. Green, O., AFL; Philip Murray, Pa., CIO; T. C. Cashen, N. Y., Railway Labor Executive Association
 Agriculture—Edward A. O'Neal, Ala., Farm Bureau Federation; James G. Patton, Colo., National Farmers Union; Albert F. Goss, Washington, D. C., National Grange.

OWMR includes the following agencies which exercise their functions under the supervision of the Director:

- (1) Office of Contract Settlement—Robert M. Hinckley, Director, (Federal Reserve Building).
- (2) Surplus Property Administration—W. Stuart Symington, Administrator (Railroad Retirement Building).

The Retraining and Reemployment Administration, established by Title III of the Act creating the OWMR was transferred to the Department of Labor, Sept. 19, 1945.

From the time of its establishment, OWMR coordinated the nation's efforts to produce war requirements and to increase production of critical war items; and supervised the work of agencies developing uniform and orderly procedures for

handling the cancellation of war contracts, prompt settlement of such contracts, and disposal of surplus property. With the defeat of Japan, the agency has become increasingly responsible for government planning for reconversion. Arrangements were made to utilize essential wartime powers to assure the rapid resumption of production of civilian goods. Inventory controls and priorities were used to assure the equitable distribution of scarce materials. A program of adjusting prices to meet the new conditions was inaugurated.

At the same time under OWMR's supervision the work of liquidating the Government's wartime machinery was begun. Wartime government agencies and functions have been abolished rapidly. By the end of 1945, the great majority of wartime controls had been removed: i.e. all rationing controls except over sugar and automobile tires; 90 percent of production and materials controls; 99 percent of transportation controls; 85 percent of export and 75 percent of import controls. Only such controls were retained as were necessary to assist reconversion.

OWMR's major programs at the close of 1945 were directed towards stabilizing prices and obtaining the maximum of industrial production and employment during the transition from war to peace. Under a special program, it also was working to increase construction of housing.

JOHN W. SNYDER.

WAR PRODUCTION BOARD. The War Effort. Up to V-E Day and V-J Day, much was heard about total war and full mobilization. But great as the American war effort was, at no time did it absorb more than two-fifths of the total national output. The civilian economy continued to receive a greater total amount of commodities and services than in such good prewar years as 1937 or 1939.

This was accomplished by superposing war production on the normal production job, instead of by substituting guns for butter. There were some cuts in consumer durable goods. But larger amounts of soft goods and services made up for the denials of new automobiles and electric appliances and aluminum cooking utensils. Throughout the war, the people at home were subjected to inconvenience, rather than sacrifice.

Total output of goods and services rose by something more than 50 per cent, after allowance for price-level changes. (In dollars, before price adjustments, the increase was nearly 125 percent—from \$88.6 billion to \$198.7 billion.) Volume of manufacturing far outpaced the general rise. It was nearly tripled in the five years, as American plants poured out planes and guns, ships and shells, tools and trucks, plus civilian goods in volume. Output of raw materials increased by 60 per cent.

During 1942, new construction volume mounted to more than double the 1939 level. After the most urgently needed war-production facilities had been provided, manpower and materials were concentrated more on current production and less on facilities, so that in 1944, new construction volume was one-third below 1939.

While manpower was being steadily drawn into the armed forces, gross national product was maintained and increased by calling on the housewives of the nation, the youth of school age, the oldsters who had earned retirement, and the physically handicapped to supplement, and in part to replace, those who would normally staff the industries, trade, and services. The labor force increased in five years by such means from 54.1

million to 64.0 million or by almost 20 per cent. Out of the 10 million new workers, plus all but a few hundred thousand of the nine million unemployed of 1939, came the needed manpower and womanpower. These replaced the 10 million added to the military services and added 7.5 million to civilian employment. Most of this addition went into manufacturing plants. Agriculture, and later construction, actually lost workers.

Even the 7.5 million added workers would not have sufficed had they not been willing to work longer and harder than in peacetime. Between 1939 and 1944, the average work week increased from 37.7 to 45.2 hours or by 20 percent in manufacturing, from 32.4 to 39.5 hours in construction, and from 32.3 to 43.9 hours in mining. At the same time productivity—output per manhour—rose sharply. This rise in productivity, apparently in the neighborhood of 25 percent with respect to labor, was responsible for about one-third of the total increase in the production of finished goods between 1939 and 1944, while the rest is attributable to the increased input of productive factors.

Productivity in civilian-type industries seems to have increased slightly, notwithstanding the dilution of the labor force, the use of substitute materials, and the other handicaps under which these industries worked during the war. In the individual munitions industries, the data often show very large increases, e.g. 150 percent for airframes and 120 percent for Liberty ships, over a two-year period.

The wartime expansion of industry's productive capacity was matched by a general improvement of its financial position, as a net result of the course of sales, costs, prices, profits, and reserve accumulations during this period. Sales of the manufacturing industries, including inter-industry sales, rose from about \$58 billion in 1939 to about \$167 billion in 1944. With inter-industry sales eliminated, the resulting series, reflecting value added by industry, rose from about \$25 billion to nearly \$90 billion. The price of industry's most important cost element, an hour of labor, rose by about 50 percent between 1939 and 1944; this, after eliminating the effect of the relatively faster growth of the higher-paying metal industries. Without this adjustment the increase is about 60 percent. Of this total about 10 percent represents the effect of increased overtime premium payments, about 5 percent the occupational shifts within each industry, and about 35 percent the increases in basic hourly wage rates.

Prices of raw materials rose about 60 percent, most of the increase, as in the case of labor costs, occurring between 1940 and 1942. Other costs seem to have been moderate; the cost of at least one important element, electric power, declined substantially.

Prices of civilian-type manufactures rose by about 25 percent, excluding the fact of much quality deterioration in numerous types of finished goods. Munitions prices declined significantly throughout the period, the indices of the War and Navy departments indicating a drop of nearly 25 percent from the beginning of 1942 to the end of 1944. The profits of industry, before taxes, shot up from \$3.7 billion in 1939 to nearly \$17.2 billion in 1944—made possible primarily by the economies of large-scale production, as reflected in the lower input of labor, materials, and overhead charges per unit of output. With the increasing percentage of profits retained in the business, about \$15 billion was added to the net worth of industrial corporations, increasing its prewar level by one-third.

As already noted, the war made little change in civilian buying habits. In 1939, one-tenth of total consumer expenditures was for durable goods; by 1944, war restrictions on durable goods production had cut this by only one-third, largely because production of furniture, repair and maintenance parts, and health and safety supplies was at record levels. The increase in non-durable goods more than compensated for the drop in hard goods. Civilians had almost as much clothing up to 1945, when fabrics fell short; as much food, though not necessarily the kinds preferred; as large a volume of services, and more miscellaneous goods than before the war.

One other far-reaching change in the national economy should be mentioned. To an extent unprecedented in American history, even in previous wars, the business of the nation was guided from Washington. Every industrial plant built in the United States in the war years had to have government authorization. Scarcely a ton of steel or copper or aluminum could be fabricated without government approval. Over large areas of production the decisions as to what should be produced, who should produce it, and to whom it could be sold were government decisions. Prices and wages were controlled by government, and government helped to guide the movement of labor from plant to plant, from industry to industry, and from region to region. Fortunately, the nation never had to impose on itself the degree of regimentation to which its enemies and allies were subjected. But enforcement would have been impossible had not the people accepted with good grace the necessities of war and cooperated to make the system work, confident of prompt return to their traditional liberty of action.

U. S. Munitions Output. Effects of the December, 1944, "Battle of the Bulge" on munitions programs were portentous. Losses of material sustained in the German advance led to intensified action to increase output of critically-needed items. The decline in total munitions output which began at the end of 1943 was strongly reversed in March, 1945.

By April, the imminence of German collapse was manifest, and production began to decline. Cutbacks gained momentum as V-E Day approached and passed, and with the unexpectedly early Japanese surrender, military schedules faded away. By mid-1945, military procurement was below the rate at the time of Pearl Harbor. Total munitions production during the five years of defense preparation and war had amounted to \$186 billion, at standard munitions costs, affording a fairly close measure of actual output.

Included in this total were 86,338 tanks; 297,000 airplanes of 2,481,000,000 pounds airframe weight; 17,400,000 rifles, carbines, and sidearms, 315,000 pieces of field artillery and mortars; 4,200,000 tons of artillery shells; 41,400,000,000 rounds of small arms ammunition; 64,500 landing vessels, 6,500 other Navy ships, and 5,400 cargo ships and transports, besides similarly staggering amounts of other materiel. From July 1, 1940, through July 31, 1945, the United States merchant fleet was quadrupled. Navy firepower increased ten-fold from 1940 on, and by July, 1945, could hurl 4,500 tons of steel at an enemy in 15 seconds. Annual and cumulative production of a large number of individual munitions items showed conclusively the success of the effort to provide the American arsenal for the United Nations.

Reconversion After Victory. When V-E Day arrived, industry's preparations for reconversion already had a head start. These preparations were

gradually accelerated, with continuing WPB assistance, as resources were freed by declining military production.

The policy of the War Production Board toward the control structure for reconversion was clear. It was, first, to get rid of all orders which were no longer needed, and, second, to maintain those controls which were essential to assure an orderly transition to peacetime operation. The Controlled Materials Plan, which was open-ended after V-E Day, went out of existence at the end of September. More than 200 orders and regulations in effect at V-E Day were lifted before V-J Day, and thereafter the pace of revocation was stepped up, so that by November there were no more than a handful left.

The reconversion problem itself involved only a handful of industries, although these were highly important. Blast furnaces were turning out the same pig iron in peace as in war; cotton spindles the same yarn, and the changes in specifications of finished steel or fabric involved nothing in the nature of a wholesale conversion or reconversion. Much the same situation held in lumber products, in foods, in containers, in leather products, in construction machinery, in machine tools and plant equipment, and in most of the rest of the American economy. Reconversion meant primarily a change of customers, and the only serious problems were whether the new customers would buy as much as the old and whether costs could be held in line with prices.

To the automotive and refrigerator and other consumer durable goods industries, and in lesser degree to some of the other metal-working industries, however, the conversion to war had meant tearing apart production and assembly lines in order to tool up for production of guns, shells, aircraft engines and wing assemblies, combat vehicles, and the other paraphernalia of war. In getting back to civilian production, these industries had to reverse the process, and full reconversion really meant volume production of passenger cars, of washing machines and refrigerators and domestic sewing machines, of stoves and electric appliances and metal furniture.

The Spot Authorization Plan helped to absorb some local pools of unemployment, but it was only a limited factor in reconversion because of the tightening in materials and manpower soon after the first authorizations had been issued in the fall of 1944. By spring of 1945, however, the shortages of some types of consumer durable goods had become so great, after three years without new supplies, that WPB was allotting materials for such items as washing machines and refrigerators for the third quarter, despite the fact that V-E Day had not yet officially arrived. But while the V-E Day cutbacks were large, for the most part they affected deliveries scheduled for late summer and autumn. When Japan surrendered, munitions production was down little more than 10 per cent from the spring peak, and only a small fraction of the resources which had been devoted to war had been made available to the civilian economy.

Thus, it was not until after V-J Day, when the cutbacks began to free large amounts of resources that reconversion could pick up momentum. Meanwhile, however, many companies had been saved months in the preparatory phase by virtue of the order permitting manufacture of experimental models; the authorization for reconversion tooling, and the steps taken by WPB to get plant construction started and equipment orders scheduled. Some millions of dollars of tools necessary for resump-

tion of civilian production had already been delivered, and more were far along in production when V-J Day came.

In September, following final victory, and only four months after the end of fighting in Europe, it was too soon to measure the progress of reconversion in terms of shipments of hard goods to civilian customers. But reconversion of plants was going ahead. Inventories of war goods—goods in process, component parts, and materials unusable for civilian production were being cleared from the plants. Special-purpose war tools were being moved out and replaced. Production and assembly lines were being rearranged—and in the tool plants, the finishing touches were being put on the new equipment which would fit into those lines; equipment which could not be built overnight and which had a normal peacetime production cycle running anywhere from a few weeks for jigs and fixtures to as much as a year for the heaviest hydraulic presses. Pipelines were being filled with raw materials and components, and the components factories were going through the same process as the assembly plants.

In industries other than consumer durable goods, reconversion had been much more rapid. Some industries, of course, had to curtail rather than reconvert—aircraft, special ordnance plants, shipyards, for example. But the textile and apparel trades were already turning out civilian goods on the same spindles, looms, and sewing machines that had been making military cloth and uniforms a few short weeks before. The petroleum industry was making gasoline for civilian passenger cars instead of for B-29s. The rubber companies were building tires for civilian trucks and passenger cars in the same plants which had but recently struggled to meet military tire needs.

Termination of WPB. All functions and powers of the War Production Board established by Executive Order No. 9024 of January 16, 1942, and all agencies, officers (other than the Chairman and the other members of the War Production Board), employees, records, property, and funds of the Board, were transferred to a newly appointed Civilian Production Administration as of November 3, 1945, by order of the President. The War Production Board was thereby terminated. Clothed with the residual powers of the War Production Board, the newly created body, headed by John D. Small, Administrator, assumed the functions and duties needed for full peacetime reconversion. Mr. Small was Chief of Staff for the War Production Board when the Board ceased to function.

J. A. KRUG.

WAR REFUGEE BOARD. Terminated by Executive Order on September 15, the War Refugee Board's function ceased with the end of the war in Europe.

On Jan. 22, 1944, President Roosevelt by Executive Order set up the War Refugee Board, consisting of the Secretary of State, the Secretary of the Treasury, and the Secretary of War. They were directed to take action for the immediate rescue from the Nazis of as many as possible of the persecuted minorities of Europe—racial, religious or political—all civilian victims of enemy savagery. The Board was established in the Executive Office of the President. John W. Pehle, Assistant to the Secretary of the Treasury and Director of Foreign Funds Control, was given leave of absence to serve as Executive Director. Resigning to take charge of the Treasury's Procurement and Surplus Property Division, Mr. Pehle was succeeded on January 27 by William O'Dwyer.

As set out in the Executive Order, the Functions of the Board include development of plans and programs and the inauguration of effective measures for (a) the rescue, transportation, maintenance and relief of the victims of enemy oppression, and (b) the establishment of havens of temporary refuge for such victims. The Board was directed to cooperate with all public agencies and with established private organizations dealing with refugee problems.

With the cooperation of neutral countries, the Board participated in the rescue of thousands of refugees from the Balkans across the Black Sea to Palestine; in the rescue of many children and other refugees from Belgium, Holland, and France who were brought to Switzerland and over the Pyrenees to Spain and Portugal; in the rescue of many victims of Nazi persecution in Norway and the Baltics who found sanctuary in Sweden; and in the rescue of thousands from Hungary, Czechoslovakia, and Northern Italy to Switzerland.

Second only in importance to evacuation operations was the Board's psychological warfare work. In this area it has worked hand in hand with the Office of War Information. President Roosevelt's warning of March 24 to Germany and her satellites of the consequences of further persecutions of the Jews was given wide coverage in the press and radio around the world, particularly in German-controlled Europe.

With the termination of the Board's duties the only unsolved problem remained in Oswego, N. Y., where a refugee camp, holding nearly a thousand refugees from Italy, awaited a disposal decision. When the jurisdiction of the camp passed to the Department of the Interior, on June 6, the Board recommended that those refugees who so desired should be permitted to remain in the United States.

In his final summary report to Secretaries of State, Treasury and War, Mr. O'Dwyer stressed the need for immediate United Nations action in finding permanent homes for non-repatriable displaced peoples.

WAR RELIEF CONTROL BOARD. The President's War Relief Control Board was established by Executive Order, July 25, 1942, following recommendations of a committee appointed by the President, at the request of the Secretary of State, as to what steps should be taken to assure the efficient and economical administration of resources for war relief and welfare at home and abroad. Mr. Joseph E. Davies, former Ambassador to Russia, is Chairman, and Charles P. Taft, former Director of the Office of Wartime Economic Affairs of the Department of State, and Mr. Charles Warren, former Assistant Attorney General, are the other members, all serving without compensation.

The Executive Order transferred to the Board the administration of provisions of Section 8 of the Neutrality Act of 1939 relating to the solicitation and collection of funds and contributions for relief purposes in belligerent countries formerly vested in the Secretary of State. All matters within the jurisdiction of the Board relating to the foreign policy of the United States, however, are determined after conference with the Secretary of State.

The Board is authorized to control, in the interest of the furtherance of the war purpose, all solicitations, sales of merchandise or services, collections, receipts, and distribution of funds and contributions for (1) charities for foreign and domestic relief, rehabilitation, reconstruction and welfare arising from war-created needs in the United

States or in foreign countries; (2) refugee relief; (3) relief of the civilian population of the United States affected by enemy action; or (4) relief and welfare of the armed forces of the United States or of their dependents; "Provided, that the powers herein conferred shall apply only to activities concerned directly with war relief and welfare purposes and shall not extend to local charitable activities of a normal and usual character nor in any case to intrastate activities other than those immediately affecting the war effort."

The foregoing provisions do not apply to the American National Red Cross or to established religious bodies which are not independently carrying out any of the activities specified.

The Board is authorized to provide for the registration or licensing of persons or agencies engaged in any of the classes of relief and welfare activities as defined above. The Board also certifies eligible agencies for inclusion in the National War Fund established at its suggestion to conduct a single national appeal for all major war charities with the exception of the American Red Cross.

All registered agencies submit a periodic report to the Board including a statement of finances, the source of all monies received and expenditures for relief, administration, and other related purposes. A summary of these reports is issued quarterly.

The Board transmits to the President reports and recommendations regarding war charities and the relationship of public and private organizations, resources, and programs in these fields.

Relief Statistics. Funds contributed during the year June, 1944, through June 1945 as reported by agencies engaged in foreign relief, registered with the Board, amounted to \$90,423,120.

Contributions in kind of a dollar value of approximately \$182,798,080 were also reported as received. Of this amount approximately \$145,877,752 worth was shipped abroad before June 30, 1945.

As of June 30, 1945, total contributions and disbursements for all foreign relief since September, 1939, when agencies engaged in foreign war relief activities were first registered, are as follows:

	Receipts	Disbursements for Relief
Cash.....	\$253,802,862	\$218,736,798
Contributions in kind	224,409,787	183,863,496
Total.....	478,212,649	402,600,294

It should be understood that the figures above refer only to foreign war relief activities. (Also, the reports of a few agencies were still outstanding at the time these statistics were compiled.) The number of registered agencies engaged in such work as of June 30, 1945, was 90.

There also were 25 registered agencies engaged in domestic welfare on behalf of the Armed Forces and the Merchant Marine. Their total contributions are not available, but approximately 66 million dollars was included in the National War Fund budget for 1945 for these Services.

JOSEPH E. DAVIES

WAR RELOCATION AUTHORITY. (WRA). When on January 2, 1945, the Army revoked its wartime exclusion of persons of Japanese ancestry from the West Coast, the War Relocation Authority announced that it would close its eight relocation centers within a year of the revocation date.

Thus, with its own liquidation, WRA planned to end an epoch for a small American racial seg-

ment of 111,000 people, singled out for unprecedented mass evacuation three years earlier. At the time of revocation only about one-third of those originally evacuated had relocated throughout the country from the temporary barracks camps. This meant that WRA must do in one year double the job it had done in the two previous years.

By November 30, 1945, the last center had closed. About 45,000 evacuees went back to the West Coast from centers. The rest joined the 35,000 who had resettled earlier, principally in the East and Midwest. At the same time, at least 5,000 of these evacuees who had relocated before the ban was lifted returned during 1945 to former West Coast homes.

But returnees did not go back without meeting problems. One such problem was hostility toward their return to the West Coast, whipped up by a small but highly organized and vehement minority. By May and June when substantial numbers of evacuees were returning, opposition took the form of terrorism, particularly in California. Arson, property damage, shootings and threats occurred. Fair-minded individuals and groups condemned this violence through the press, public statements and resolutions. Eventually these publicized protests helped bring the intimidation under control.

A more widespread and far reaching obstacle was the housing shortage on the Pacific seaboard. Some Nisei servicemen's families were admitted to federal public housing projects. But by December 31, 1945, some evacuees were still living in private, non-profit hostels, originally set up as interim shelter. Others were housed in FPWA wartime trailer camps and converted Army barracks. During the last months of the year, WRA devoted most of its energies to correcting this situation. To find permanent homes for approximately 7,000 returnees still in these unsatisfactory quarters, the agency planned extension of closing dates for its field offices in critical areas.

The fifty percent of the evacuees who went back to the Coast returned, as though completing a circle, to almost the level of their pre-war status. But several times in the years following Pearl Harbor, fear and suspicion, even of the 70,000 citizen evacuees, had nearly lost them their American rights altogether. Now at the end of exclusion and of the war, evacuees standing in some localities is considerably improved. Subject of much wartime controversy, America's Japanese gained greater nation-wide understanding as a result of evacuation and relocation. This was due in part to the American public's growing awareness during 1945 of the outstanding record of 22,500 Nisei in the American armed forces, less than half of them from Hawaii.

WRA announced that it would relocate all eligible evacuees from Tule Lake, segregation center in Newell, California by February 1, 1946. During the same period, the Immigration and Naturalization Service of the Department of Justice was processing Tule Lake aliens and citizens who had requested transfer to Japan. During 1945 WRA also administered the Emergency Refugee Shelter in Fort Ontario, Oswego, N. Y. By the end of the year, no final decision had been reached regarding which of its nearly 1,000 European refugees could be returned to their homelands.

WRA's Washington office set June 30, 1945, as its liquidation date, when disposition of property and records was scheduled for completion. Centers were due to dispose of property and records within 90 days of their closing dates.

DILLON S. MYER.

WARM SPRINGS FOUNDATION. Located in Meriwether County, Georgia, the Foundation was started in 1927 by Franklin D. Roosevelt as a non-profit organization for the after-treatment of infantile paralysis.

It is financed primarily by grants from The National Foundation for Infantile Paralysis which conducts the annual March of Dimes. Basil O'Connor is president of the National Foundation and chairman of the executive committee of the Warm Springs Foundation. The center treats from 500 to 600 polio victims each year, always after the disease has passed the acute state. Dr. C. E. Irwin is chief surgeon.

The Foundation trains some 300 doctors, physiotherapists, and nurses annually in special courses for work in hospitals throughout the U.S. during polio epidemics or in after-treatment.

The institution is on Pine Mountain, with grounds covering 500 acres at an altitude of 1,000 to 1,200 feet. Treatment pools are supplied by pure spring water.

The institution has a large medical building, treatment and recreational pools, a school and occupational therapy building, recreation halls, dormitories, infirmary, dining hall, chapel, brace shop, and cottages.

Present capacity is 125 patients, including members of the armed services. They come from every state and age group. Buildings under construction will accommodate 50 more patients and additional staff.

No profit is derived from patients. About two-thirds pay none or only part of the cost of treatment. Others pay actual costs. No one is refused admission for lack of funds.

WATER SUPPLY AND PURIFICATION. Shortage of water supply and increased demand for supply were typical conditions in many cities during 1945, the increased demand and consumption being especially serious where war industries and camps had suddenly increased the population. In the early part of the war there was a movement for interconnection of water systems of neighboring cities as precaution against damage by enemy action or sabotage, but as the tide of war ebbed farther from our shores this factor was eliminated.

In Ohio, several cities suffered severe shortage due to drought, inadequate storage and a long spell of cold weather. The State Water Supply Board recommended drastic regulation to stop contamination of ground water by oil and gas well drilling, and to stop the use of old wells for disposal of sewage. Florida had trouble with encroachment of salt water, even to ten miles inland, due in part to the lowering of the ground water level by drainage of swampy lands. Nevada, Colorado, Arizona and other States, in cooperation with Federal authorities, are to study the underground resources beneath the arid areas as means for irrigation.

Chicago put in partial operation on Sept. 20 its great water treatment plant, long delayed under war conditions, but to be the largest in the world when fully completed. This \$24,000,000 plant, with lake intake, treatment works, filters, pumping station and distribution tunnels, is to serve the South Side district (population 1,350,000), and is located on a solid fill or pier extending into Lake Michigan. At present only chemical treatment (chlorination) is applied, removing 70 per cent of impurities; filtration will follow with the completion of the rapid-sand filters in 1948. A similar project to serve the North Side district has been

approved by the city council. Cleveland, Ohio, has a program of enlargement and improvement and is studying the requirements for a "Greater Cleveland." Columbus is seeking an additional supply from surface or underground sources, and laid a pipeline to the Scioto River as an emergency measure.

As an example of war conditions, Corpus Christi, Texas, had its population increased 253 per cent by industries and a navy base, with resultant increase of 675 per cent in water consumption. For comparable conditions at San Diego, Calif., a 72-mile aqueduct is being built from the Colorado River aqueduct of the Metropolitan Water District of Southern California to the San Vicente reservoir, from which new pipe lines will extend 18 miles to the city. For this project, the city and several other communities organized the San Diego County Water Authority. At Yakima, Wash., the court upheld the city in charging higher water rates for outside consumers, and in its right to discontinue supplying such consumers.

In water treatment, coagulants prepared from sodium silicate are being used for water softening and removal of iron in St. Louis, Chicago and other cities. A new electrolytic softening process is being used by the Metropolitan Water District of Southern California for treatment of the Colorado River water. There is also a new de-ionization process to produce chemically pure water of any desired degree of softness. The largest municipal water softening plant is said to be at Ventura, Calif., supplying a population of 2 million in several communities by a combination of lime, soda-ash and zeolite. In 1945, the U.S. had 665 water softening plants, supplying 900 communities. Domestic plants numbered 450,000. The use of chlorine dioxide for removal of objectionable tastes and odors is expected to increase rapidly, since the war demand for sodium chloride is now reduced.

Great efforts have been made to provide good drinking water for men at the fighting fronts. The apparatus ranges from a 7-lb. outfit carried as a man's equipment to one equivalent to a city supply. The U. S. Navy also has developed emergency and permanent plants for water supply and purification in the South Pacific islands, including Guam, Iwo Jima and Okinawa. A comparatively recent discovery is that fluorine in water tends to cause decay of teeth. Treated potable water has been found to cause corrosion in plumbing; the remedy may be to use glass-lined metal parts or to give such water a special treatment. Changes in filtration and sedimentation may come with the use of high-frequency sound waves by electronic devices. When small iron pipe was unobtainable in China, the U. S. Engineers used bamboo pipe in lengths of 15 to 20 ft. for a 600-ft. distribution line.

An interesting event in the history of American water supply was the purchase in 1945 by the city of Paterson, New Jersey, of the Passaic River water rights owned by the "Society for Establishing Useful Manufactures," organized in 1791. Long litigation over State rights in the flow of the North Platte River was ended in October by a decree of the U. S. Supreme Court, granting to Nebraska the major share and restricting the storage rights of Colorado and Wyoming. The new treaty with Mexico concerning the use of the Rio Grande and Colorado Rivers, which went into effect in November, ends some 20 years of controversy.

In Puerto Rico, a bill passed by the legislature and signed by the Governor creates the Aqueduct and Sewerage Service Department to carry out a

6-year program for new water supply and sewerage works. Among the activities of the Institute of Inter-American Affairs is the construction of rural water supply plants along the Inter-American Highway through Central America. The Provincial Government of Quebec has created a Department of Hydraulic Resources, having control over all developments for water supply and hydro-electric power. In England the continued low record of rainfall has led to serious conditions, which are aggravated to a dangerous extent by stream pollution with sewage and wastes. The Ministry of Health has been asked to start control of this hazard. For the supply of London, the completion of three reservoirs, halted by the war, is planned by the Metropolitan Board of Works, as the reconstruction of bombed areas and the introduction of modern sanitary equipment will lead to increased demands for water. See **AQUEDUCTS, DAMS, SANITATION.**

E. E. RUSSELL TRATMAN.

WATERWAYS, Inland. Inland waterways of the United States have not had any great development in 1945. However, with the dedication of the Kentucky dam and lock on the Tennessee River, by the President on October 10, a navigable channel with minimum depth of 9 ft. and width of 300 ft. was extended from the Ohio to Knoxville, Tenn., 650 miles. This dam, 23 miles from the Ohio, is one item in the Tennessee Valley Authority program for navigation, flood control, and water power. Development and operation of inland navigation are in the hands of three authorities. The channels, turning basins, berths and other navigation facilities are provided and maintained by the War Department (Corps of Engineers, U. S. Army). The wharves, piers, landing stages, warehouses and other commercial facilities are provided mainly by local or municipal authorities, and leased usually on a tonnage basis. The tow boats, tugs, barges and other craft are provided by the operating concerns (federal government and private):

The Louisiana State Board of Public Works is to build a new lock in the west bank of the Mississippi at Empire, La., 65 miles below New Orleans, to connect with the Doulhut Canal and thus with the Gulf coastal waterway west of the river. The lock will be 200 ft. long and 40 ft. wide, with 10 ft. of water on the sills. The Board also proposes a navigable canal along the Red River. A project for a ship canal across New Jersey to the Delaware River is opposed by the State Highway Planning Bureau on account of its intersecting numerous main highways, with consequent interference with passenger and freight traffic. An alternative project is an off-shore barrier or break-water extending from Sandy Hook, 30 miles south and about a mile off-shore, with water 50 ft. deep. The cost would be much less than for the canal.

A proposed barge canal across Florida, with 12 ft. of water and a bottom width of 150 ft., is estimated by the War Department to cost \$55,000,000. Surveys are also being made for widening and deepening the Florida section of the Gulf inter-coastal waterway. In Connecticut, a State Port Survey Commission is making a survey of all navigable waterways in the State.

Modernizing of the Hennepin Canal, built in 1907 to connect the Illinois River with the Mississippi at Rock Island, Ill., would include deepening to 9 ft. of water and reducing the number of locks from thirty-two to six. Widening and deepening of the Chicago Drainage Canal is also proposed. Problems of legality are delaying the transfer of

the old and abandoned Illinois-Michigan Canal from the Federal government to the State of Illinois, for conversion into an expressway. Its route is from Chicago to Peru, Ill., 92 miles. Another project is for a canal from Little Rock, Ark., to the White River and the Mississippi, shortening by 100 miles the distance from Little Rock to Memphis.

Canalization of the Trinity River, in Texas, is being studied by the War Department, which has also approved a 45-mile ship canal from San Francisco Bay to Sacramento, shortening the river route by 15 miles. It is to be 200 to 300 ft. wide, with 30 ft. of water, and will have one lock, at the San Francisco end. A revived project in the State of Washington is for a canal from the Columbia River to Puget Sound and the inland or coastal waterway to Alaska. Old but recurring projects are for canals to connect Lake Superior with Lake Michigan, Lake Michigan with Lake Erie, and Lake Erie with the Ohio River. The first, with a length of only 40 miles, from Au Train to Escanaba, would by-pass the route through the Sault Sainte Marie canal and locks and shorten that route by 360 miles.

Power barges with oil-electric outboard drive are in operation on the New York State canals and the Mississippi, and also on the Rhine. Ice-breaking vessels are being used more extensively to prolong open navigation on the Upper Mississippi and at Sault Sainte Marie and the Straits of Mackinac. The Inland Waterways Corporation (U. S. Department of Commerce), operating 3,000 miles on the Mississippi, Illinois, Missouri, and Warrior rivers, has a fleet of steel freight barges and tank barges and also tug boats of 700 h.p. and 1,320 h.p. These tugs and tow boats are displacing the old and spectacular side-wheel and stern-wheel river steamers. Welded steel barges are being introduced by the Mississippi Valley Barge Line Co.

The long discussed St. Lawrence River project for a great power dam and a lock opening navigation between the Great Lakes and the Atlantic, in cooperation with Canada, is very much alive but still highly controversial as to merits and costs. In October, President Truman urged Congress to ratify the agreement drafted in 1941, but this agreement is considered out of date and unsatisfactory. An American proposition for postwar Europe is free and unregulated navigation of the network of canals and rivers, eliminating the numerous customs offices and other obstacles at national boundaries. This was planned in August at a conference, in London. In England nearly 1,000 power-driven craft are operated on the various canals, and the traffic in 1945 amounted to 12,000,000 tons, exclusive of 7,500,000 tons on the Manchester Ship Canal.

The Albert Canal, in Belgium, futile as a guard against invasion from Germany, was cleared for navigation by the U. S. Engineers, who removed some 200 bridges blown up by the retreating Germans. In November, the International Commission for Control of Rhine Navigation reported that the channel was open from the sea to Basle, Switzerland, all wrecked bridges being removed, and temporary bridges removed or raised for clearance. The Swedish State Railways have put in service an oil-engined, twin-screw car-ferry for postwar service between Malmo, Sweden, and Copenhagen, Denmark, on which route the annual traffic averages 250,000 passengers and 100,000 tons of freight. An interesting Far East project is for a 110-mile ship canal across the Kra peninsula of Siam, to shorten by some 2,000 miles the sea route

between ports of India, China and Japan. See PORTS AND HARBORS.

E. E. RUSSELL TRATMAN.

WAVES. The women's auxiliary of the U.S. Navy. For its organization, see YEAR BOOK for 1942, p. 757. There were 86,000 women serving in the Waves during 1945. Enlistments were discontinued after Japan's surrender, Sept. 1, 1945.

WEATHER BUREAU. A Bureau of the U.S. Department of Commerce, originally organized under the Department of Agriculture in 1890. It operates the basic national (synoptic) system of meteorological observations for the United States and prepares forecasts, summaries, etc. See METEOROLOGY. Chief in 1945: Francis W. Reichelderfer.

WEATHER SYMBOLS. Weather reports are transmitted by teletype by the U.S. Department of Commerce from an intricate network of sub-stations throughout the country. All reports follow a standardized order showing, ceiling, sky conditions, visibility, weather, obstructions to vision, temperature, dew-point, wind direction, velocity, character of gusts, barometric pressure, field conditions and remarks.

Ceiling measurements are obtained by releasing hydrogen-inflated balloons for a pre-determined rise per minute. In the weather charts, ceilings are given in hundreds of feet, either measured or estimated.

In sky condition symbols, plus and minus signs are used, respectively, to indicate dark and thin clouds. Used with elements and obstructions to vision, the plus and minus signs denote intensity. Direction of wind is indicated by arrows. Temperature and dew-point are reported in degrees Fahrenheit. Wind velocity is reported in miles per hour.

Pressure tendency is based on net pressure change, in hundredths of an inch, during the three hours previous to the time of observation.

Invariably, meteorologists use Admiral Beaufort's scale of wind forces, symbolized in arrows which fly with the wind and touch the edge of the circle showing the observation station on the weather map.

The accompanying symbols are those sometimes used.

WHITE HOUSE OFFICE. A division of the Executive Office of the President, which serves the President in the performance of detailed activities incident to his office. The officials include three Secretaries, Matthew J. Connelly, Charles G. Ross, William D. Hassett; Special Counsel, S. I. Rosenman; three Administrative Assistants (personal aides), David K. Niles, Raymond R. Zimmerman, and Richmond B. Keech; Special Assistant, John R. Steelman; Special Executive Assistant, George J. Schoeneman; Social Secretary, Reathel M. Odum; Executive Clerk, William J. Hopkins.

WOMEN'S BUREAU. A bureau in the U. S. Department of Labor created by Congress in 1920 to "formulate standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment."

As in the immediately preceding years, the Women's Bureau was concerned in 1945 with the most effective utilization of woman power in the nation's war production machine, but even before V-E and V-J Days it had of necessity directed many of its facilities toward the end of furnishing factual and reliable information on which postwar

policies for women workers could be built. An example of this is the current laundry survey. Planned before the coming of peace, this study is expected to yield concrete data which will result in the improvement of wages and general working conditions in an industry in which large numbers of dislocated women war workers will find their postwar employment. Early in the year, the Bureau completed a major field survey in which 13,000 women workers in 11 war-congested areas of the country were interviewed as to their postwar plans, wartime occupations, preferences as to peacetime jobs, and economic responsibilities. Other field surveys finished and on which published reports will be forthcoming dealt with women's jobs in railroad yards; the work of women in the traffic, commercial, and accounting departments of the telephone industry; and the effect on women of wartime alterations in hours of work.

Surveys on which reports were printed during the year were those relating to the employment of women in army supply depots, women's wartime jobs in cane-sugar refineries, and women's emergency farm service on the Pacific Coast.

The special study of union contracts in war plants in the Midwest to ascertain to what extent women members received equal treatment with men as to rate for the job and seniority rights was completed, and leaflets on the subject of rate for the job, seniority principles as they affect union women, as well as on maternity leave in union contracts, were published. A fourth leaflet in the union series, "Unemployment Compensation: How It Works for Working Women," also was printed.

In connection with its program of union cooperation, the Bureau prepared and submitted to the National War Labor Board a detailed brief in support of union request that discrimination against married women workers be abolished.

The consultative and advisory services the Bureau offers to many different organizations and agencies concerned with women workers constituted an extensive part of the Bureau's program during the entire year. Two important conferences were convened for the purpose of developing coordinated programs to safeguard the interests of women workers during the readjustment and post-war periods. At the first, which was attended by women representatives of 25 key national organizations with large woman membership, a "Reconversion Blueprint for Women" was adopted. At the second, in which 31 women labor leaders representing 23 international unions participated, a similar program was agreed upon.

Helping to implement the work of the Bureau headquarters staff were its regional representatives who are stationed in Boston, New York, Philadelphia, Chicago, Detroit, St. Louis, and San Francisco.

Throughout the year the Bureau gave technical assistance to State labor departments concerning standards for labor legislation and minimum wage orders affecting women workers. It was particularly active in advising on matters concerning coverage and standards that would advance both the war and peace effort through the stabilization of women's employment. The Bureau's work in support of the principle of "equal pay," or rate for the job, was intensified, and it acted as a consultant to both the States and Federal government in the drafting of proposed equal pay legislation. To support the electrical workers' union in its stand on equal pay for women, the Bureau submitted a statement to the National War Labor Board pointing out that historically lower pay

standards in jobs traditionally employing women are a serious violation of the principle of equal pay for women.

The Bureau also has continued its research on the status of women under political and civil laws. Bulletins analyzing State labor laws for women were printed and a report evaluating wartime changes in such legislation and incorporating recommendations was completed.

The report being prepared in conjunction with the Social Security Board on the possibility of extending old-age and survivor's insurance to household employees is nearing completion. The Bureau's section of this joint project deals with the need of these workers for such a measure, while that of the Social Security Board presents technical details and administrative methods involved in such coverage.

The Bureau's publications of particular interest to professional and semi-professional women were its series on occupations of women in the medical and other health services. The studies discuss the prewar situation, wartime changes, and future outlook for women in such fields as medicine, dentistry, professional nursing, physical and occupational therapy. They report also on women medical laboratory technicians, X-ray technicians, and medical record librarians.

The bulletin, "Negro Women War Workers," in which material currently available was assembled and analyzed to show the contributions of Negro women to the war effort, was published early in the year.

The division of public information, to which newspapers, magazines, press associations, and special writers turn for authoritative information on matters pertaining to women workers, furnished much factual and interpretative data to such agencies and individuals regarding various aspects of women's employment. Bureau staff members also wrote a number of articles, upon request, for newspapers, magazines, and publications of women's organizations and unions. The division assembled photograph collections for conferences and exhibits of various organizations.

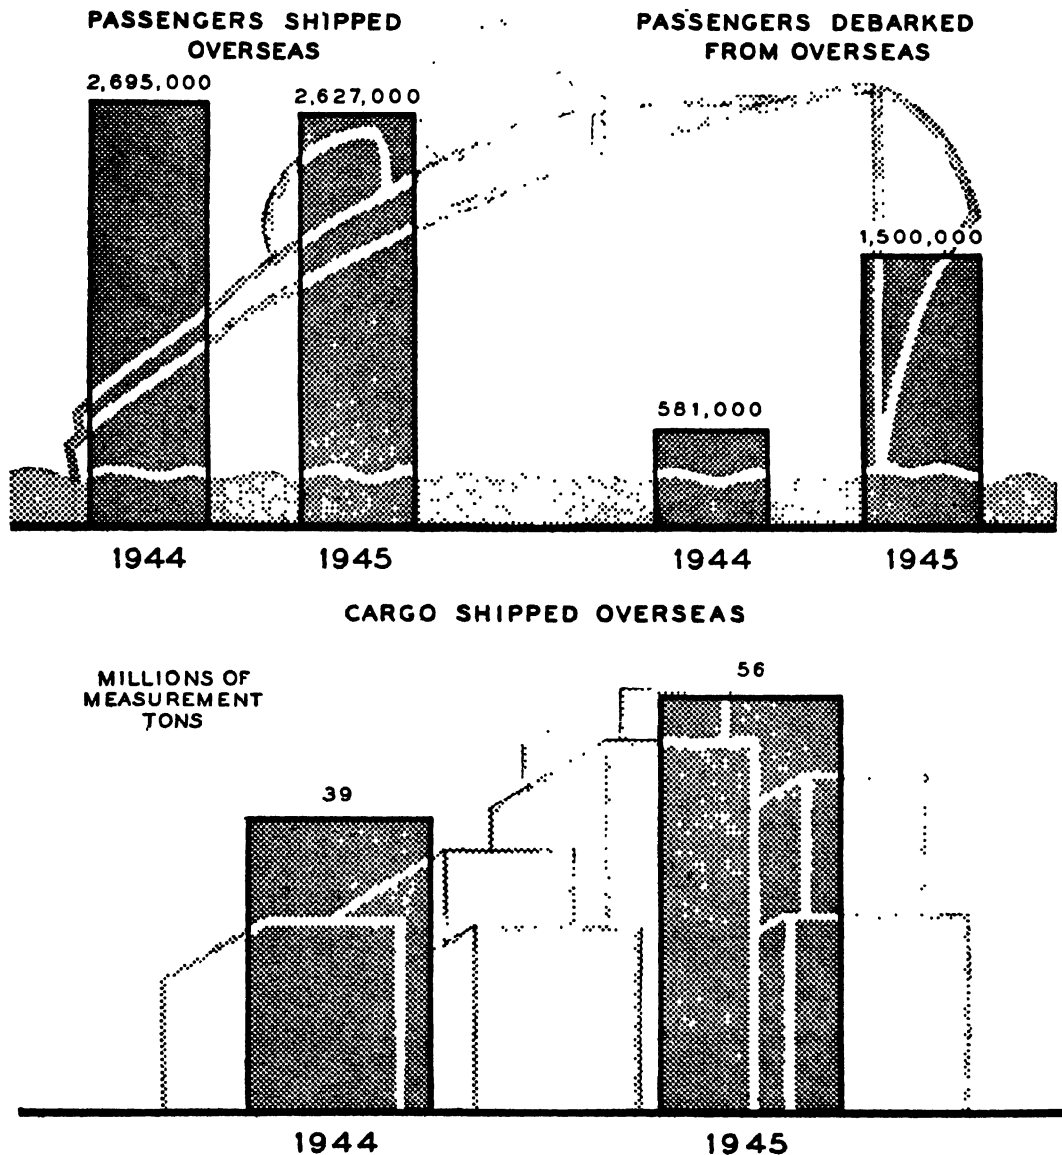

The program of cooperation with other American Republics was continued in 1945. Important among activities in this direction were the series of lectures delivered by the Bureau's Chief of Inter-American Affairs at the Universidad del Trabajo in Montevideo, Uruguay. The lectures concerned labor legislation and other matters affecting women of the United States. While in South America, the Bureau representative also conferred with labor department officials in Uruguay, Peru, and Chile, and in the latter country served as a member of the United States delegation to the first Pan-American Conference on Social Work in Santiago in September.

FRIEDA S. MILLER.

WORK PROJECTS ADMINISTRATION (WPA). A Government agency under the jurisdiction of the Federal Works Agency, now liquidated.

WORLD WAR. Battle of the Atlantic. The struggle between the Allied Nations and Germany for control of the Atlantic, without which the vast armies in Europe, the Mediterranean, and the Middle East could not have been transported and supplied, continued until the end of the war. Only three weeks before the formal capitulation of Germany, a strong group of Nazi submarines was intercepted in mid-Atlantic by a force of carriers and destroyer escorts from the U.S. Atlantic Fleet which sank

(From the Report, 1945, of General Brehon Somervell, Commanding General Army Services Forces)

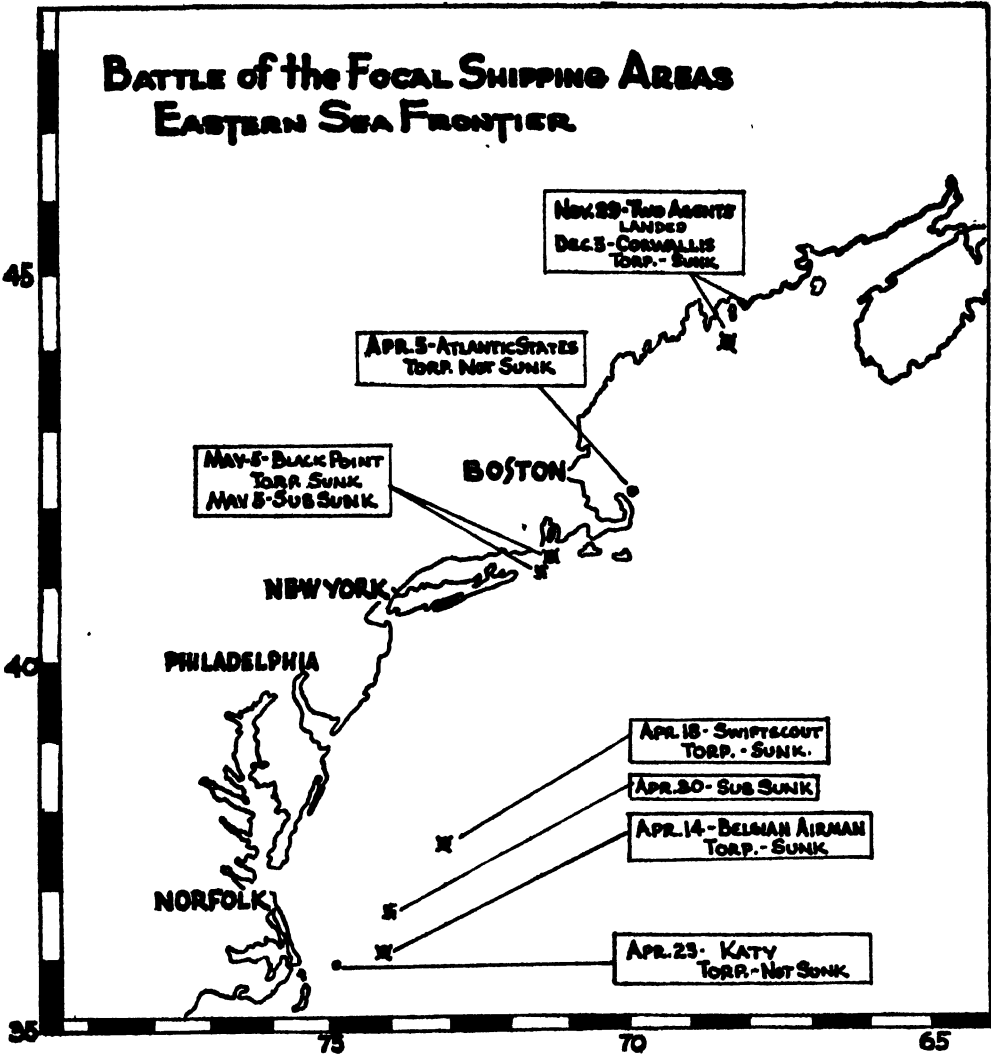

five of the U-Boats. Also, shortly before the surrender, German submarine activity increased along the U. S. East Coast for the first time in more than a year. Just 24 hours before the end a German U-Boat was sunk off Block Island; in April one was sunk south of Nova Scotia; and there was a probable kill off Cape Hatteras only two weeks prior to the surrender. The Germans were successful in torpedoing five merchant vessels off the East Coast in the last three weeks of the war.

In renewing their Atlantic submarine drive the Germans showed the importance they placed upon interfering with the U.S. war effort, and her aid to the other United Nations, at its source.

In the last war, Allied cargo chiefly consisted of Quartermaster supplies; this time Ordnance sup-

plies, including all types of ammunition and weapons, amounted to 34 percent, and QMC and Engineers had 28 and 10 percent of the total respectively. Transportation, Signal, and Air Corps equipment consisted of three percent each, and Chemical Warfare Service one and one-half percent. Both Medical Corps and Army Exchange Service supplies were each less than one percent of the total. Twelve percent of all cargo was comprised of vehicles, and three percent of gasoline and oil.

The Germans had in production at the close of the war a new type of submarine capable of making eighteen knots submerged and a torpedo whose course and depth was controlled by a fine wire attachment. Admiral Jonas H. Ingram, U. S. Navy, Commander in Chief, U. S. Atlantic Fleet, esti-

POINTS OF ACTION IN THE CRUCIAL BATTLE OF THE ATLANTIC

mates that the German U-Boat Fleet reached its peak strength of 450 on March 1, 1945.

Combatting this menace was the United States Navy's Atlantic Fleet, Admiral Jonas H. Ingram, U. S. Navy, Commander in Chief, and units of the British, Canadian, and European navies working under British control.

Fleet Admiral Ernest J. King, U. S. Navy, Commander in Chief U. S. Fleet and Chief of Naval Operations, in his final report to the Secretary of the Navy, gave the following statistics on the Battle of the Atlantic:

In presenting these statistics Admiral King said that the following are clearly the chief features of the Battle of the Atlantic: "(a) Until the closing months of 1942 the German submarines were continuing to reduce the available total of Allied tonnage; (b) Anti-submarine operations resulted in the sinking of an average of 12 German submarines per month after Jan. 1, 1943, or a total of 480 in the two years 1943-44; (c) American shipyards alone produced an average of a million tons per month of new merchant ships after Jan. 1, 1943, or a total of 24,000,000 tons in two years."

Year	German Submarines Sunk	Allied Shipping Sunk	New Construction			Net Gains or Losses
	(Number)	(In thousands of tons)	U. S.	British	Total (In thousands of tons)

Mediterranean Theater. The Italian front, which forced the first surrender of an Axis member, also brought the first surrender of the German Wehrmacht. The fighting was under the most arduous conditions; except near the very end all gains were against most bitter opposition. Opposing ground forces were very nearly equal, but Allied air power had early won supremacy and was able not only to harass the German troops and their supply lines but also to reach out and pound heavily at strategic oil and rail centers in Austria and southern Germany. The Allied Mediterranean Command was under Field Marshal Sir Harold R. L. G. Alexander, British Army, under whom Lt. Gen. Mark W. Clark, U. S. Army, commanded the 15th Army Group, as the Allied Forces in Italy were designated.

The importance of the Italian campaign lay not

the front was extended to the Reno River on the north. The Canadian troops drove down the Reno River to the neck of land between Lake Comacchio and the Adriatic Sea. Near Faenza, in spite of strong efforts to dislodge them, some German elements remained east of the Senio.

In the Fifth Army sector the Japanese-American 442nd Infantry Regiment spearheaded the fighting around Massa, while the newly arrived 10th U. S. Mountain Division proved the worth of its special training in the fighting around Mount Belvedere.

Aside from patrol activities and raids, the front quieted down considerably until the opening of the Allied spring drive. In the air, however, activity kept apace in spite of bad weather and flying conditions. The Brenner Pass was kept under constant harassment (at one time it was closed to through traffic for 51 consecutive days), while

THE LINE IN ITALY ON APR. 18

(N. Y. Times)

alone in the fact that it kept from Germany thirty divisions she could have employed profitably on either the Western or Eastern Fronts, but also because north Italy and the Po valley contributed considerable of value to the German war effort. The Po valley, ultimate objective of the campaign, is the industrial center and the greatest agricultural region in Italy. Furthermore, through her position in north Italy Germany was able to keep up intermittent contacts with Franco Spain.

The Fifth Army had just regained Barga from which it had been driven on December 26, but had failed to recapture Galliciano which had been lost at the same time. Also failing was an effort to land in the enemy's rear by an amphibious attack near Massa.

The Eighth Army on January 3 opened a new drive in the Ravenna sector against much opposition. The next day the attack was extended southwestward to both sides of Faenza, while on the 5th

other communications and industrial centers beyond the Alps, as far north as Berlin, were pounded. Meanwhile in February the Combined Chiefs of Staff directed that five British and Canadian Divisions be shifted to the European Theater, later modifying this to require the transfer of three to the Western Front, one to the Eastern Mediterranean, and the retention of the other in Italy.

Field Marshal Albert Kesselring, long commander of German forces in Italy, was withdrawn from the Italian front in March and sent to succeed Field Marshal von Rundstedt as Supreme Commander in the West. Replacing Kesselring as Supreme Commander in Italy was Colonel General Heinrich von Vietinghoff-Scheel.

As the spring drive opened the Fifth Army (Lt. Gen. Lucian K. Truscott, Jr., U.S. Army, commanding) held the western two-thirds of the line from a point in the Apennines southeast of Bologna through the mountains to the Ligurian Sea

a few miles south of Massa. The Eighth Army (Lt. Gen. Richard L. McCreery, British Army, Commanding) held the western sector from the junction with the Fifth Army along the Senio River to the Adriatic Sea.

The drive opened on April 9, but preceding it were two preliminary operations. The Eighth Army established a base on a sand spit separating Lake Comacchio from the sea. April 6 it began to clear the area between the Reno River and Lake Comacchio. Meanwhile, on the west coast, the Fifth Army began a diversionary attack in the direction of Massa, gaining some ground north of Viareggio.

The main drive was opened with an attack by the Eighth Army across the Senio River west of Ravenna. Preceding the attacking ground troops, the Fifteenth Army Air Force "carpet-bombed," dropping 1,692 tons of fragmentation bombs, after which flame-throwing tanks seared the opposing banks of the Senio. The river crossing was completed during the night, following which the Eighth directed the force of its attack towards Budrio. Throughout these operations the German Tenth Army offered determined opposition.

In the west the Fifth Army opened its main effort on the 14th, following a vigorous air and artillery preparation. Massa, 17 miles southeast of the port of Spezia, was taken as was Vergato toward the center of the line. On April 20 the Fifth Army, coming out of the Apennines, debouched into the plains of the Po, and severed the Bologna-Modena Road west of Bologna. On April 21 Fifth Army troops entered Bologna from the West and South while Polish forces from the Eighth Army came in from the East.

With the fall of Bologna, the Fifth Army out of the mountains and maneuvering with lightning speed over the flat-lands of the Po Valley, and the Eighth Army having made a daring break-through at the strongly defended gap between Argenta and the Comacchio Lagoon, the position of the Germans was desperate and their retreat began to show signs of disorganization.

Losing no time, Fifth Army elements moved rapidly up the highway northwest to Piacenza while others went north to establish a bridgehead near Ostiglia. The Eighth Army crossed the Po in force on the 25th and, with the Fifth Army troops at Ostiglia, closed the pincers at Finale.

In the west, the 92nd Infantry Division of the Fifth Army reached Genoa. The naval base at La Spezia had fallen the day before.

An armored column was rushed to Como and the Swiss border to prevent the withdrawal of the German forces in the Maritime Alps.

On April 30 from the headquarters of General Clark's Fifteenth Army Group the following historic announcement was made:

"Troops of the Fifteenth Army Group have so smashed German armies in Italy that they have been virtually eliminated as a military force. This destruction has all been accomplished in an offensive which is now twenty-two days old for the Eighth Army and fifteen days old for the major part of the Fifth Army.

"Twenty-five German divisions, some of the best in Germany, have been torn to pieces and can no longer effectively resist our armies. Thousands of vehicles and tremendous quantities of arms and equipment and over 120,000 prisoners have been captured and many more are being corraled.

"The military power of Germany in Italy has practically ceased, even though scattered fighting may continue as remnants of German armies are mopped up."

The U. S. Fifth Army and the Seventh (on the Western front) made contact in the Brenner Pass. Other elements of the Fifth pressed beyond Savona and joined with the French near Noli on the Italian Riviera. Completing the Allied chain, the Eighth Army, moving on Trieste, joined Yugoslav partisan forces at Monfalcone.

Any hopes the Germans may have had that a conditional surrender could be negotiated (they had sought terms as early as February, 1945), now being destroyed, German agents in Switzerland sent word of the readiness of the high command to discuss capitulation. An Allied plane brought representatives to Field Marshal Alexander's headquarters at Caserta where on April 29 an "Act of Surrender" was signed by emissaries of the Waffen SS and the German Wehrmacht capitulating all forces of the German Army Group Southwest in Italy and Yugoslavia.

Under this surrender hostilities ceased at high noon, Greenwich time, May 2, 1945.

Previously, Italian partisans had captured Benito Mussolini and his mistress, Clara Petacci. With Achille Starace, former leader of the Blackshirt Militia, he was summarily tried as a traitor. On April 28 they were executed by a firing squad. Their bodies were taken to Milan and hung by the heels in the Piazza Loreto.

In announcing, April 24, that the Canadian First Army Corps had been moved from Field Marshal Alexander's command in Italy to join the Canadian First Army in northwest Europe, the British Information Services stated that "so far as is known" the following field formations were in action in Italy:

1. British	1st Armored Division
British	6th Armored Division
South African	6th Armored Division
British	1st Infantry Division
British	4th Infantry Division
British	5th Infantry Division
British	46th Infantry Division
British	56th Infantry Division
British	78th Infantry Division
New Zealand	2nd Infantry Division
Indian	4th Infantry Division
Indian	8th Infantry Division
Indian	10th Infantry Division

"In addition to these divisions there are three brigades: the Guards Brigade, the Irish Brigade and the 23rd British Armored Brigade. These in strength amount to one division approximately. The total formations mentioned above amount to 14 divisions, or possibly 13, as it has been reported unofficially that the 4th Indian Division is now serving in the eastern Mediterranean."

2. United States	1st Armored Division
United States	34th Infantry Division
United States	85th Infantry Division
United States	88th Infantry Division
United States	422nd Infantry Division
United States	91st Infantry Division

"Also one Mountain Division (since identified as the U. S. 10th Mountain Division) is reported unofficially to be in action in the Apennines. These amount to a total of seven Divisions."

8. Polish	2 Infantry Divisions
4. Brazilian	1 Infantry Division

"In addition French and Greek and a considerable Italian force have been fighting for the Allies.

"The British Eighth Army is composed of divisions from the British Isles, British Dominions, Poland and India. British, Dominion, and Indian Divisions have also been serving with the United States Fifth Army."

During the drive in April, the Mediterranean Al-

XV Fighter Command	Brig. Gen. D. C. Strother	Italy.

the Mediterranean Allied Tactical Air Force and the Strategic Air Force combined to bomb targets in advance of and in cooperation with the First and Eighth Armies.

When Germany surrendered, official statistics for operations in April were made public showing that the Mediterranean Tactical Air Force flew 38,787 sorties, the largest number since May, 1944, and dropped 21,613 tons of bombs. A total of 4,201 armored vehicles and motor transport was destroyed. A total of 400 armored vehicles and motor transport was damaged. Seventy-four bridges were destroyed, 142 damaged. A total of 1,644 horse-drawn and ox-drawn vehicles was destroyed and 2,212 damaged. Twenty-three locomotives were destroyed and 264 damaged. Six hundred and seventy-five rail cars were destroyed and 2,057 damaged.

The 12th AAF flew 17,565 sorties and dropped more than 13,000 tons of bombs.

The 15th AAF's bombers in April flew 12,962 sorties, dropping 27,432 tons of bombs. The 15th's fighters flew 9,849 sorties and dropped 1,510 tons of bombs.

RAF strategic bombers played a big part in the combined land-air victory on the night of April 9, bombing German troop concentrations only 2,000 yards ahead of the 8th Army line in the closest night attack ever made by heavy bombers.

At the beginning of the month, the Strategic Air Force bombed enemy rail communications in Northern Italy, Austria, Yugoslavia and Southern Germany. In the first few days the bombers attacked rail targets in front of the Russian armies advancing on Vienna.

On April 15, the 15th made history by putting 93 percent of its operational aircraft into the air to bomb targets on the 5th Army front south of Bologna, in an aerial prelude to the advances of the ground forces. Approximately 1,200 bombers, the greatest number of heavies ever dispatched in the Mediterranean Theater of Operations, followed intricate ground markings to bomb enemy concentrations with excellent results.

The Balkan Air Force, flying some 4,000 offensive sorties, softened up defenses preparatory to the ground forces clearing the Germans from the Dalmatian islands of Pag, Rab, Krk, Lussi and Cherso.

Operations of Coastal Air Force also were dovetailed into the general pattern, and were directed against shipping on the east and west coasts of Italy as well as in cooperation with land offensives in Italy and Yugoslavia.

The Order of Battle, Mediterranean Theater of

Casualty figures for other nations had not yet been broken down by areas, but United States losses were reported for the Mediterranean Theater of Operations as follows:

U. S. Army—41,846 killed, 106,886 wounded, 1,828 missing, 470 prisoners, total 151,030 (reported October 31, 1945).

U. S. Navy—1,930 dead, 78 missing, 1,689 wounded, total 8,697 (reported May 8, 1945).

U. S. Marine Corps—2 dead (reported May 8, 1945).

Eastern European Front. The battle line between Germany and her satellite nations on one side and the Soviet Union on the other not only was the oldest land battle line in the war but also by far the longest and with the most troops engaged on both sides.

The Red Army employed on this great front eight armies deployed from north to south as follows (while the term "armies" is generally used in this country in designating these huge military organizations, which the Russians themselves call "fronts," actually they more closely resemble "army groups"):

The First Baltic Army (Colonel General Ivan C. Bagramian) opposite the beachhead in Latvia which was held by 30 divisions of the Sixteenth and Eighteenth German Armies.

The Third White Russian Army, under Col. Gen. Ivan D. Chernyakovsky, east of East Prussia.

The Second White Russian Army, commanded by Marshal Konstantin K. Rokossovsky, and comprising 25 infantry and 5 armored divisions, southeast of Danzig.

The First White Russian Army, under Marshal Gregory K. Zhukov, with about 40 infantry and 5 armored divisions, advancing westward toward Berlin from the Warsaw area.

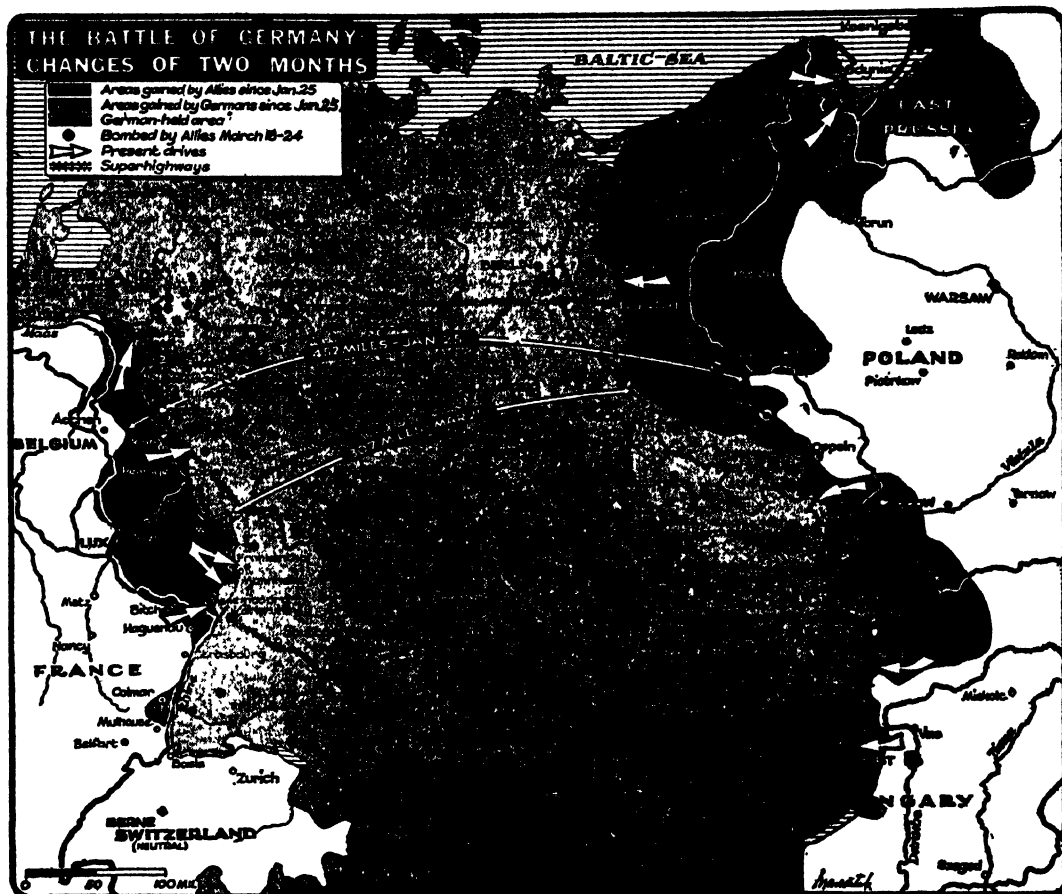

The First Ukrainian Army, commanded by Marshal Ivan S. Konev, north and west of Cracow, with 90 infantry and 15 armored divisions.

The Fourth Ukrainian Army, commanded by Marshal Ivan Y. Petrov, in the Carpathians in the region of the Wistoka River.

The Second Ukrainian Army, under Marshal Rodio Y. Malinovsky, east of the Danube between Budapest and Kassa.

The Third Ukrainian Army (General Fedor Tolbukhin) west of the Danube and north of Drava.

The German strength on this front was estimated at 200 divisions with a total of nearly 2,000,000 men. No official reports or estimates have been made public as to the strength of the Red Army but it is generally considered to have been appreciably larger and better equipped. German estimates placed Russian line strength at more than 340 divisions.

TWO MONTHS' ADVANCE INTO GERMANY, JAN. 25 TO MAR. 24

(N. Y. Times)

The great offensive of the Red Army north of the Carpathians began January 12 with its main power thrust westward through Poland directly toward Berlin. The Russians were careful, however, not to let this thrust advance too far without also moving forward her armies along the Baltic and in Czechoslovakia, Hungary, and Austria.

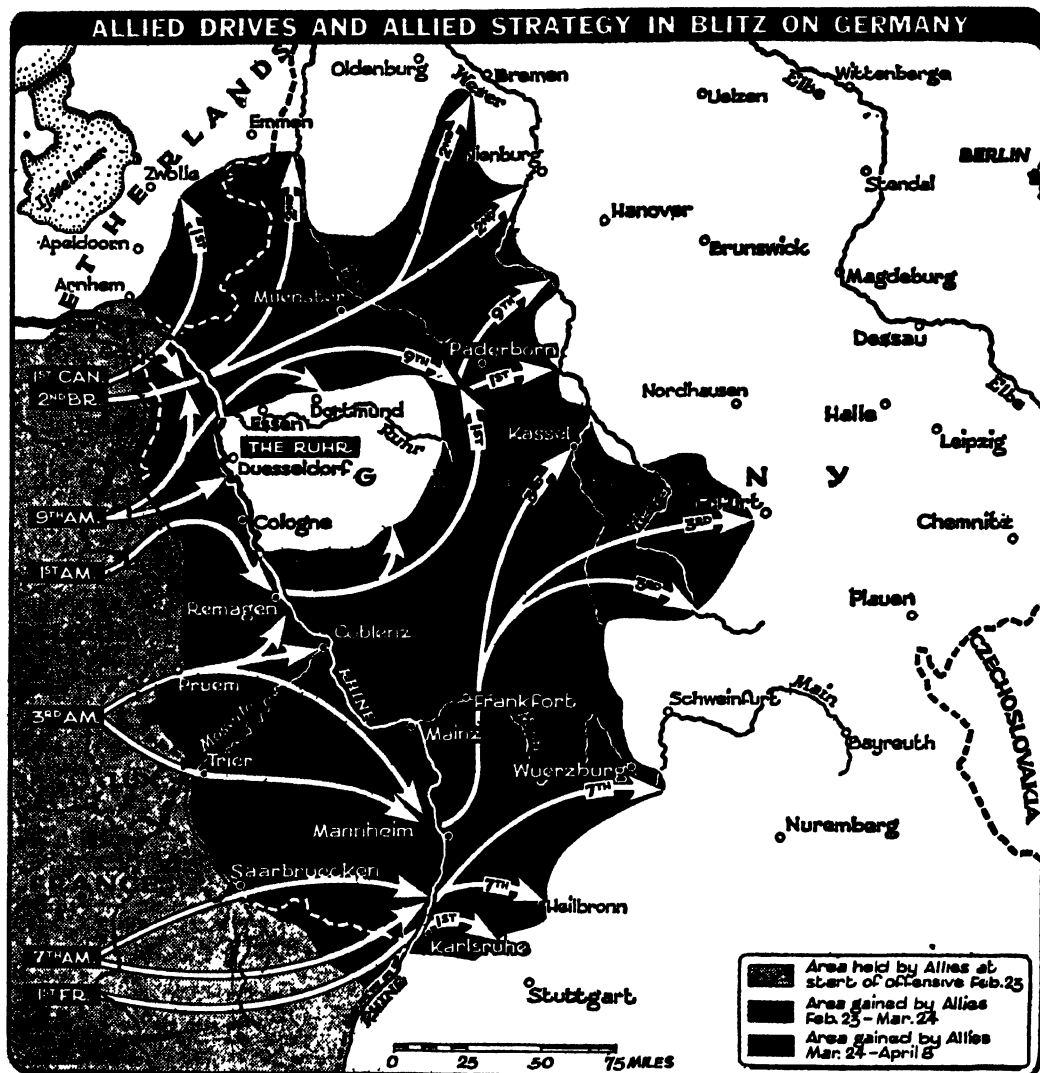

Opening the drive was the First Ukrainian Army which attacked between Sandomierz and Baranow in the wake of a terrific artillery preparation. Two days later, on the 14th, the First White Russian Army, which was to be the center of the main effort, and the Second White Russian Army began their western movement. The following day the front was again widened with the Third White Russian, in the north, and the Fourth Ukrainian Army, in the south, joining the action. Next into action went the Second and Third Ukrainian Armies, the former moving against the southern portion of Slovakia and the latter from the area between Budapest and Lake Balaton. At the same time the First Baltic Army again applied pressure to the Latvian beachhead. With all these Armies in action the line was approximately 560 miles long from north to south.

The action in January was fast and positive. Warsaw fell on January 17 to the First White Russian Army with which the Army of the Lublin Poles was operating. The next day the Second White Russian Army took Modlin, the fortress northwest of Warsaw. The First Ukrainian Army

captured Cracow and for this victory, plus the captures of Lodz, Praszka, Tarnow, and Leczyka, Premier Stalin on January 19 issued five orders of the day. On the 22nd Tannenberg, site of Russia's crushing defeat in World War I, fell to Marshal Rokossovsky's Second White Russian Army. On January 26 Stalin announced that the Red Army had reached the coast on Danzig Bay northeast of Elbing, thus encircling the German troops in East Prussia. While this resulted in isolating the East Prussia garrison from Germany, it still required a considerable Russian force to contain them.

Prior to the drive the Germans had withdrawn some of their forces in the Vistula region of Poland, but had maintained full strength in East Prussia and Latvia on the north flank and in Slovakia on the south. The result was that by the end of January the powerful Russian center drove 280 miles toward Berlin while the flanks had not made such great progress, so that the front that once had been a comparatively straight line was now a pyramid with the flattened apex spreading about 50 miles along the Oder River from Kuestrin to Frankfurt-on-the-Oder. The south side of the line ran sharply back to Cracow while the north side ran equally sharp back to Koenigsberg.

In February the Red Army sought vigorously to lengthen the straight portion of the front opposite Berlin so that it would run from Stettin at the mouth of the Oder River in Pomerania south along

THE ALLIED DRIVES FROM FEB. 23 TO APRIL 8

(N. Y. Times)

the Oder and the Neisse Rivers to about Goerlitz in Silesia on the edge of the Sudetic Mountains. With such a line the Russians felt they would be in a strong position for the final push on Berlin. In this she was not fully successful in February. In the north her line worked up to from 30 to 50 miles from the Baltic Coast while in the south the Neisse River was reached in some places, but not crossed.

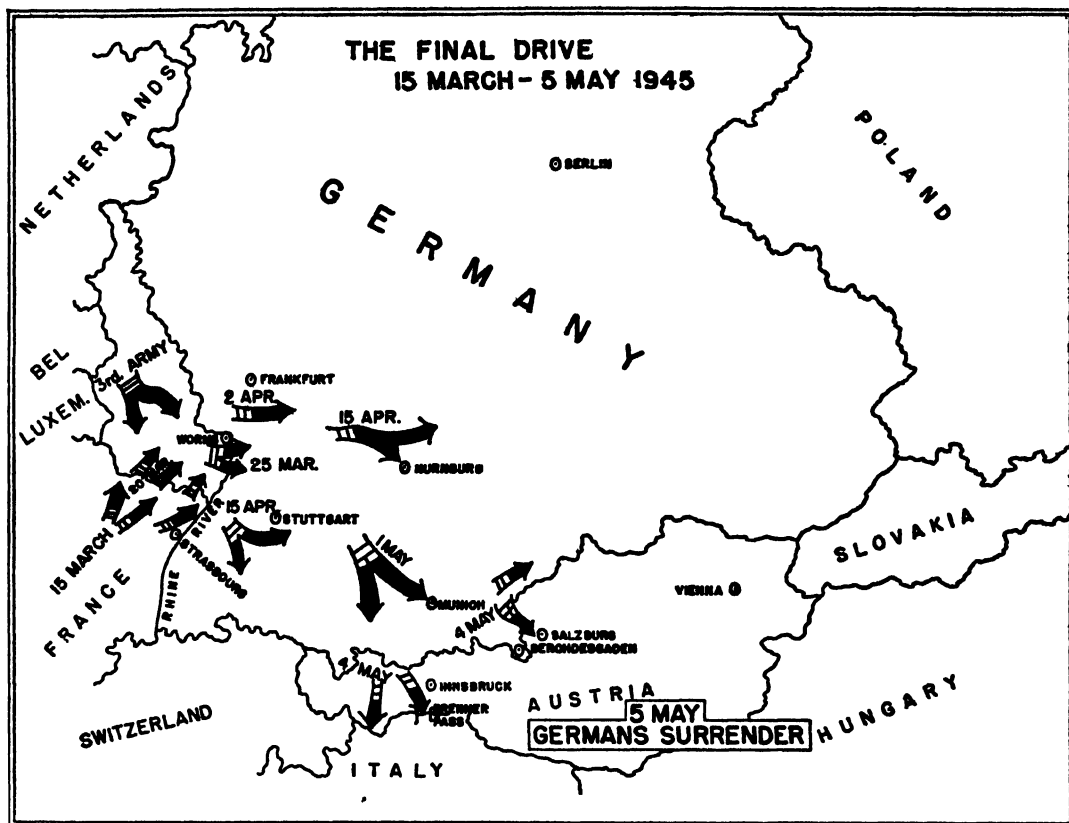

Meanwhile important events had been transpiring in the south. On January 22 the Soviet Union signed an armistice with a provisional government of Hungary stipulating that Hungary was to aid the Allies, although participation of Hungarian troops was not required, she was to return all territories and make restitution for war damages.

Budapest, surrounded by Russian Armies since Dec. 26, 1944, finally fell on February 13 after some of the most bitter house-to-house fighting of the war. The Second and Third Ukrainian Armies invested the twin city from both sides of the Danube. The city, doubly important because it

controlled the road to Bratislava and Vienna, was defended by the German IX and the Hungarian I Corps.

Pest, on the east side of the river, was cleared by January 18, but Buda held until February 13. The Russians announced that of the city's defenders 110,000 were taken prisoners and 49,000 killed, while 1,250 guns, 270 tanks, and a large amount of engines and railroad equipment were taken. The commander of the garrison, Colonel General Pfeffer-Wildenbruch, was reported to have been taken prisoner.

On the 27th anniversary of the Red Army, February 23, the Russians reported that in the first 40 days of the winter drive (up to February 23) 300 cities and thousands of villages had been taken, as were more than 100 factories, 2,400 rail stations and 9,500 miles of railroads. A total of 350,000 of the enemy were prisoners and 800,000 killed, 3,000 airplanes captured or destroyed, as well as 4,500 tanks and self-propelled guns and 12,000 guns of all calibers.

MOVEMENTS OF THE SIXTH ARMY GROUP, UNDER LT. GEN. JACOB A. DEVERS, U.S.A. (6th Army Group Hdq.)

Posen, which had been by-passed in the original sweep of Zhukov's First White Russian Army, was finally captured on February 23 after a month's siege. The commandant, Major General Matter, and 23,000 prisoners were taken. The Russians said that 25,000 Germans were killed. The victory was particularly significant in that it opened up communications to the Berlin-Stettin front where the Red Army previously had been operating on improvised supply lines. The Brandenburg front also was served by communications through Posen.

Early in March the First and Second White Russian Armies operated east and northeast of Stettin pushing to the Baltic Coast from a point east of the Oder estuary clear to the northwest of Gdynia except for the port of Kolberg, which held out. This action isolated Danzig and 150 miles of the Baltic Coast west of the city. Taken in this drive were the important cities of Koslin and Stargard, the latter being the point from which the Germans had counterattacked the First White Russian Army on its initial advance toward Berlin.

Having protected his right flank by the clearance of Pomerania, Marshal Zhukov further prepared his Oder front for the final assault on Berlin, by cleaning up many important points. He took Kammin on the Baltic on March 6. Kuestrin, strong German bridgehead east of the Oder, fell to his First White Russian Army on March 12 after severe fighting. For this event Moscow's guns fired their 300th victory salute since retaking Orel, Aug. 5, 1943.

Greifenhagen capitulated March 16 and Altdamm, on the east bank of the Oder opposite Stettin, fell on March 20.

With these victories the Armies of Zhukov and Konev now lined up on a 200 mile front facing west—a front that gave ample room for large scale operations and many points from which offensives could be launched.

On March 18 the First White Russian Army entered Kolberg, the first port on the open Baltic Sea to fall to the Red Army since the capture of Memel the previous January. Kolberg was isolated by Zhukov's forces during the drive to the Baltic two weeks previous but the German garrison had put up a hard fight in accordance with general German policy under which the troops in the Danzig Corridor still continued to hold the ports of Gdynia, Danzig, and Pillau and, in Latvia, the ports of Libau and Windau.

Kolberg gave the Soviet Baltic Fleet a base of operations from which it could tighten the blockade of the Bay of Danzig.

It was reported in March that Colonel General Ferdinand Schoerner had been appointed Commander in Chief of the German armies on the eastern front. Schoerner previously had been in Upper Silesia, but prior to that he had been in command in Latvia where he had prepared the defense of the ports which were still holding out.

Danzig fell on March 30—an event of far reaching strategic importance as well as of great morale value. The heavy pressure on Danzig and the port of Gdynia had begun to be applied by Marshal Rokossovsky's Second White Russian Army about two weeks previously, after he had finished helping Zhukov in the clean-up of eastern Pomerania. Gdynia was taken on March 28. With the capture of

Danzig the Russians came into possession of large stores of German arms and equipment, including 45 submarines taken in their pens. In the same period the Soviet Baltic Fleet, operating from Kolberg, took about 160 vessels of various types. The Baltic area was extensively used by the Germans for the training of submarine crews, trial runs of vessels, and for experimental work with new weapons, so any action which hampered her in the use of these waters was of direct aid to all of the Allied nations.

At the north end of the line, the Third White Russian Army, now commanded by Marshal Vassilevsky, who had succeeded Chernyakovsky upon the latter's death in February, cleaned up the Braunsberg pocket in East Prussia on March 20. Losing no time Vassilevsky immediately went to work on the assault on Koenigsberg, which he pressed vigorously until its capitulation on April 9. With the city went about 42,000 German prisoners. A German communiqué of April 12 announcing the fall of Koenigsberg stated that "General Lasch (who surrendered the fortress) was sentenced by court martial to death by hanging for his cowardly surrender to the enemy. His kin will be held responsible."

In southeast Europe, the Fourth Ukrainian Army, the command of which had passed to General Yeremenko, and the Second and Third Ukrainian Armies were active over a 300 mile front from the High Tatra mountains in Czechoslovakia and the Styrian Alps on the borders of Austria and Yugoslavia.

Yeremenko's army took Banska-Bystrica on March 26, starting the advance from the Hron to the Vah. Tolbukhin and Malinovsky's armies, after beating off the German counter-offensive in the Budapest area, took the offensive. Szekesfehervar, which had been taken on Dec. 24, 1944, and lost the next month, was again entered on March 24. In rapid succession the Red Army captured Gyer, Komarno, Szombathely, and Szopron. In moving into Austria the Soviet troops entered the tenth foreign country within one year.

Bratislava was captured April 4, then Wiener Neustadt, after which Russian armored forces began an encirclement of Vienna, breaking both road and rail communications to the city from the west. In Vienna's eastern suburbs other Russian units were hacking their way into the stronghold. On April 13 the capture of the city was completed by Marshal Tolbukhin's Third Ukrainian Army. Between March 16 and the fall of the city the Russians announced the capture of 130,000 men in the Vienna area, the huge number being the result of the German attempt to hold out instead of withdrawing in reasonable time as they had done in most instances prior to the fall of Budapest.

In the meantime the Second Ukrainian Army under Marshal Malinovsky had taken Hodonin in Czechoslovakia, on the west bank of the Morava River, 55 miles from Vienna, leaving clear the approach to Brno, Czechoslovakia's second city and a large armament manufacturing center.

On April 16 the Red Army began its "big push" for Berlin. A direct attack from the east was made by Zhukov while Konev's army moved across the Neisse River to approach Berlin from the south. Meanwhile, the German Ninth Army was concentrating southeast of Berlin. Konev, however, having captured Cottbus continued past Berlin to the approaches of Potsdam, while the First White Russian Army drove into the eastern suburbs of the German capital. At this point Zhukov sent a column south and Konev sent one north, so that the

two enclosed the German force southeast of Berlin. Next Zhukov moved a force northeast of Berlin then west to Nauen while Konev rushed some of his forces south of the city of Katzin, like Nauen west of Berlin. Then the two forces joined, isolating the Berlin area. Counterattacks to break out failed while the Red Army methodically proceeded to cut the area up into sections. On May 2 after day and night house-to-house fighting the remaining Germans surrendered—a force of 135,000 men. The Russians claimed that the battle had cost the Germans a total of nearly 500,000 in killed and prisoners.

While the Battle of Berlin had been in progress American and Red Army troops had joined at Torgau, on April 26, splitting Germany in two, Marshal Rokossovsky captured Stettin on April 27 and on May 2 made contact with British Field Marshal Montgomery's forces at Wismar.

In the south Yeremenko and Malinovsky had gone into Moravia.

Marshal Vassilevsky captured the East Prussia port of Pillau on April 25. On May 7 Breslau fell. Marshal Konev took Dresden on May 8 and entered Prague on May 9.

Thus in two and one-half years from the battle of Stalingrad the Red Army drove 1,400 miles to its meeting with the First U. S. Army at Torgau, Germany.

Western European Front. The Ardennes offensive, which began Dec. 16, 1944, had reached its maximum penetration of more than 50 miles into American lines and the bulge which it produced was in the process of being reduced as the year opened. Engaged in this, the last great German offensive, were the reconstituted Seventh German Army and the Fifth and Sixth SS Panzer Armies with a total of 24 divisions of which ten were panzers. The forces were under the over-all command of Field Marshal Karl Rudolph Gerd von Rundstedt with Field Marshal General Walther von Model in immediate command of operations. On the Allied side the defending forces, under the over-all command of General of the Army Dwight D. Eisenhower, were commanded in the north by British Field Marshal Sir Bernard L. Montgomery, commander of the 21st Army Group, under whose control most of the U.S. First and Ninth Armies had been placed, and in the south by General Omar N. Bradley, U.S.A., commander of the 12th Army Group.

The 21st Army Group opened a strong attack on the north side of the bulge on Jan. 3, thirteen days after the Third Army had executed a brilliant shift of the offensive from across the Saar to hit the other side of the bulge in southern Luxembourg. Despite the failure of the Germans to reach their primary objectives of Liege and Namur on the Meuse River (much less their ultimate objective of the supply port of Antwerp) they stubbornly resisted Allied pressure every inch of the way, so that by the end of the month when the reduction of the salient was completed their losses had run up to the terrific figure of 220,000 men, half of them prisoners. More than 1,400 German tanks and assault guns were lost. The weather was very bad, with snow, ice, and poor visibility, hampering both ground and air activity. Yet, taking every opportunity to get into the air, the air forces played an important part. It is reported that on Jan. 22 alone the Allied air force destroyed or damaged more than 4,192 pieces of heavy equipment.

British Prime Minister Churchill referred to the Battle of the Ardennes as the "greatest American battle of the war," pointing out that only one Brit-

ish Army Corps (the XXX Corps) was engaged and that "all the rest of the 30 or more divisions" were United States troops.

Meanwhile, in northern Alsace the U.S. Seventh Army, some of whose divisions had been detached for operations against the Ardennes bulge, withdrew in the face of enemy attacks, there being, as General Marshall reported, "ground to give." As a result the Germans reoccupied portions of the Maginot Line and cleared their West Wall in this area.

In the south Jan. 20 was chosen for the opening of an attack by the First French Army, General de Tassigny commanding, reinforced by some American Divisions made available by the then improved situation in Belgium. The Germans had been enlarging the bridgehead they already held around Colmar in southern Alsace and it was to reduce this that the French drive was aimed. The American XXI Corps made the drive through Colmar. The previous gains by the Germans not only were wiped out but the entire bridgehead was cleaned up, so that by early February the Allies were in possession of a line from Strasbourg to the border of Switzerland.

In February the Allies opened the great campaign that started on the Roer River and ended on the Elbe when victory came. The first phase of this grand operation as planned by General Eisenhower was for the First Canadian Army and the Ninth U.S. Army to push their way to the west bank of the Rhine River between Neuss and Emmerich, opposite the great industrial area of the Ruhr. Original plans had been for the whole operation to start early in January but the month's delay was necessitated by the Ardennes offensive. However, as a result of that action the German forces facing them were greatly weakened.

The campaign was opened Feb. 8 by the First Canadian Army, about 75 percent of which was British troops. The attack was preceded by six hours of artillery preparation and was provided with heavy air support. The drive got under way by quickly breaching successive lines of the Siegfried defenses. However, by the time Cleve had been captured and the Reichswald Forest cleared, the Germans had begun to recover from the initial shock. Paratroop units were brought into use and by their dogged fighting many road centers, including Goch and Calcar, were held by the Germans for some time until, often after fierce hand-to-hand fighting, they were driven out by superior numbers. The Germans attempted to stabilize a line through the Hochwald Forest to Geldern after Allied armored forces had broken through to Udem. This line could not be held because by this time the Ninth U.S. Army's operations began to have its influence felt in this area, so that the Germans were forced to fall back to the Wesel bridgehead with their flank at Xanten and Offenbergh. Allied pressure was continually maintained so that by the night of Mar. 9-10 the German troops were forced back across the Rhine.

The original plan had been for the Ninth U.S. Army to start its operations only a few days after those of the First Canadian Army so as to split the German reserves. This threat was forestalled by the Germans who on Feb. 9 blew up the Roer dams. This, together with the melting snow, turned the Roer River, which sometimes is only two feet deep in places, into a deep, fast running and dangerous waterway. For nearly two weeks the River maintained a rate of flow of from six to eight miles per hour, precluding the possibility of assault boating and bridging. During this period the Germans

moved up one Panzer Grenadier and two Panzer divisions to aid in the defense against the Canadian Army's drive. The Third U.S. Army, just south of the Ninth, was attacking to pin down further German reserves, with the result that when the Ninth Army was able to cross the river the attack was under favorable conditions.

Even so when the decision was made to move the Ninth across the Roer on Feb. 23 the river was still 80 yards wide with the current running $\frac{3}{4}$ to 5 miles per hour. The crossing was made on a 15-mile front, and at the same time the left corps of the First U.S. Army, to the south, attacked on a 9-mile front. It was the function of the First Army to protect the right flank and thus facilitate the first objective of getting the Ninth and the First Canadian Armies to the Ruhr section of the Rhine.

After the Roer crossing a number of bridgeheads were formed and linked up. Bridges were thrown across the river under concentrated German artillery fire, so that tanks and heavy guns could be brought over to support the breakout from the bridgehead. Armored and motorized infantry columns were sent out to the northeast and north. So rapid was the movement that a number of centers of resistance were by-passed by the advancing troops, to be mopped up later. Armored units reached the Rhine north and south of Düsseldorf by Mar. 2. By Mar. 3 the Ninth made contact with the First Canadian between Gildern and Kevelaer. The same day Muchen-Gladbach, Neuss, and Venlo were taken, and by Mar. 6 Krefeld, Homberg, and Rheinberg were free of Germans and the Ninth was on the Rhine along its entire front except in the northern sector where the Wesel bridgehead held out until Mar. 9.

Cooperating in these operations the Tactical and Strategic Air Forces struck at road and rail targets throughout all of Germany so as to isolate the battlefield. The air effort was hampered by bad weather, particularly during the period when the Germans were forming and holding their bridgehead at Wesel.

In this phase of the grand operations German casualties, according to figures from Allied headquarters, amounted to 52,000 captured and at least 60,000 killed and wounded, as the result of the U.S. Ninth and Canadian First Armies' actions. Allied casualties were placed at less than one-fifth of the Germans' total.

While this was going on the 12th Army Group, which now consisted of the First and Third U.S. Armies, also was active. Like that of the Armies to the north, the objective here was to clear all German forces west of the Rhine.

On Mar. 1 the First Army had made several crossings of the Erft River, cleared 26 towns and villages, and moved to within six and a half miles of Cologne. On the same day the Third Army cleared Bitburg and 19 other towns, and entered Trier the capture of which was completed the next day.

On Mar. 3 the First Army reached the Rhine between Düsseldorf and Cologne. Cologne was entered on Mar. 5 and the next day it was taken by the Third Armored and 104th Infantry Divisions of the First U.S. Army. At the same time the Fourth Armored Division of the Third Army was making a daring and spectacular run to the Rhine. This division broke loose from the Kyll River bridgehead near Bitburg on Mar. 5, making 16 miles that day to go through Eifel, 20 miles the next day, while on Mar. 7 it broke through to the Rhine northwest of Coblenz.

On Mar. 7 the Ninth Armored Division of the

First Army reached the Rhine and captured the bridge at Remagen intact. The Germans had attempted to demolish it just as they had the other Rhine Bridges, but at the railroad bridge only part of the demolition charge went off and while the bridge was damaged it had not fallen into the water. By fast staff work and shifting of plans quick advantage was taken of the situation. Engineers said that the "safety factor" was all that was holding the bridge up, but it held for five days and when it fell few men were lost, while in the meantime four floating bridges had been put across the river.

The bridgehead at Remagen was built up rapidly in spite of heavy German air attacks. Lack of adequate transportation hampered the bringing up of German reserves, but those that got there stubbornly resisted the expansion of the bridgehead which rapidly increased in value to the Allies.

The grand action that had begun in the north with the First Canadian Army and had, step by step, expanded by taking in Armies to the South, the Ninth U.S. Army, then the First U.S. Army, and the Third U.S. Army, now increased to take in the southernmost group—the Sixth Army Group composed of the Seventh U.S. Army and the First French Army. On Mar. 4 the Seventh Army made small gains, the next day clearing Forbach.

From this point on to Mar. 25 the Seventh Army engaged successfully in operations to close the area to the Rhine thus bringing to a successful conclusion a series of planned Allied operations all of which had the single purpose of destroying or driving out all German forces west of the Rhine River. The concluding chapter in this phase began with the Seventh's attack northeast in the Saar pocket on the morning of Mar. 15, which operation was coordinated with the Third Army's drive of Mar. 13 southeast from Trier and their establishment of a bridgehead over the Moselle on Mar. 14.

The Seventh's advance in the Saar was against strong, well-prepared opposition over terrain extensively mined and booby-trapped. Strong defenses, including the Maginot Line and rivers (the Moder, Sauer, and Lauter on the Army's right and the Horn and Sarre on the left), and finally the heavy belt of the Siegfried Line, opposed the advancing Army. Nevertheless by Mar. 20 the right of the Seventh Army had advanced 20 miles and had closed the Siegfried Line and on the left had breached it, reaching Homburg, Zweibracken and Saarbrücken. Armored elements then passed through the infantry, advanced to the south of Kaiserlautern, and contacted elements of the Third Army. Firmsasens was occupied on Mar. 22 and all organized resistance west of the Rhine ceased on Mar. 25.

Meanwhile, the Third Army made good initial advances in its attack southeast from the vicinity of Trier. On Mar. 14 a second attack was directed across the Moselle River west of Coblenz in a drive to the south. A wide and deep bridgehead was quickly established by the infantry. Armored units then passed through this bridgehead, and by Mar. 16 had advanced 35 miles, reached Bad Kreuznach and seized two bridges intact over the Nahe River.

Sensitive to the fact that the Third Army's armored thrusts to Bad Kreuznach seriously threatened their rear, the Germans hastily pulled strength from the Trier front and tried unsuccessfully to penetrate the shoulder of the Moselle breakthrough. The Allies then shifted armored units from the Seventh to the Third Army front and on Mar. 18 a complete breakthrough was effected in this area so that by Mar. 20 the outskirts of Kaiserlautern were

reached and contact made with armored elements of the Moselle attack. The remnants of four divisions of Germans were surrounded in the pocket that resulted.

Worms was entered on Mar. 21 and Mainz fell on Mar. 23. Infantry and Cavalry cleaned up enemy pockets of resistance while armored units cut German retreat routes and isolated additional German Forces.

Having reached the Rhine so quickly, the Third Army pushed across the river and by Mar. 23 had established a substantial bridgehead in the area south of Mainz.

Through all these operations weather permitted maximum air operations and every advantage was taken of it. German strong points, gun positions, avenues of withdrawal, communications centers, and supply installations were effectively attacked. As many as 1,000 planes daily were used against German columns.

The Saar, which was thus lost to the Germans, had been a source of much of their supply of both coal and iron for industrial uses. In addition, this major defeat lost to Germany much needed stores of equipment and many men. Of the 24 divisions used for the defense of the area west of the Rhine and south of the Moselle, the Germans lost 132,000 men as prisoners and suffered an estimated 56,000 casualties in killed and wounded. American total casualties were announced as less than one-eighth of the enemy's.

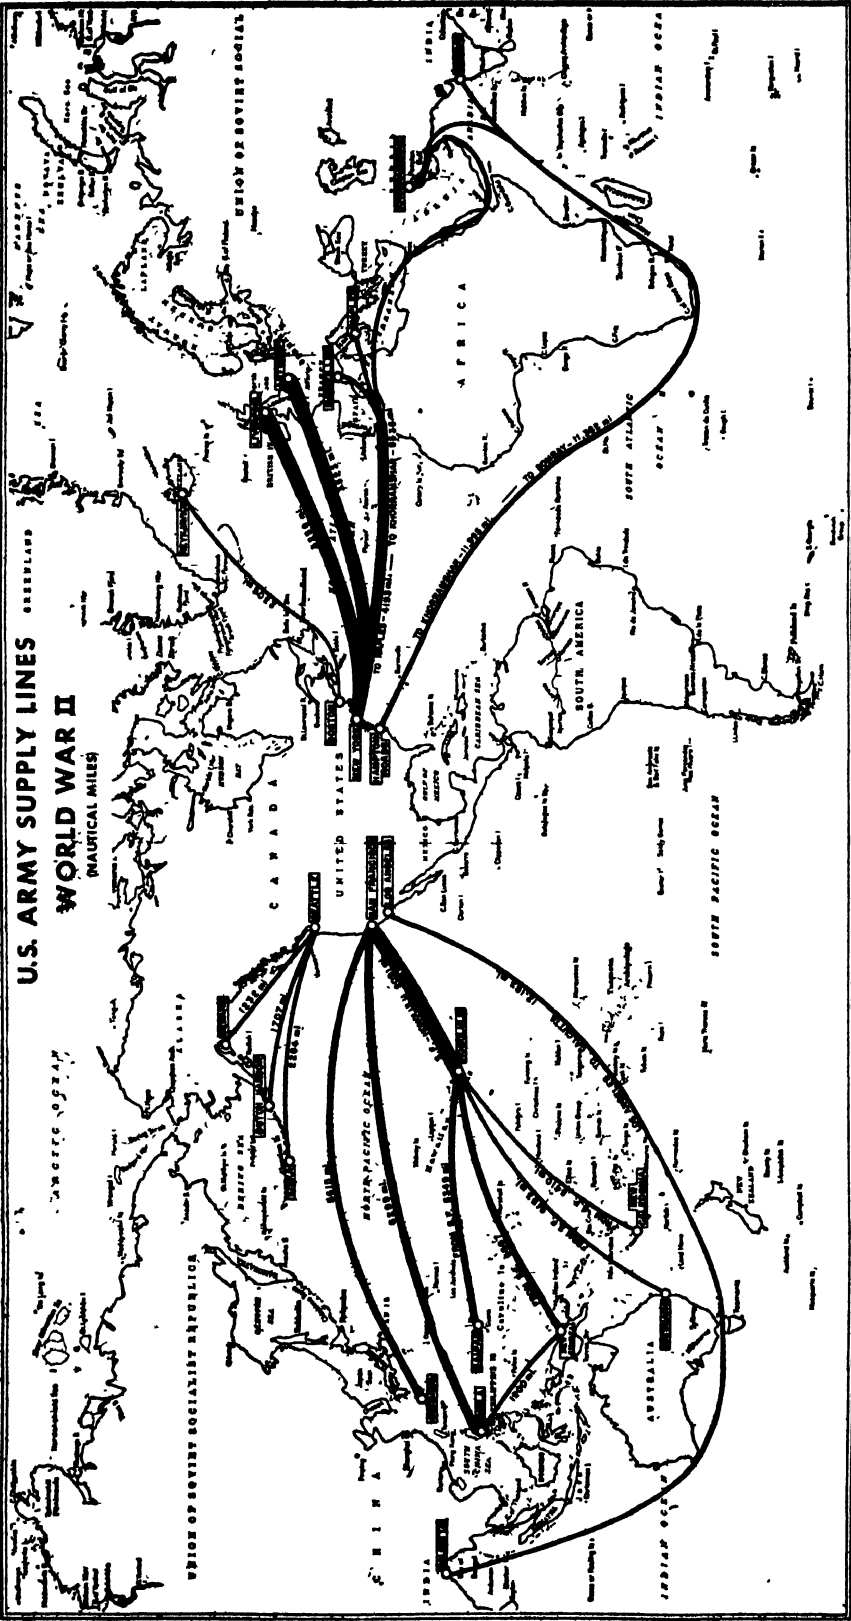

Gen. Eisenhower's decision to have the Third Army cross the Moselle and clean up west of the Rhine, instead of crossing the Rhine south of the Remagen bridgehead and moving northward to join with the First Army Forces, has been characterized as the second most critical decision in the campaign. The Germans expected the other decision, with the result that the Saar and the Palatinate west of the Rhine were promptly cleaned up.

According to Lt. Gen. Walter B. Smith, USA, Gen. Eisenhower's Chief of Staff, the most critical decision was that to undertake the gigantic double envelopment of the Ruhr rather than a single direct thrust into the Reich north of the Ruhr. This Ruhr action, which General Smith described as the "largest double envelopment in military history," was accomplished with the Ninth Army on the North driving to the east and southeast and the First Army from the south driving east thence northeast. The movement was executed with such skill and precision and the operations proceeded with such rapidity that the encirclement was completed on Apr. 1.

Preceding this movement the Second British Army crossed the Rhine on Mar. 23, the Ninth and Third U.S. Armies on Mar. 24 and the Seventh U.S. Army two days later. Naval landing craft of the Royal and U.S. Navies, secretly convoyed from the coast, partly by water-way and partly over roads, assisted the ground forces in crossing the Rhine. They also helped in the evacuation of casualties and performed patrol duties during the critical hours of crossing.

Reporting on this unusual participation of naval units in a military campaign in the heart of Europe, Fleet Admiral Ernest J. King, U.S. Navy, stated:

"The Naval crews assigned to the operation began training in England in Oct. 1944 and held their final practice maneuvers on the continent later in the winter. Considerable ingenuity and improvisation were necessary to overcome technical difficulties, the craft employed having been constructed for salt water use and not as river craft in the fresh

THE FAR-FLUNG LINES OF U. S. WORLD SUPPLY

(Annual Report, Army Service Forces)

water of the swift moving Rhine. Five LCVF units of 24 craft each were formed in England and later moved to the Continent and placed under the operational control of U.S. Army commanders and administrative control of Vice Admiral Alan G. Kirk, Commander, U.S. Naval Forces France; of these, three actually participated in the crossings."

After completing the encirclement of the Ruhr the drive eastward continued at a rapid pace. Armored elements swept forward, going around strongly defended centers and splitting up and isolating German units. Behind them came infantry to clean up remnants and solidify the gains. Most of it was moved by its motor transportation and some was aided by tank units. The Air elements maintained an incessant bombardment of the disintegrating German forces. On Apr. 11 Armored units reached the banks of the Elbe River near Magdeburg. There was not much opposition, but by an understanding with the Russians the Elbe was as far as the Allied forces were to go in this area. In explaining this agreement, General Bradley said: "Our plan was to meet along this line. It is much better to meet with one or the other stationary than with both on the move. You are less apt to have incidents. You have to remember we had never worked with the Russians. Methods of identification are not what we have among ourselves. Besides, our supply lines were long."

The significance of the Battle of the Ruhr is clearly brought out by Gen. Eisenhower in an Order of the Day issued on Apr. 20 as follows:

TO EVERY MEMBER OF THE A.E.F.:

The battle of the Ruhr has ended with complete success. Following hard upon the final destruction of the German forces west of the Rhine, the 21st Army Group thrust powerfully across that river with the U.S. Ninth Army under command. Simultaneously, rapid drives across the Rhine and from the Remagen bridgehead by 12th and 6th Army Groups provided the southern arm of a great double envelopment which completely encircled the entire German Army Group 'B' and two corps of Army Group 'H' whose mobility was rendered almost zero by our magnificent and tireless air forces. Thereafter, in the pocket thus created, the 12th Army Group eliminated 21 enemy divisions, including three Panzer, one Panzer grenadier, and three parachute divisions. Over 817,000 prisoners of war were captured including 24 generals and one admiral. Many tanks and more than 750 guns were destroyed or taken. Booty is immense and still being counted. The enemy's total losses in killed and wounded will never be accurately known.

The rapidity and determination with which this brilliant action was executed tore asunder the divisions of Field Marshal Model, and enabled all Army Groups without pause to continue their drive eastwards into the heart of Germany.

This victory of Allied arms is a fitting prelude to the final battles to crush the ragged remnants of Hitler's armies of the west, now tottering on the threshold of defeat.

So rapid had been the advance all along the line that on the day General Eisenhower issued the above order (Apr. 20) the First Canadian Army was fighting along the south of the Zuider Zee; the Second British Army took Delmenhorst, five miles west of Bremen; Ninth U.S. Army units bottled up an enemy counter-attack in the Brunswick area; the First U.S. Army took Leipzig; the Third U.S. Army closed up to the Czechoslovakian border; and the Seventh U.S. Army and the First French Army were driving south to outflank Stuttgart on two sides in the Reutlingen area.

On Apr. 23 the gap between the western Allied Forces and the Russians had narrowed so that the Ninth Army's forward troops were picking up Russian tactical radio traffic southeast of Magdeburg. On April 27 it was announced that the First Army's 69th Infantry Division had linked up with the 58th Russian Guards Division of the First Ukrainian

Army at Torgau on the Elbe River, 28 miles north-east of Leipzig.

General Omar N. Bradley, U.S. Army, commander of the Twelfth Army Group, issued the following Order of the Day:

SOLDIERS OF THE FIRST, THIRD, NINTH, AND FIFTEENTH AMERICAN ARMIES:

At 1640 hours Apr. 25, 1945, in the twenty-ninth month of our land war against the German Government, American troops of the 12th Army Group joined forces with Soviet elements of Marshal Koniev's First Ukrainian Army Group.

These Armies have come to you from the ruins of Stalingrad and Sevastopol—across the scorched cities of the Ukraine. In two years they have smashed 1,400 miles through German Armies to drive the enemy from Russia and pursue him to the Elbe.

Their achievements—and they have given immortality to a people that would not be conquered—are made more meaningful by your own deeds.

Across 3,500 miles of an ocean supply line, you forced a coast the enemy had been years preparing against you. Within four months after landing you destroyed whole Armies—to take Paris, free France, and give the world a symbol of freedom. When the enemy raised a new army and threw it into the winter battle of the Ardennes, you smashed it and flung its remnants back. You have beaten and broken down his mighty Siegfried line. You crossed the Rhine in your stride, encircled and reduced the Ruhr.

While demonstrating new lessons in mobile warfare, you have annihilated whole groups of German Armies in the West on their own German soil. In ten months you have fought your way 700 miles from the beaches. These accomplishments were secured by your courage, your resourcefulness, and by your comrades who died to achieve them.

You have shared in the liberation of four nations, given hope to others, and conquered half of Germany.

The people of America, who armed you, have had great faith in you. You have justified that faith as you will in the battles that follow.

By the end of April the First Canadian Army was mopping up north of Delmenhorst with units four miles southeast of Oldenburg; the Second British Army had two bridges over the Elbe at Lauenburg and a bridgehead seven miles deep; Ninth U.S. Army troops were in contact with the Russians at Apollensdorf; First U.S. Army troops were in contact with Russian elements near Wittenberg on the Elbe; Third U.S. Army infantry had closed up to the Passau along the left bank of the Danube with some units operating south of the Isar River; the Seventh U.S. Army had cleared Munich while other units captured Dachau; and First French Army troops were in possession of Friedrichshafen and across the Austrian frontier at the eastern end of Lake Constance.

By May 4 disintegration of German forces had reached such a point that Gen. Eisenhower issued the following statement:

The German forces on the Western Front have disintegrated. Today what is left of two German Armies surrendered to a single American division—the 102nd—commanded by Maj. Gen. Frank Keating.

In the north the remaining forces in Northwest Germany, Holland, Denmark and the Frisian Islands, including Heligoland, surrendered to Field Marshal Montgomery.

In the south Allied troops from General Devers' command and from Italy have joined up. On the Czechoslovakian border a Panzer division gave up unconditionally to Gen. Bradley's forces.

Any further losses the Germans incur on this front are due to their failure instantly to quit.

They know they are beaten. Any further hesitation is due either to their own stupidity or that of the German Government.

On land, sea and in the air the Germans are thoroughly whipped. Their only recourse is to surrender.

The next day Gen. Devers, commanding the Sixth Army Group, accepted the surrender of German Army Group "C," the surrender including 9,500 square miles of territory. On May 6 the 21st Army group units began occupational duties; the Third Canadian Division occupied the Emden sec-

tor, the First Polish Armored went into Wilhelms-haven, and the Second British Army occupied Cuxhaven with units penetrating north toward Denmark.

On May 7 an *Act of Surrender* was signed by Col. Gen. Gustaf Jodl, Chief of the Wehrmacht and Chief of Staff to Grand Adm. Karl Doenitz, who had succeeded Hitler as head of the State. The surrender papers were signed in Gen. Eisenhower's forward headquarters at Reims, France, and were witnessed by Lt. Gen. Walter Bedell Smith, Gen. Eisenhower's Chief of Staff; Gen. Ivan Susloparoff, head of the Russian Mission to France, and Gen. F. Sevez, of France. The terms of the surrender were as follows:

- 1. We, the undersigned, acting on authority of the German High Command, hereby surrender unconditionally to the Supreme Commander, Allied Expeditionary Force, and simultaneously to the Soviet High Command, all forces on land, sea, and in the air who are at this date under German control
- 2. The German High Command will at once issue orders to all German military, naval, and air authorities and to all forces under German control to cease active operations at 2301 hours Central European Time on Eight May and to remain in the positions occupied at the time. No ship, vessel, or aircraft is to be scuttled, or any damage done to their hull, machinery, or equipment.
- 3. The German High Command will at once issue orders to the appropriate commanders, and ensure the carrying out of any further order issued by the Supreme Commander, Allied Expeditionary Force, and by the Soviet High Command.
- 4. This Act of Military Surrender is without prejudice to, and will be superseded by, any general instrument of surrender imposed by, or on behalf of the United Nations and applicable to Germany and the German Armed Forces as a whole.
- 5. In the event of the German High Command or any of the forces under their control failing to act in accordance with this Act of Surrender, the Supreme Commander, Allied Expeditionary Forces, and the Soviet High Command will take such punitive or other action as they deem appropriate.

Although word leaked out both through German and Allied sources, official announcement of the surrender was withheld pending further ratification by the Russians which was forthcoming the next day.

Allied ground forces participating in these operations included 60 American divisions, comprising three airborne, 15 armored, and 42 infantry divisions. In addition there was a total of 14 British divisions, five Canadians, 11 French, and one Polish division.

U.S. casualties were reported as follows:

- Army—126,000 killed, 369,334 wounded, 3,996 missing, and 6,125 prisoners, making a total of 506,297. (report dated Oct. 31, 1945.)
- Navy—6,415 killed, 594 missing, 3,612 wounded or injured, 29 prisoners of war, making a total of 10,650. (Report, which includes Atlantic area, dated May 8, 1945.)
- Marine Corps—32 killed, one wounded. (Report, which includes Atlantic area, dated May 8, 1945.)
- Coast Guard—508 dead. (Report, which covers all operations against the European enemy, dated May 8, 1945.)

Air power played a major and decisive role in the entire campaign, both in its strategic opera-

tions against German industry and homeland and in its tactical operations in conjunction with the ground troops. A joint statement by the British Air Ministry and the U.S. Strategic Air Forces summed up the principal accomplishments as follows:

- 1. Air superiority was achieved before the invasion of Normandy and maintained throughout the successive stages of the Battle of France, the crossing of the Rhine, and the Battle of Germany. During the last few weeks a large proportion of Germany's air force was destroyed wholesale on the ground.
- 2. The German oil supply was steadily reduced in a 12-month period despite a vigorous effort by the enemy to repair bomb-damaged plants to a point where his over-all oil production was only seven and one-half percent of what it was in April, 1944, and his petrol production was only three and one-half percent. This seriously affected his war potential on all fronts—land, sea, and air—so that at the end, neither his air force nor his army was mobile.
- 3. At various stages of the campaign by dropping a more concentrated weight of explosives than ever before used in warfare, the heavy bombers paved the way for a ground force offensive that later broke through. This was the case at Caen, St. Lo, the Ruhr and the Rhine.
- 4. At various stages, the strategic bombers joined the tactical air forces in the job of isolating the battlefields. So successful was this program that the enemy could never move in his reinforcements without the utmost delay and confusion.
- 5. On several occasions, this interdiction by all air forces was followed by an encirclement of the enemy and he was cut to pieces by strafing and bombing of the pockets or forced to surrender in large force. This occurred at Falaise, along the Seine, along the Loire, and in the Ruhr.
- 6. The special weapons developed by the enemy, notably the V-bomb and jet-propelled airplane, were reduced in effectiveness by our bombing of component factories, experimental stations, launching sites in the case of V-1s, and airfields in the case of jet aircraft.

In September a special U.S. Strategic Bombing Survey, the membership of which was composed of civilians, reported to the President on the European war. Among its conclusions were:

- By the beginning of 1945, before the invasion of the homeland itself, Germany was reaching a state of helplessness. Her armament production was falling irretrievably, orderliness in effort was disappearing, and total disruption and disintegration were well along. Her armies were still in the field. But with the impending collapse of the supporting economy, the indications are convincing that they would have had to cease fighting—any effective fighting—within a few months.
- As the air offensive gained in tempo, the Germans were unable to prevent the decline and eventual collapse of their economy. Nevertheless, the recuperative and defensive powers of Germany were immense; the speed and ingenuity with which they rebuilt and maintained essential war industries in operation clearly surpassed Allied expectations.
- The achievements of Allied air power were attained only with difficulty and great cost in men, material, and effort. Its success depended on the courage, fortitude, and gallant action of the officers and men of the air crews and commands. It depended also on a superiority in leadership, ability, and basic strength.

Following is the Order of Battle, European Theater of Operations (as of May 7, 1945) as given in the final report of the Chief of Staff, Gen. of the Army Marshall. (The order of battle of the Allies of the U.S. is not shown below Army level, except where American forces were under their operational control.)

ORDER OF BATTLE, EUROPEAN THEATER OF OPERATIONS.

Unit	Commander	Location
Supreme Headquarters Allied Expeditionary Forces.	General of the Army, Dwight D. Eisenhower	Main Headquarters, Versailles, France.
		Advance Headquarters, Reims, France.
Northern Group of Armies (21st Army Group)	F/M Sir Bernard L. Montgomery ..	Suchteln, Germany.

* Exercised operational control over Fifteenth Air Force shown under Mediterranean Theater of Operations

Occupation of Germany. When Germany fell the Allied powers were ready with plans for its occupation. The Yalta Conference had decided that Germany was to be governed through a Control Council on which each of the four powers was to be represented and each would occupy and govern a specified zone. Similar plans were made and carried out for Austria.

For months prior to Germany's collapse the U.S. Army, Navy, and Air Forces were perfecting plans for the occupation of that part of Germany which was assigned to their jurisdiction, which included the whole of Bavaria, Wurtemberg, Hesse and Hesse-Nassau, and the northern portion of Baden, and, in addition, a portion of Berlin and the ports of Bremen and Bremerhaven. On May 11, within a few days of the surrender, the U.S. announced the organizational plans for its part in the military government of Germany. A U.S. group Control Council was set up divided into 12 major divisions roughly corresponding to the ministries of the German central government. These divisions were:

(1) Three military divisions—Army (Ground), Naval and Air—to deal with the demobilization of the German armed forces, and the disarmament of Germany.

(2) The Transport Division to regulate traffic movements, supervise railway, road and inland water transportation systems, and, with the Naval Division, handle port and coastal operations.

(3) The Political Division to deal with all foreign affairs, handle domestic political matters, protect American interests in Germany.

(4) The Economic Division to deal with such problems as food, agriculture and forestry, fuel and mining, price control and rationing, public works and utilities, internal and foreign trade, industry, conversion and liquidation, and requirements and allocations.

(5) The Finance Division to control public finance, and deal with financial institutions, foreign exchange, currency, and accounts and audits.

(6) The Reparation, Deliveries and Restitution Division to supervise, in the American Zone, the execution of these policies as agreed upon in the Control Council.

(7) The Internal Affairs and Communications Division to supervise public safety, including control of civil police forces, public health and welfare, post, telephone and telegraph, military communications, civil service and local government, education and religious affairs.

(8) The Legal Division to give legal advice to the Commander and other divisions to have jurisdiction over prosecution of war criminals, and to exercise proper controls over Allied Military courts, German ordinary and military courts, and prisons.

(9) The Prisoners of War and Displaced Persons Division.

(10) The Manpower Division to deal with problems of labor relations and allocations, wages and labor policies, housing and labor information.

When hostilities ended in Europe the United States had 3,500,000 men in that theater. By Sept. 1, this number had been reduced to 2,312,000 and by the end of the year to 673,000. During the same period the American forces in Europe established military government in the U.S. occupied zones of Germany and Austria, maintained law and order, and made considerable progress in repatriating displaced persons, disposing of German prisoners of war and in inventorying and safeguarding surplus American property and enemy war materials. More than 2,708,000 displaced persons were returned to their native countries by U.S. Forces.

In Italy the Allied powers resumed diplomatic relations with the Italian Government early in 1945 so that from that time political matters, which formerly came within the scope of the Allied Control Commission, have been dealt with by the diplomatic representatives. By the end of the year most of Italy had been transferred from control of the Allied Military Government to that of the Italian Government.

Southeast Asia. In the India-Burma theater, the Japanese, having been defeated in the 1944 Imphal-Kohima offensive against India, apparently based their 1945 plans largely on holding actions. They sought to hold the British in Arakan, in Central Burma they attempted to profit from the natural defensive positions by delaying actions, and in the northeast their efforts were devoted to delaying the reopening of the Burma Road.

Opposing the Japanese were the forces of the Southeast Asia Command, which had been set up in 1943 to drive the Japanese out of that area and to keep China in the war by providing the means to get supplies and equipment to her. Adm. Lord Louis Mountbatten was Supreme Allied Commander and at the close of the campaign his Deputy Supreme Allied Commander was Lt. Gen. R. A. Wheeler, U.S. Army. Adm. Sir Arthur J. Power was Commander-in-Chief of the East Indies Fleet, and Air Marshal Sir Keith R. Park was Allied Air Commander-in-Chief.

The Allied land combat force, according to British figures, was composed approximately of 340,000 Indians, 100,000 British, 70 Africans, 65,000 Chinese, and 10,000 Americans, supported by 47 American and British air squadrons. Including all categories of troops, the U.S. had 166,600 men in the India-Burma theater when the Japanese surrendered.

Headquarters for the command was at Kandy, Ceylon, which was closer to Singapore, an ultimate objective of the campaign, than any other available base.

The Allied Land forces were under the command of General Sir Oliver Leese and included the following three major elements:

The Northern Combat Area Command including four American-trained Chinese Divisions, the British 36th Division, and the U.S. Mars Force of two brigades, all under the command of Lt. Gen. Daniel I. Sultan, U.S. Army.

The Fourteenth British Imperial Army, which included the IV Corps and the XXXIII Corps, with a total of 10 to 12 divisions, under the command of Lt. Gen. Sir William Joseph Slim.

The XV Corps with three divisions of Indian and African troops, commanded by Lt. Gen. Sir Philip Christison.

One of the major objectives, the opening of a road to China was accomplished at the beginning of the year. At the Burma-China border, Wanting was occupied by Chinese forces on Jan. 20. Two days later the road to China was opened. The first China-bound convoy left Ledo on Jan. 12 and arrived in Kunming Feb. 4.

At the beginning of the year a British Commando Brigade landed on the island of Akyab, from which the Japanese had withdrawn, and began preparing it as a base for continued operations in Central Burma. The Commandos next, on Jan. 12, made landings at Myebon on the mainland to cut off the Japanese communications. This was followed by landings at Kangaw and then the islands of Ramree and Cheduba.

Further amphibious operations were made in February by the 25th Indian Division at Ru-Ywa

British Landings in Burma Set Trap on Rangoon

British troops have been landed on both banks of the mouth of the Rangoon River (1), twenty miles below Rangoon, to cut off the city from the sea and trap a Japanese force estimated at 30,000 that also is menaced by British and Indian troops that have advanced beyond Pegu (2) and are reported within thirty-six miles of the city on the north. British destroyers also destroyed ten small Japanese craft trying to cross Martaban Gulf to Moulmein.

paratroopers were dropped to clear the beach-heads following which, amphibious landings were made on both banks of the Rangoon estuary 20 miles south of the town. Against this tightening trap the Japanese on May 3 withdrew from Rangoon and fled to the northeast.

Gen. Slim's timing had been very nearly perfect, for the monsoon, disregarding forecasts, broke on May 1. The troops landed from the sea and proceeded through the city of Rangoon and out to the north where contact was made with the land attacking forces a few days later.

It was estimated that all that was left of the 28th Japanese Army was about 18,000 men who were cut off in the hilly jungle area of Pegu Yomas. In July an attempt was made to break out of this position by making for the area east of the Sittang River. However, the Allied forces were prepared for such a move with the result that about two-thirds of the Japanese force was killed or captured.

The recapture of Rangoon meant virtually the recapture of Burma. The port and the route to China were now completely in Allied hands.

The opening of the great pipeline to China, too, was a major step in the campaign. In this connection the following joint statement was released May 6 by Maj. Gen. W. E. R. Covell, U.S. Army, Comm. Gen., Services of Supply, India-Burma

Theater, and Maj. Gen. G. X. Cheves, U.S. Army, Comm. Gen., Services of Supply, China Theater on the pipeline bringing much-needed gasoline to China:

Gasoline for airfields, trucks, and similar military installations in the China Theater is now being transported over the world's longest pipeline, beginning at Calcutta, traversing the length of the Brahmaputra Valley to Assam, crossing the Patkai mountain range into Burma and then continuing over the hump of the Himalayas across the border into China.

Engineer Petroleum Distribution Companies of the Services of Supply, India-Burma Theater, with the help of Indian and Chinese labor, are at work on the pipeline and completed portions will materially increase combined tonnage over the Hump and the Stilwell Road, the route which it generally follows.

The pipeline, which largely depended upon the opening of a road between China and India, will help the U.S. Forces of both India-Burma and China Theaters in their mission of aiding the Chinese in the mutual struggle against the Japanese.

Between Feb. 1, 1944 and Apr. 30, 1945, the Japanese 15th, 28th, and 33d Armies had been wiped out. Adm. Mountbatten announced on May 5 that the Japanese casualties totalled 347,000, with 97,000 of these counted corpses.

The China Theater. In China, where 1945 marked the last half of the eighth and the beginning of the ninth year of continuous war with the Japanese Empire, the opening of the year saw a continuance of the Japanese successful efforts to clear the bases of the U. S. Fourteenth Air Force from the eastern portions of China. Suichwan, American air base east of the Japanese corridor from Hankow to Canton, was evacuated by the Fourteenth Air Force on Jan. 22. Two days later its defenders destroyed what installations they could and abandoned it to the Japanese.

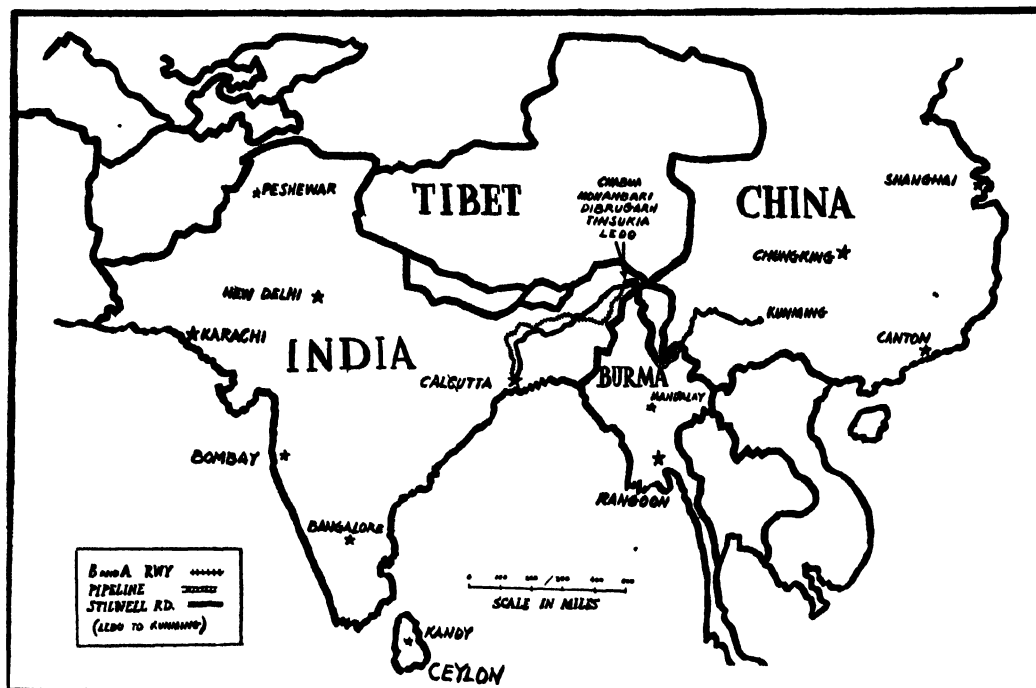

On Jan. 29 the air bases at Sincheng and Nanyang, south of Suichwan, also were abandoned by American air forces, while evacuation of the base at Kanchow followed the next day.

Kukong, Kwangtung capital, on the Canton-Hankow Railway, fell to the Japanese on Jan. 28 after most bitter fighting.

By these victories the Japanese cut in two the Chinese held area along the coast west of Hong Kong, and ran a Japanese path from Swatow northwest to Suichwan, slicing up the Chinese held area northeast of Hong Kong.

However, the picture was not all dark for the Allies, for the battle for supplies was showing definite improvement. In one month 46,000 tons of badly needed supplies were flown over the Hump. This represented more than three times the tonnage of Jan., 1944. Also the efforts of Chinese, British, and American troops and engineers in Burma were successful in reopening the overland supply route, so that on Jan. 28 the first convoy to China in almost three years arrived at Wanting over the Ledge-Burma Road, to which Generalissimo Chiang Kai-shek gave the name "Stilwell Road."

The increased supplies to China permitted a stepping up of the training program and the plans for reorganization of the Chinese combat forces. On Feb. 9 Chinese Army Headquarters were established in Kunming and General Ho Ying-chin was selected as commander in chief of the ground forces. Lieutenant General A. C. Wedemeyer, commander of the United States Forces in China and American Chief of Staff to Generalissimo Chiang Kai-shek, pointed out that Kunming, an important terminal for supplies from India, had been threatened by the Japanese and that its defense was imperative. The new disposition of Chinese forces was made with that end in view. Appointed to assist General Ho in the defense of this vital area were

THE BURMA AND ASSAM RAILWAY, THE PIPELINE, AND THE STILWELL ROAD

Major General Gilbert X. Cheves, U. S. Army, and Major General Claire Chennault, U. S. Army.

The city of Pingshek, above Canton, was recaptured by Chinese forces on Feb. 14, thus temporarily breaking the Japanese hold on the Canton-Hankow Railway. However, the victory was short-lived for the Japanese retook the town four days later.

After continuous fighting the Chinese forces succeeded in retaking Suichwan and its air base on Mar. 11.

On Mar. 22 the Japanese, from bases at Yen-cheng, Chumatiem and Kwangsi on the Peiping-Hankow Railway, and Loyang on the Lunghai Railway, opened attacks on Nanyant in Southern Honan from four directions. In northern Hupeh the Japanese drove toward Laohokow from Kingman with bitter fighting near Nanchang. Under this pressure the Fourteenth Air Force was again forced to abandon a base, evacuating Laohokow on Mar. 26.

Early in April the Chinese opened a counter-offensive in the Honan-Hupeh area. On Apr. 11 Japanese troops at Siangyang, Tzechung, Laohokow, Penghsien, Siuchwan, and Hsichiakou were attacked in concert with attacks by Chinese troops operating behind the lines. Next day the Chinese broke into the city of Laohokow, street fighting continuing all day until evening when the Japanese retreated toward Tenghsien. Also on the 12th Chinese troops occupied Miaotang, and Tseohshih.

In April and May the Japanese conducted a determined drive in western Hunan toward the city of Chihkiang, a base of the U. S. Fourteenth Air Force and the site of a large Chinese Army training center. On May 1 two Japanese spearheads were within 53 and 60 miles of the important center and Chinese troops were heavily engaged with columns coming west from Paoking and north from Chengpu. On May 2 Chinese forces under General

Ho Ying-chin recaptured the village of Wuyang, an important point because it straddles the road leading northward to the Paoching-Chickiang road and guards the entrance to a valley leading to the American air base at Chickiang.

The Japanese had early encircled Wukang, another important road center. But the Chinese garrison held out and after a siege of seven days Chinese forces on the outside fought through and relieved the beleaguered city. By holding despite the encirclement, the garrison of Wukang seriously hampered Japanese efforts to outflank the main Chinese defenses on the Paoching-Chihchiang road.

On May 10 the Chinese troops counterattacked along the entire front in the Hunan Province, driving north and northeast in the wake of retreating Japanese. Other columns from the Wawutang area reached positions close to the important road town of Tungkou. On May 13 the Chinese ground forces recaptured Tungkou, encircling a large body of Japanese troops southeast of the town and a smaller force north of Tungkou near Shanmen. Farther east on the road, Chinese forces, which had cut behind the Japanese positions in the Tungkou area, arrived at the outskirts of Taohuaping, only 40 kilometers west of the main Japanese base at Paoching.

By the end of the month Japanese troops in western Hunan had been pushed back to 15 to 20 kilometers west of Paoching. Hsinning was in Chinese hands while some Japanese remnants west and south of the city were being cleaned up.

Summarizing the results of the Western Hunan Campaign, Major General Kung Chi-kuang announced on June 2 that between Apr. 9 and May 28 the Chinese inflicted 28,000 casualties on the Japanese, took 15,000 Japanese officers and 230,000 enlisted men prisoners, captured 1,496 rifles, 100 machine guns, 24 artillery pieces and large quantities of supplies.

HOW ARMY AIR FORCES CLEARED CHINA'S SKIES

4 JULY 1942 to 4 JULY 1945

PREPARED BY P.R.O. 14TH AF FROM DATA COMPILED BY 24TH SCU 14TH AF - 1 JULY 1945

THE XIVth AIR FORCE'S WORK OVER CHINA

It was later revealed that the American-trained and equipped Chinese New Sixth Army, veterans of the north Burma campaign, had been moved into the Chihchiang area of western Hunan during the defense of that air base. Most of the men and animals were flown into the area by the U. S. Air Transport Command.

In the southern Kwangsi province the Chinese had been engaged in a determined campaign against Nanning, former American air base which had been evacuated Nov. 20, 1944. The area was strategically important because of its being a terminal point for traffic westward on the West (Yu) River from Canton and Hong Kong and also as a junction point on the main road connecting French Indo-China and Japanese forces in Central China.

Nanning was entered by Chinese troops on May 26 and by the next morning was completely in Chinese hands with the Japanese withdrawing in two columns, one going northeast toward Pinyang and the other southwest toward Suifu.

Other forces had been engaged in the recapture of the coastal port of Foochow, which had frequently been mentioned as a possible landing spot for American forces. The main attack on this Fukien front was launched on the morning of May 10. One column broke through Japanese positions northwest of the city and entered Foochow city May 11, another column taking the airfield south of the city. Street fighting was in progress day and night. Within a few days the Japanese received reinforcements from Lienkong and Mamoi, so that on the night of May 13 the Chinese were forced out of the city. Fighting continued on the outskirts of Foochow with the Chinese again forcing an entry to the city on May 19 and driving the Japanese out. The Japanese withdrew to the north pursued by the Chinese troops. Meanwhile the Japanese landed troops at Saipu to relieve the forces retreating from Foochow. The landing parties were heavily engaged by Chinese militiamen, but were successful in taking Saipu. The town was not held for long, however, for the victorious Chinese Army drove north from Foochow and retook the port.

Further to the north, on the Chekiang Coast, there was another center of activity as the Chinese recaptured Pingyang, south of Yungkia on June 13. June 18 Chinese forces recaptured Wenchow, coastal port which had been occupied by the Japanese for nine months. Located at the mouth of the Wukiang, Wenchow had been captured by the Japanese on three different occasions since the outbreak of the war.

June's greatest activity centered in the south province of Kwangsi. The principal prize sought here was the ancient walled city of Liuchow, former Fourteenth Air Force Base, which had fallen to the Japanese in November of 1944. Its importance lay in its strategic locality which permitted effective operation of aircraft against Japanese troop routes and supply lines around Canton and Hong Kong. It was also an important rail and road center with rail routes running northeast to Kweilin and to Hengyang, northwest to Kweiyang and south nearly as far as Laipin.

Ishan, an outer defense bastion of Liuchow, the scene of bitter fighting, was taken by the Chinese on June 10, retaken by the Japanese the next day only to fall into Chinese possession again on June 14, the Japanese defenders withdrawing to the southeast along the road to Tatang. On June 23 units of the Chinese forces crossed the Yungkiang and captured Tatuchen, 13 kilometers north of Liuchow, by which time other Chinese forces were fighting in the western suburbs of Liuchow, north of Liuchow. Capture of Liuchow was announced on June 30, simultaneously with announcement of the reoccupation of Linhai on the China coast.

Chinese victories continued on through July. On the 15th the former American airfield at Kanshien, 250 miles north of Hong Kong, was retaken, giving the Fourteenth Air Force an advanced base from which to cover the China coast. Meanwhile Chenghsien in Chekiang province, 117 miles south of Shanghai and 59 miles southeast of Hangchow, was captured.

Namyung, also a former air base for the Fourteenth Air Force, was taken by the Chinese a few

days later. Yangso was recaptured July 24. Kweilin, 45 miles north, another former American airfield, was the target of the next Chinese attack.

Pinglo, Japanese supply base in south central China and long a target for American bombing attacks, was reoccupied by Chinese troops the end of July, while other units were thrown against the former U. S. airfield at Lingliang, 370 miles south-east of Chungking.

As the fighting part of the war neared its end the Chinese captured the South China port of Geung-kong west of Hong Kong and drove on toward Canton.

On Aug. 8 Soviet Russia declared war against Japan and the next day launched an attack in great force into Manchuria. With tanks in the lead the far eastern forces of the Red Army bore into the Japanese held territory, gaining 105 miles the second day. In Korea, Russian Marines took the port of Rashin while other units landed on Karafuto, the Japanese southern half of the island of Sakhalin.

Under Marshal Vasilevsky, the Red Army operations lasted until Aug. 19, after which resistance ceased and Soviet troops were able to take towns merely by marching into them. Port Arthur and Dairen were taken by parachute troops. A Soviet

the Tenth and the Fourteenth Air Forces. Maj. Gen. Claire Chennault, U.S. Army, whose work in China dated back to the organization of the American Volunteer Group of "Flying Tigers" before our entry into the War, and was first commander of the Fourteenth Air Force when we entered the War, asked to be relieved. His request was granted and he was transferred back to the United States for retirement.

Also active in the China theater was a group of U.S. Naval, Marine Corps, and Coast Guard personnel under Rear Admiral Milton E. Miles, U.S. Navy, who was commander, Naval Group China, and Deputy Director of the Sino-American Cooperative Organization. This group directed the gathering of meteorological data for use in forecasting weather over the Pacific and also gave arms and instruction in combat to more than 25,000 Chinese guerrilla troops.

United States Army casualties in Asia, including India, Burma, and China, totalled 6,020, of which 2,303 were killed, 2,437 wounded, 845 missing, and 435 taken prisoners.

The order of battle of United States Forces in the China Theater as of Aug. 14, 1945 (from General Marshall's report) was:

<i>Unit</i>	<i>Commander</i>	<i>Location</i>
Headquarters, U. S. Forces, China Theater.	Lt. Gen. A. C. Wedemeyer	Chungking, China.
U. S. Army Air Forces, China Theater	Lt. Gen. G. E. Stratemeyer	Chungking, China
Tenth Air Force	Maj. Gen. H. C. Davidson	Luichow, China.
Fourteenth Air Force	Maj. Gen. C. B. Stone, 3d	Kunming, China.

communiqué of Sept. 10 summed up the campaign as follows:

"In the far East our army and navy from Aug. 9 to Sept. 9, 1945, inflicted the following losses on the enemy in manpower and equipment:

"The following were captured: 925 planes, 369 tanks, thirty-five armored cars, 1,226 field guns including self-propelled, 1,340 mortars, 4,836 machine guns, about 300,000 rifles, 133 radio transmitters, 2,300 trucks, 125 tractors and haulage tractors, 17,497 horses, 742 stores of ammunition, arms, equipment and provisions.

"More than 594,000 Japanese officers, and men and 148 generals surrendered to our troops, including about 20,000 wounded. The Japanese lost in killed alone more than 80,000 officers and men.

"Thus, the total Japanese losses in men, excluding crews of sunken Japanese ships, amount to more than 674,000 officers and men killed or captured.

"The ships and troops of the Pacific Fleet in the same period sank the following Japanese ships and vessels: two destroyers, twenty-eight transports, three tankers, five motor launches, twelve barges and schooners.

"For the same period the losses of our troops in the Far East were 8,219 men killed and 22,264 wounded."

At the time of the Japanese surrender plans had been completed for campaigns against Hong Kong and Canton to provide the Allies with good port facilities for strengthening the supply lines to China. The offensive was to have opened Aug. 18, but the Japanese announced their acceptance of the terms of the Potsdam Declaration on Aug. 14.

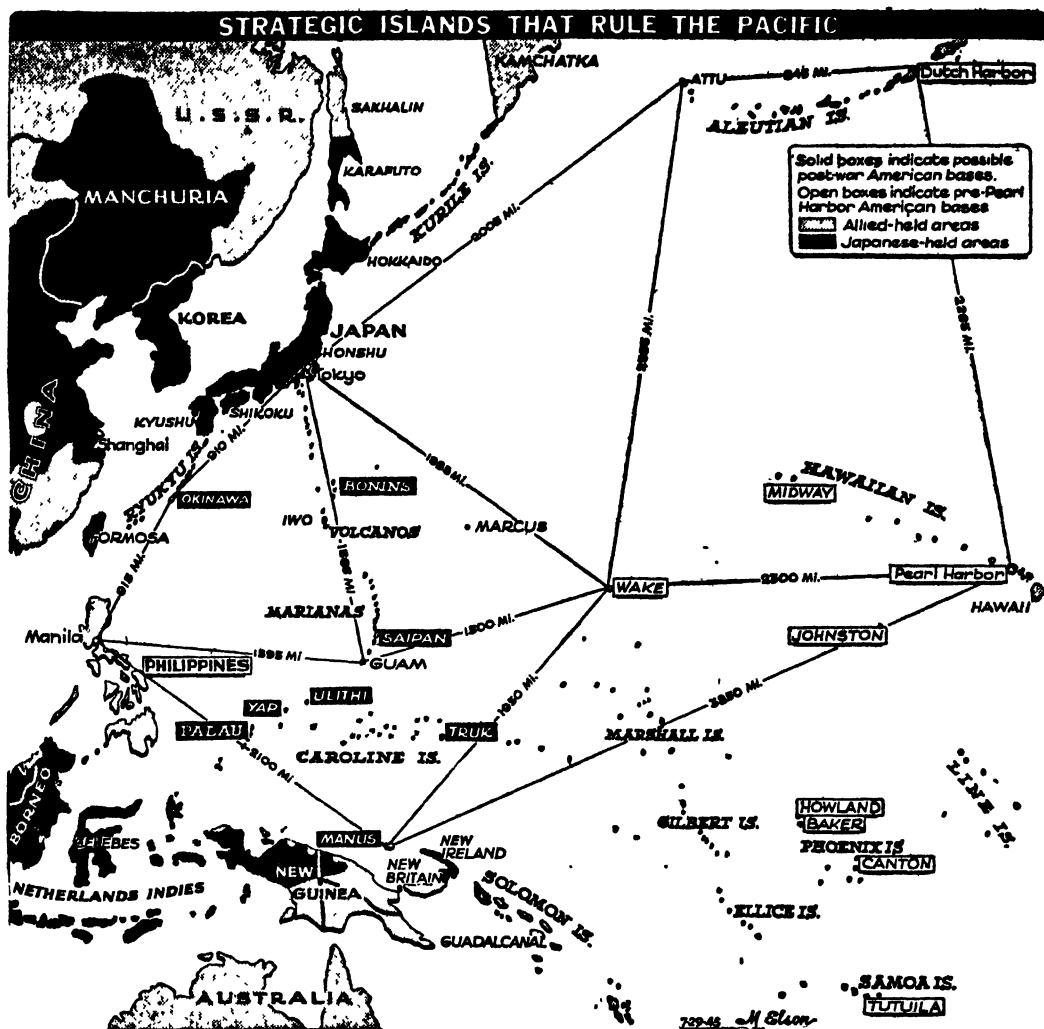

The American Air Forces played a great part in the campaigns in China, both the combat planes in bombing and strafing the Japanese and the Air Transport Command in bringing supplies and aiding in the transporting of troops and material. When the situation in Burma eased up, the United States moved its Tenth Air Force into China and made Lieutenant General G. E. Stratemeyer, U.S. Army, commanding general of Army Air Forces in the China theater, which command included both

Pacific. In the vast Pacific Theater attention at the beginning of the year was centered on the campaign in the Philippines, where the forces of General of the Army Douglas MacArthur were well established on the islands of Leyte and Samar and where a force of two regiments, landing without opposition, was set up on Mindoro.

On Jan. 9, the Sixth U. S. Army, Gen. Walter Krueger commanding, composed of the I and XIV Corps, under Maj. Gen. Innis P. Swift and Lt. Gen. Oscar W. Griswold, respectively, landed on the beaches of Lingayen Gulf on the island of Luzon. The Eighth Army under Lt. Gen. Robert L. Eichelberger having taken over the battle on Leyte, the Sixth Army had been quickly assembled and had sailed through the Mindanao and Sulu Seas and up the west coast of Luzon to catch the Japanese defenders unprepared and off balance, because of diversionary feints made concertedly by Philippine guerrilla forces and by elements of the Far Eastern Air Force under Gen. G. C. Kenney.

The Luzon Attack Force totalled more than 850 ships under the command of Vice Adm. Thomas C. Kinkaid, and was divided into the Lingayen Attack Force, under Vice Adm. Theodore S. Wilkinson, which landed the XIV Corps, and the San Fabian Attack Force, under Vice Adm. David E. Barbey, which landed the I Corps, a reinforcement group under Rear Adm. Richard L. Conolly, a fire support and bombardment group under Vice Adm. Jesse B. Oldendorf, and surface and air covering groups under Rear Adm. Russell S. Berkey and Rear Adm. C. T. Durgin.

Immediately the Sixth Army Forces, their beachhead established and flank protected, struck out for Manila. Meanwhile the XI Corps, under Lt. Gen. C. P. Hall, landed near Subic Bay, also taking the Japanese by surprise, and moved across the neck of land denying them entry to the Bataan peninsula. Two days later the 11th Airborne Division was landed from ships at Nasugbu south of Manila, one regiment moving immediately to Gagaytay ridge overlooking Cavite. From the northeast the First Cavalry Division approached the

STRATEGIC MAP OF THE PACIFIC ISLANDS

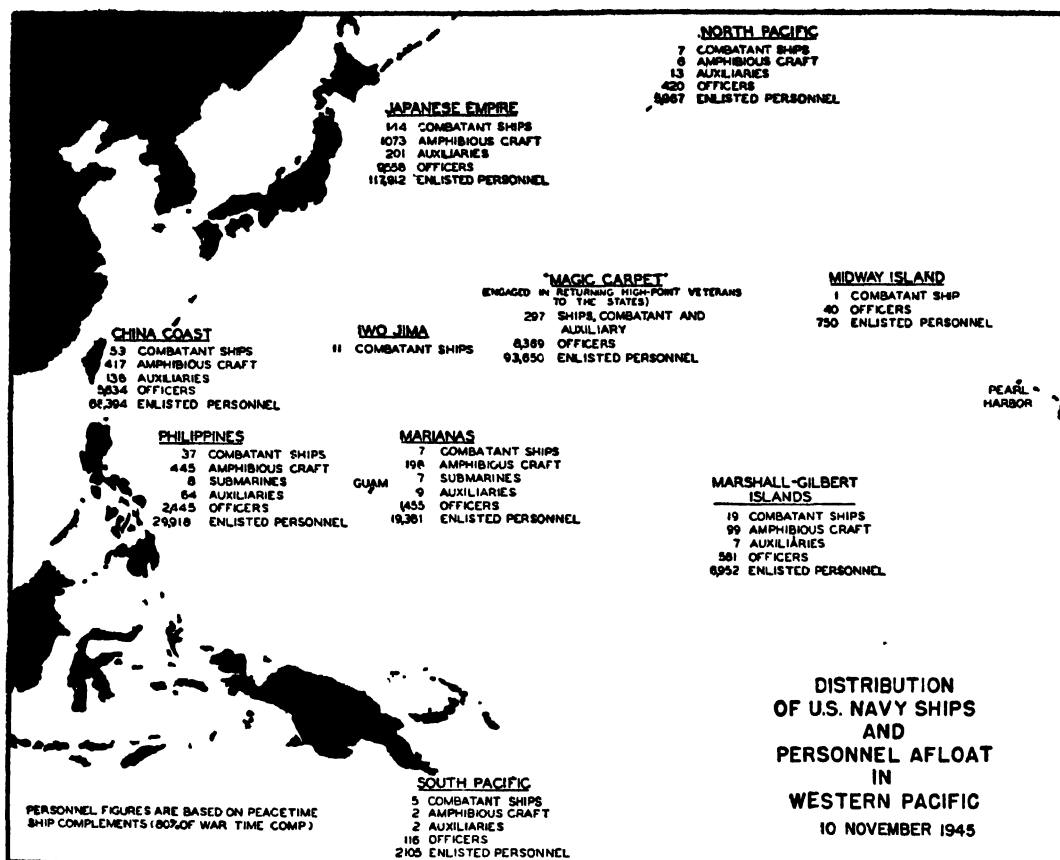

(N. Y. Times)

outskirts of Manila on Feb. 3. Three days later men from the airborne units were at Nichols Field. The net tightened; Sixth Army troops beat at the gates of Manila from every direction, while the Japanese organized a bitter defense for the city, 20,000 naval troops converting it into a fortress. After bloody house-to-house fighting, with the Japanese destroying much of the city, organized resistance was declared at an end on Feb. 23 and Manila was again in American hands.

While this fighting was in progress, another fierce struggle was under way for the possession of Corregidor, the key to Manila Harbor. Here the Far Eastern Air Force had pounded heavily in preparation for the landing, on Feb. 16, of the 503d Parachute Regiment from the air while the 34th Infantry Regiment came ashore on the rock from assault boats. The battle on Corregidor lasted for two weeks until the remaining Japanese, holed out in the underground passages, blew themselves up. It is estimated that 4,215 Japanese were killed in the fighting and an unknown number blown up. Of the American force of 3,038, only 136 were killed, eight missing, and 531 wounded. These operations made possible the opening of Manila Bay.

During this period forces of the U. S. Pacific Fleet were busy neutralizing such Japanese installations as might have offered interference with the operation. The Third Fleet, under Adm. William F. Halsey, U. S. N., and a fast carrier task force under Vice Adm. John S. McCain, U. S. N., launched air attacks against Formosa, the southern Nansei Shoto, and upon Luzon itself prior to the landings, while on Jan. 9, the day of the landing, the Third Fleet fast carrier task force hit Formosa air bases, cutting down enemy opposition from that point and at the same time sinking 15 Japanese ships and damaging 58 others.

Continuing its work, U. S. Pacific Fleet forces struck shipping and other targets along the French Indo-China coast on Jan. 11 sinking 41 ships, damaging 28, destroying and damaging a total of 162 airplanes, and smashing docks, oil tanks, and refineries in the Camranh Bay and Saigon areas. Hong Kong, Canton, Hainan, Amoy, Swatow, and other key points subsequently were struck at will by the Third Fleet. During this sweep of 3,800 miles U. S. Fleet vessels suffered no battle damage, and no Japanese aircraft was able to get within 20 miles of the fast carrier task force.

FLEET FORCES IN THE PACIFIC

At the end of February, a force of cruisers and destroyers under Rear Adm. R. S. Riggs bombarded Puerto Princesa on Palawan, following which elements of the 41st Division of the Eighth Army made an unopposed landing, taking two airstrips which provided control of a considerable area of the China sea on the Japanese route to Malaysia and Burma.

Throughout this period the Eleventh Air Force, Fleet Air Wing Four, and other elements of the North Pacific Force under Vice Adm. Frank Jack Fletcher, U. S. N., were beating at Japan's northern Kurile Islands with rockets, aerial bombs, and naval gunfire. Flights even penetrated the Sea of Okhotsk to bomb and strafe garrisons on Araidō and along Kakumabetsu Bay on Paramushiro's west coast.

On Feb. 19 the V Amphibious Corps, under Maj. Gen. Harry Schmidt, U. S. Marine Corps, supported by the Fifth Fleet under Adm. R. A. Spruance, stormed the beaches on the little island of Iwo Jima, opening one of the toughest and most costly of battles up to that time. Possession of this island was considered necessary for the prosecution of the war because of the great value it would be in pushing the B-29 attacks against the Japanese mainland. Iwo Jima would neutralize the Japanese naval and air bases at Chichi Jima and Haha Jima, from whence aerial attacks were being launched against U. S. B-29 bases in the Marianas. Furthermore, while not large enough for a main B-29 base, it would afford a haven for crippled or battle-weary Superfortresses on the return trip from Japan and

would enable fighter planes to accompany the big bombers on the final lap of their voyage. Also it put U. S. rocket-firing fighters and medium bombers within range of industrial centers in Japan.

First to go ashore were the 4th and 5th U. S. Marine Divisions, under Maj. Gen. Clifton B. Cates and Maj. Gen. Keller E. Rockey, respectively. On the third day the 3d Marine Division, under Maj. Gen. G. B. Erskine, moved into the line. The pre-invasion assault by a huge naval force under Rear Adm. W. H. P. Blandy, and by aerial bombardment from land-based aircraft, had destroyed some of the island's defenses, coast defense guns, anti-aircraft guns, covered artillery emplacements, blockhouses, pillboxes, etc. Nevertheless, so well fortified had been the island that its defenses inland appeared largely intact. Motoyama Airfield No. 1 was captured Feb. 20, the extinct volcano of Mount Suribachi was stormed and taken Feb. 23, and Motoyama Airfield No. 2 occupied on the 25th. In 27 days, from Feb. 19 to Mar. 17, our losses were 4,189 killed and 15,749 wounded, while according to U. S. figures the Japanese lost 21,000 killed and 1,259 prisoners.

On Mar. 14, while the remaining Japanese forces in the northern part of the island were still being cleaned out, the American flag was officially raised over the island and a proclamation issued by Fleet Adm. Chester W. Nimitz, U. S. N., was read, suspending all powers of government of the Japanese Empire on the island. Maj. Gen. James E. Chaney, U. S. Army, was appointed Island Commander and

Brig. Gen. Ernest M. Moore, commanding general of the VII Fighter Command of the Seventh Air Force, was assigned as commander of the aircraft of all services based on Iwo.

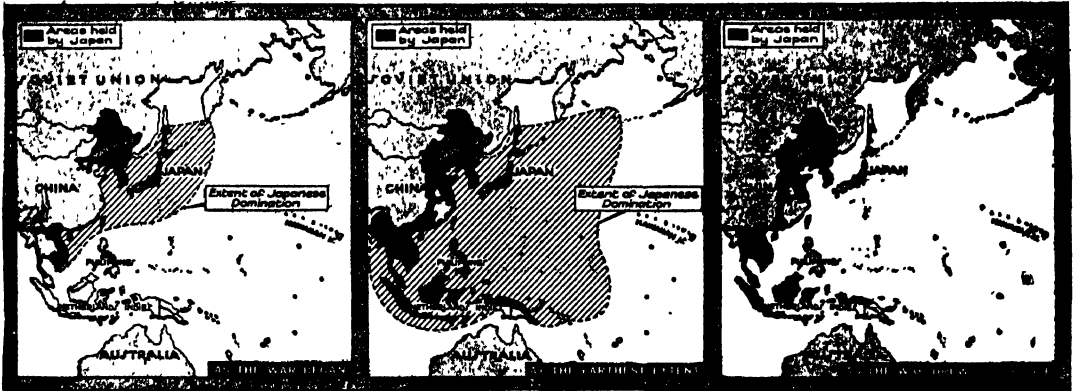

By the end of the war approximately 3,000 B-29's had landed on Iwo Jima, without which haven many of the big bombers and their valuable trained crews would have been lost.

Simultaneously with the pre-invasion attack on Iwo carrier aircraft of the U. S. Fifth Fleet were attacking Tokyo, giving strategic cover to the operations against the island. The attack, highly successful, was carried on for two days, during which 322 Japanese aircraft were shot down and 177 destroyed on the ground, while the U. S. fleet lost 49. Vessels were sunk in the harbor, installations at airfields destroyed, and the Ota aircraft factory and the Musashine Tama and Tachigawa engine plants struck. On Feb. 25 a fast carrier task force under Vice Adm. Marc A. Mitscher hammered at the Tokyo area again, destroying 158 airplanes and five small vessels against the loss of nine fighter planes.

On Apr. 1 the great amphibious assault on the Japanese island of Okinawa in the Ryukyus opened. Planning for this operation was carried on concurrently with that for Iwo Jima, the dates being so close together. As in the case of Iwo Jima the over-all direction was in the hands of Fleet Adm. Chester W. Nimitz, Commander in Chief U. S. Pacific Fleet and Pacific Ocean Areas, with Adm. Raymond A. Spruance, commander of the Fifth Fleet, as officer in command, and Adm. R. K. Turner, commander of Amphibious Forces Pacific, in command of the Joint Expeditionary Force.

It was the largest amphibious operation up to that time in the Pacific, both as to numbers of troops and numbers of ships. Altogether there were employed about 1,400 vessels, from battleships down to small landing craft. These were used directly in the capture of Okinawa and do not include those of the Fifth Fleet which were keeping other Japanese under attack to prevent interference with the operations.

The landing force was the newly organized Tenth U. S. Army under command of Lt. Gen. Simon

THE RISE AND FALL OF JAPAN'S EMPIRE OF CONQUEST

(N. Y. Times)

Meanwhile, in the Philippines General MacArthur's forces continued to take territory from the Japanese. Troops of the 41st Division landed on Mindanao on Mar. 10 and took the city of Zamboanga, starting a struggle that lasted for many weeks. Also during March troops were landed on Panay, Cebu, and Negros, while on Luzon, although the central portion was securely in U. S. hands, heavy fighting continued in the mountain ranges between Baguio and Balete Pass.

A British task force under Vice Adm. Sir Bernard Rawlings, with aircraft carriers commanded by Rear Adm. Sir Philip Vian, made a strike, late in March, against the Sakashima Islands in the Nansei Archipelago which stretches some 600 miles between Formosa and Japan. These Islands are about 200 miles south of the Okinawa group which had been the target of repeated attacks by the U. S. Fleet a week earlier.

On the 19th and 20th of March Adm. Mitscher's fleet struck the Japanese Fleet at its home bases in the Inland Sea with dire results. More than 475 Japanese airplanes were destroyed, six freighters sunk, and damage inflicted on one or two battleships, two of three aircraft carriers, two light carriers, two escort carriers, one heavy cruiser, one light cruiser, four destroyers, one submarine, one destroyer escort, and seven freighters. In addition a large number of installations including hangars, shops, arsenals, and oil storage facilities were destroyed.

Bolivar Buckner, Jr., U. S. Army, and composed of Army, Navy, and Marine Corps personnel. Main components of the Tenth Army were the XXIV Army Corps and the III Amphibious Marine Corps, which included the 7th, 27th, 77th, and 99th Infantry Divisions of the Army, and the 1st, 2d, and 6th Marine Divisions, with strong air forces attached. Altogether the Tenth Army approximated 200,000 fighting men.

Beginning Mar. 19 and continuing until the 23d, the Fifth Fleet, with a fast carrier force, covered other bases in the Ryukyu Islands, Kyushu, and the Inland Sea, hitting at Japanese naval and air bases from which they might oppose the Okinawa operations. Next a methodical naval shelling and air bombardment of Okinawa was undertaken to "soften it up" for the landing. On the 26th of March the 77th Division was put ashore on Kerama Retto, 20 miles west of the southern end of Okinawa. A defending force of about 900 Japanese was quickly overcome and squadrons of Marine Corps fighter planes were brought to air fields on the island from whence they could cover the Okinawa landing. The Kerama Retto also served as a naval anchorage. On Mar. 30 units of the 77th Division took Keise Shima where the 420th Field Artillery Group, equipped with 155-mm guns, was employed to support the invasion.

At 8:30 A.M. Apr. 1 the troops went ashore in the bay on the west side of the island just north of Naha, the principal city. They landed abreast along

an eight-mile stretch of beach with the Marine Corps to the north and the Army to the south. There was little initial resistance so that by noon both the Kadena and Yontan airfields had been taken. By the end of the day about 50,000 troops had landed, with large amounts of artillery and tanks.

The Japanese commander, Lt. Gen. Ushijima, with a combat force of about 70,000 men at his disposal, and more than 500 artillery guns of 75-mm or greater in caliber, wisely decided not to give major resistance to the landings, but to concentrate most of his effective force in the southern portion of the island, in such a position that there would be no suitable shores for landings behind them. The island was superbly fortified, with gun emplacements and with caves connected by intercommunicating tunnels. Heavy guns were shot from the mouths of the caves and then withdrawn. The effectiveness of their fire indicated that the defending troops were well trained and seasoned.

After landing, the Marine Corps turned north and the Army corps south. The large north end of the island, not being so strongly held, was rapidly cleaned up by the Marines. This phase of the campaign while swift (it was completed by Apr. 21) was marked by long, fast marches over rocky mountains, and difficult fighting against the Japanese entrenched in the mountain range of the Motobu peninsula.

On May 1 the 1st Marine Division was moved into the line in the south, where fighting had been at a high pitch and progress very slow against formidable Japanese strongholds. Early in May the Japanese launched a determined counterattack accompanied by two amphibious attacks of about 2,000 men each on the flanks of the American line. Meanwhile Gen. Buckner shifted the divisions in his line so that when the Japanese struck they found two fresh divisions (the 1st Marine and 96th Infantry) facing them. The counterattack failed, the amphibious forces being met by amphibious tanks and naval fire, those reaching the shore being killed, while massed artillery and tanks inflicted severe casualties on the Japanese 24th Division and 44th Independent Mixed Brigade. The United States forces reported losses of about 2,000 men.

Following this battle the 6th Marine Division was brought south and put into the line. Four Divisions now faced the remaining elements of the Japanese 32d Army along the six mile Shuri front. On May 13 the 96th Infantry Division took the crest of Conical Hill and opened a path to the south to outflank Shuri. Through this corridor Gen. Buckner sent the 7th Infantry Division, which promptly overran Yonabaru. A movement west behind Shuri and Naha would have trapped the Shuri defenders, but just at this time a terrific wind and rain storm blew up, churning the earth into a sea of mud and bogging down all heavy equipment and transportation, so that it took the utmost efforts of the engineers to keep even the most vital traffic moving. Supplies were brought in by sea and by air drop because of the condition of the ground. Taking advantage of this situation, the Japanese, having failed in a counter attack against the west of the line, withdrew from the untenable Shuri position.

The weather improved in June, permitting armored vehicles to move so that the attack was renewed all along the line. Caves were reduced with flame-throwing tanks and dynamite squads. On June 19 elements of the Marine Corps reached the southern coast of the island while the 7th Infantry Division captured the command post of the Japanese 32d Army. On June 22 the Island was de-

clared secured, although small groups of Japanese continued to fight for some time.

Gen. Buckner did not live to see the ultimate victory, for on June 18, while forward with the assault infantry, he was killed by artillery fire. Maj. Gen. Roy S. Geiger, U.S.M.C., took over command of the ground forces on the island until the arrival of Gen. Joseph W. Stilwell, U. S. Army, who assumed command of the Tenth Army and the Ryukyu Forces on June 23.

While the ground fighting had been in progress the supporting naval forces were the targets of determined attacks from Japanese suicide boats and particularly Kamikaze planes. Between the first Japanese air attack on Mar. 24 and the conclusion of organized resistance on the Island, 223 naval vessels of all types had been hit by air attack, most of them by the Kamikazes. In the list of vessels damaged there were ten battleships, eight aircraft carriers, two light aircraft carriers, three escort carriers, three heavy cruisers, two light cruisers, and 67 destroyers. A total of 30 vessels were sunk, the largest in the regular combatant classes being 12 destroyers. Hardest hit were the destroyers and small vessels stationed in a picket line far enough out to give the main body of heavy ships warning of the approach of Japanese planes. While they suffered heavy losses, these picket boats undoubtedly lessened the severity of the attacks upon the other vessels.

The Japanese lost 3,836 airplanes shot down during the campaign and 800 destroyed on the ground.

According to United States figures the Japanese lost 107,539 killed and 7,401 taken prisoners. Of the U.S. Army troops engaged 4,549 were killed, 18,010 wounded, and 95 missing. The Marines lost 2,734 killed, 13,388 wounded, and 143 missing. Losses at sea because of air attacks, mines, torpedoes, etc., totalled 4,907 killed and missing and 4,824 wounded. In addition to these battle casualties the Army suffered 21,592 non-battle casualties and the Marine Corps 10,881. These non-battle casualties include injuries, combat fatigue, etc.

Meanwhile, the surrender of Germany on May 8 had freed for possible deployment to the Pacific Theater a total of about 4,500,000 Allied soldiers. How many of these would be sent against her Japan had no way of knowing.

The operation of the very heavy bombers (B-29 Superfortresses) against Japan was steadily growing. On Mar. 10 a campaign of heavy incendiary bombing was started. On May 31 the War Department announced a list of 43 specific war industry factories in Tokyo, Nagoya, Osaka, and Kobe which had been attacked. In addition hundreds of small plants had been hit, dockyards shattered and transportation centers bombed. Between Mar. 1 and May 30 B-29's had dropped approximately 58,000 tons of bombs on Japanese targets. An estimate based on analysis of photographs indicates the following urban areas destroyed:

Tokyo	51.3 square miles
Nagoya.....	11.3 square miles
Kobe.....	3 0 square miles
Osaka	8.1 square miles

In the latter part of May and early June operations were conducted against Borneo to deny the Japanese access to their conquered territories in the Netherlands East Indies. A Borneo attack force, composed of Australian and American vessels, under command of Vice Adm. D. E. Barbey, U.S.N., conducted the operations, with the 9th Australian Division providing the landing force. Landings

were made on the island of Tarakan and at Brunei Bay in northwest Borneo. On Borneo the Australians proceeded south to the oilfields at Seria and Miri. Air and naval facilities were provided at Brunei Bay giving the Allies even greater coverage of the Asiatic coast from Singapore to Shanghai.

In the Philippines, the forces of General MacArthur had been steadily driving the Japanese into corners. On Luzon the 37th Division had gone north from Balete Pass into the Cagayan Valley. On June 21 Aparri was taken by guerrilla forces assisted by Sixth Army Rangers. Two days later the 11th Airborne Division dropped a force south of Aparri, which, within three days, had joined the forward elements of the 37th Division. On June 28 General MacArthur announced that all Luzon had been liberated.

Meeting at Potsdam, representatives of the United States, Great Britain, and China on July 26 issued an ultimatum calling upon Japan for unconditional surrender, failing in which, they said she would face "utter destruction."

As if in fulfillment of this threat the first atomic bomb to be used in combat was dropped on the city of Hiroshima on Aug. 6. Sixty percent of the city was destroyed. On Aug. 8 the Soviet Union declared war on Japan and moved across the border into Manchuria. On Aug. 9 the second atomic bomb was loosed on Nagasaki. The next day the Japanese Government announced it would accept the Potsdam terms providing that they would not be construed to "comprise any demand which prejudices the prerogatives of His Majesty as a Sovereign Ruler." This was what the Allies had hoped for, for

through the Emperor they believed they could control and disarm the large bodies of Japanese troops on the Asiatic mainland and outlying islands. They replied, therefore, that "from the moment of surrender the authority of the Emperor and the Japanese Government to rule the state shall be subject to the Supreme Allied Commander who shall take such steps as he deems proper to effectuate the surrender terms." On Aug. 14 the Japanese announced acceptance of the Potsdam Declaration in an Imperial Rescript, in which it was stated that "the enemy has begun to employ a new and most cruel bomb, the power of which to do damage is indeed incalculable, taking the toll of many innocent lives. Should we continue to fight, it would not only result in an ultimate collapse and obliteration of the Japanese Nation, but also it would lead to the total extinction of human civilization."

General Douglas MacArthur, U.S. Army, was appointed Supreme Commander for the Allied Powers and conducted the arrangements for the formal surrender ceremonies which were held on board the United States Battleship *Missouri* in Tokyo harbor Sept. 2. In accordance with the terms the Emperor of Japan issued a proclamation instructing his subjects to cease hostilities, lay down their arms, and carry out the provisions of the surrender document. In obedience to these instructions bodies of Japanese troops in China, Formosa, Manchuria, and many islands in the Pacific ceased fighting and submitted to the directions of Allied Commanders.

The Order of Battle for U. S. Army Forces in the Pacific, as of August 14, as given in the report of General of the Army Marshall follows:

Unit	Commander	Location
General Headquarters, U. S. Army Forces in the Pacific.	General of the Army Douglas MacArthur	Manila, Luzon, Philippine Islands.
Sixth Army	Gen. Walter Krueger	Luzon, Philippine Islands.
40th Infantry Division	Brig. Gen. D. J. Myers	Panay, Philippine Islands.
11th Airborne Division	Maj. Gen. J. M. Swing	Luzon, Philippine Islands.
I Corps	Maj. Gen. I. P. Swift	Luzon, Philippine Islands.
26th Infantry Division	Maj. Gen. C. L. Mullins	Luzon, Philippine Islands.
33d Infantry Division	Maj. Gen. P. W. Clarkson	Luzon, Philippine Islands.
41st Infantry Division	Maj. Gen. J. A. Doe	Mindanao, Philippine Islands.
IX Corps	Maj. Gen. C. W. Ryder	Leyte, Philippine Islands.
77th Infantry Division	Maj. Gen. A. D. Bruce	Cebu, Philippine Islands.
81st Infantry Division	Maj. Gen. P. J. Mueller	Leyte, Philippine Islands.
XI Corps	Lt. Gen. C. P. Hall	Luzon, Philippine Islands.
43d Infantry Division	Maj. Gen. L. F. Wing	Luzon, Philippine Islands.
American Infantry Division	Maj. Gen. W. H. Arnold	Cebu, Philippine Islands.
1st Cavalry Division	Maj. Gen. W. C. Chase	Luzon, Philippine Islands.
Eighth Army	Lt. Gen. R. L. Eichelberger	Leyte, Philippine Islands.
93d Infantry Division	Maj. Gen. H. H. Johnson	Morotai Island, New Guinea, and Philippine Islands.
96th Infantry Division	Maj. Gen. James L. Bradley	Okinawa, Ryukyus Islands, and Mindanao, Philippine Islands.
X Corps	Maj. Gen. F. C. Sibert	Mindanao, Philippine Islands.
24th Infantry Division	Maj. Gen. R. B. Woodruff	Mindanao, Philippine Islands.
31st Infantry Division	Maj. Gen. C. A. Martin	Mindanao, Philippine Islands.
XIV Corps	Lt. Gen. O. W. Griswold	Luzon, Philippine Islands.
6th Infantry Division	Maj. Gen. C. E. Hurdie	Luzon, Philippine Islands.
32d Infantry Division	Maj. Gen. W. H. Gill	Luzon, Philippine Islands.
37th Infantry Division	Maj. Gen. R. S. Beightler	Luzon, Philippine Islands.
38th Infantry Division	Maj. Gen. F. A. Irving	Luzon, Philippine Islands.
Tenth Army	Gen. J. W. Stilwell	Okinawa, Ryukyus Islands.
XXIV Corps	Lt. Gen. J. R. Hodge	Okinawa, Ryukyus Islands.
7th Infantry Division	Maj. Gen. A. V. Arnold	Okinawa, Ryukyus Islands.
27th Infantry Division	Maj. Gen. G. W. Griner, Jr.	Ie Shima and Okinawa, Ryukyus Islands.
U. S. Army Forces, Middle Pacific	Lt. Gen. R. C. Richardson, Jr.	Oahu, Hawaiian Islands.
98th Infantry Division	Maj. Gen. A. M. Harper	Oahu, Hawaiian Islands.
U. S. Army Forces, Western Pacific	Lt. Gen. W. D. Styer	Luzon, Philippine Islands.
Far East Air Forces	Gen. G. C. Kenney	Okinawa, Ryukyus Islands.
Fifth Air Force	Lt. Gen. E. C. Whitehead	Okinawa, Ryukyus Islands.
Seventh Air Force	Brig. Gen. T. D. White	Saipan, Marianas Islands.
Thirteenth Air Force	Maj. Gen. P. B. Wurtsmith	Leyte, Philippine Islands.

ORDER OF BATTLE U. S. ARMY STRATEGIC AIR FORCES (AS OF 14 AUGUST 1945)

Headquarters, U. S. Army Strategic Air Forces, Guam, Marianas Islands:	
Commanding General	Gen. Carl Spaatz.
Deputy Commander	Lt. Gen. B. McK. Giles.
Chief of Staff	Maj. Gen. C. E. LeMay.
Eighth Air Force, Okinawa, Ryukyus Islands:	
Commanding General	Lt. Gen. James H. Doolittle.
Twentieth Air Force, Guam, Marianas Islands:	
Commanding General	Lt. Gen. Nathan F. Twining.

Occupation of Japan. From headquarters in Tokyo, General MacArthur set about the task of fulfilling the assignment given to him—to establish a peaceful and responsible government, preferably democratic, in Japan and to see to it that she will not again be a threat to the United States or to the peace of the world.

His task apparently was simplified by the co-operation of the Emperor and the people of Japan, many of whom seemed to welcome him and the regime he represented. One of his first moves was to order the closing of her foreign ministry and her embassies and consulates in other countries.

The Eighth Army, under Lt. Gen. Eichelberger, with added units including those from the Marine Corps, occupied the principal points of the Japanese main islands, while naval detachments and vessels took control of the harbors. In effecting the military occupation there was no opposition and no disorder.

The U. S. forces were required to destroy Japanese fortifications, to maintain law and order, and to dispose of great quantities of Japanese property in the home islands, some of which must be destroyed, some salvaged, and some shipped to the United States and her Allies.

On September 1 the Joint Chiefs of Staff instructed General MacArthur to bring to trial, before appropriate military tribunals, such Japanese war criminals "as have been or may be apprehended." Under this directive the military forces began rounding up Japanese leaders whom they believed guilty of bringing on the war or of condoning atrocities, and arranged for their trial.

LEROY WHITMAN.

YACHTING. Some of the salt of sailing experience was removed from the log of yacht racing last summer when a 17-year-old skipper from San Diego carried off top honors in the world Star Class championships, the most colorful event in the sport last year. Competing against the best skippers in his class, Malin Burnham, tow-headed high school boy, amassed 87 points in the series held off Stamford, Conn., to defeat James Cowie of the Pacific Coast fleet by a margin of only two points. Young Burnham clinched the title with a victory in the final race.

Other leading Star Class sailors during the year were Adrian Iselin 2d of Southern Long Island Sound, who won Atlantic Coast laurels with his Ace, and Horace Havemeyer, who took the Corry Trophy with the Gull. George R. Barnes of Skaneateles, N.Y., was national ruler of the Lightning Class, Joseph Bartlett of Margate City, N.J., was best of the Comet skippers and F. R. Ford led the Atlantics.

Champions of the Long Island Sound Y.R.A. were as follows: International, Cornelius Shields (Aileen); Class S, W. S. Chesley, Jr. (Auley); Atlantic, G. R. Hinman (Sagola); Star, W. P. O'Gorman (Wahim); Victory, R. W. Fraser (Black Jack); Handicap, Division V, S. E. Kay (Valkyrie); Handicap, Division VI, C. W. Reynolds (Decibel); Handicap, Division VII, C. J. Biensstock (Patricia); One-Ten, H. G. Herbert (Hurricane); Comet, W. E. Baltz (Blue Peter).

Larchmont Race Week, always among the leading attractions on the Sound, drew big fleets as did the majority of other regattas on 1945's log. A number of distance races came back in the wake of peace, the biggest of the season being the Riverside Yacht Club's overnight run around Stratford Shoal, with a record fleet of 69 going to the starting line for the 50-mile thrash. The Commodore

Pierce Trophy, major prize for the event, was won by E. L. Raymond's ketch, Chanteyman, as 20 of the craft finished.

Competition for big craft returned to England when fifteen yachts ranging from three to forty-two tons sailed in the first test held off Cowes since 1939. C. E. Donne's Content captured first place in the event. The most coveted trophy of Bahamas racing, the King George V Cup, was won by the veteran Oswald Mosley, who sailed his famous Pirate Class Corsair to triumph in the Royal Nassau Sailing Club series.

THOMAS V. HANEY.

YAP. An island cluster in the western Caroline group of the Japanese Pacific Islands (q.v.); surrendered by Japan to Allied armed forces in 1945. It comprises three main islands within a lagoon formed by an outer band of islets. Area, 83 square miles. Population (1938), 6,939 (5,811 natives, 1,119 Japanese, and 9 others).

YUGOSLAVIA. A Balkan republic (proclaimed Nov. 29, 1945, and recognized by Great Britain and the United States on Dec. 22, 1945), formerly a kingdom. Area: 95,753 square miles. Population (Jan. 1, 1941, estimate): 15,920,000 (13,934,000 at the 1931 census). Chief cities (with 1931 census figures): Belgrade (capital) 266,849, Zagreb 185,581, Subotica 100,058, Ljubljana 79,056, Sarajevo 78,173, Skopljje 64,737, Novi Sad 63,985.

Religion and Education. According to the 1931 census, members of the Serbian Orthodox Church comprised 48.7 percent of the total population, Roman Catholics 37.45, Moslems 11.2, Protestants 1.66, Jews 0.49, and Greek Catholics 0.32 percent. Education (1938-39): 1,474,224 students in elementary schools, 177,034 students in secondary schools, and 16,969 students in the universities.

Production. Agriculture, in normal times, was the occupation of 80 percent of the people, and about 80 percent of the cultivated area was devoted to cereals. (For statistics of production see YEAR BOOK for 1943, page 754). Minerals produced include coal, iron, copper, gold, lead, chrome, antimony, and cement. There were 3,054 industrial enterprises in 1938 and their employees numbered about 400,000 in 1940. Leading industries included timber, textiles, milling, tanning, cement, leather goods, chemicals, steel, brewing, and sugar refining.

Foreign Trade. The value of merchandise imports in 1940 was 6,019,000,000 dinars; exports, 6,680,400,000 dinars. For distribution and character of 1939 trade, see YEAR BOOK for 1940.

Finance. Budget expenditure authorized for the 1940-41 fiscal year (ended March 31) was 14,708,200,000 dinars, as against actual expenditures of 12,327,900,000 dinars in 1939-40. Public debt on Mar. 31, 1939, 24,620,000,000 dinars (internal, 12,620,000,000; external, 12,000,000,000). On Mar. 31, 1941, currency in circulation totaled 15,281 million dinars. The average exchange rate of the dinar was \$0.0227 in 1939, \$0.0225 in 1940.

Transportation. There were 6,591 miles of railway in 1939 (6,000 miles operated by the state). Highways extended 26,534 miles. The Danube and other rivers are important traffic arteries.

Government. The Constitution of Sept. 3, 1931, proclaimed Yugoslavia a hereditary, constitutional monarchy. It vested executive power in the King, acting through a Ministry appointed by him and not responsible to Parliament. Legislative power was shared by the King and Parliament. There was a Senate of 84 members, half elected and half appointed by the Crown for terms of six years. The

Lower Chamber (Skupština) of 371 elective members was dissolved Aug. 28, 1939, and new elections were held in November 1945. The Constituent Assembly meeting in Belgrade on Nov. 29, 1945, proclaimed Yugoslavia a republic. Premier: Marshal Josip Broz (Tito).

Events, 1945. Yugoslavia commenced 1945 with the Partisans in control of a strong military force, a vigorous de facto government at Belgrade, determined leadership, and the support of the Allies. Towards the end of the year the de facto government succeeded in carrying out national elections, whereby it constituted itself the legal government, which then proclaimed Yugoslavia a democracy and denounced the claims of King Peter and the House of Karageorgevich. At the end of 1944 an agreement had been reached by which Tito's Partisan regime and the King's government headed by Subasich would cooperate, with a Regency to act for the King. The King continued to act under the advice of influential Yugoslav circles outside the country who were hostile to the Partisan regime and also of certain British interests who were concerned with preserving the monarchy in Yugoslavia, and in January insisted that he himself appoint the Regents, or, alternatively, that a combined Tito-Subasich government hold the powers of the Regency. Prime Minister Churchill publicly admonished Peter not to delay the march of events, and Peter's obduracy was welcomed by the Partisans themselves on the ground that it damaged his cause. On January 29 Peter reappointed Subasich Prime Minister, though he had declared two days before that he had no confidence in him, but the Regency remained unsettled, Tito flatly rejecting Peter's candidates.

On February 4 and 5 the Partisan government in Belgrade issued a series of decrees which made it clear they intended to proceed with the legal and constitutional reorganization of Yugoslavia without reference to the state of their relations with the Government-in-exile. These decrees provided for the establishment of a National Supreme Court and the office of Attorney-General, but also, and more significantly, abrogated all laws and decrees which conflicted with those of the National Liberation Provisional Government. Negotiations for the implementation of the Tito-Subasich agreement of November 2, 1944, continued despite the King's obduracy, and on March 5 Regents acceptable to Tito were sworn in. On the following day both Dr. Subasich offered his resignation to the Regency Council and Tito offered the resignation of the National Committee of Liberation to the presidium of the Antifascist Council of National Liberation of Yugoslavia (AVNOJ). On March 7 the Provisional Government of Democratic Federative Yugoslavia, composed of members of the former Subasich Cabinet and of officials of the Partisan regime, was inaugurated in Belgrade. Tito became Prime Minister and Subasich Foreign Minister. Milan Grol, leader of the Democratic Party of Serbia, who had been rejected by Tito as Regent, was named one of two deputy Prime Ministers, and Yuray Shutey, previously considered to be personally and politically unacceptable to the Partisans, was made Minister without Portfolio. About two-thirds of the government of 26 was composed of non-Communists, but the important posts of Prime Minister and Minister of War were held by Tito, and the Communist leader Edvard Kardelj held the posts of Deputy Prime Minister and Minister for the Constituent Assembly. In a speech to the nation Tito declared that the Provisional Government would remain in office until the

completion of the duties of a constituent assembly, which would be elected by universal suffrage and secret ballot. It was not expected, and events proved, that the institution of the provisional government with the cooperation of ministers of the Government-in-exile would cause the Partisan administration to deviate from the plans which it was following and which had the approval of the Allies. Shortly after the formation of the provisional government, British Ambassador Stevenson, U.S. Ambassador Patterson, and U.S.S.R. Ambassador Sadchikov arrived in Belgrade; formal recognition by the powers was considered unnecessary, as the regime was inducted by a Regency council which represented a constitutional continuation of the previous regime.

During April the provisional governments of Yugoslavia's six federal units were crystallizing into permanent form. The principle of the central government was that each unit should have full autonomous rights but that no separatism would be brooked. In Serbia Dr. Blagoje Neshkovich (Communist) became Prime Minister of ASNOS (Antifascist Association of National Liberation of Serbia). At its first session on April 7 it was decided that the Sandjak be divided between Serbia and Montenegro, that Vojvodina be included with Serbia in a semi-autonomous status, and that Kosovo-Metohiya be joined to Serbia without qualification. In Croatia ZAVNOH (Regional Antifascist Council of National Liberation of Croatia) was formed at Split on April 14, with Dr. Vladimir Bakarich (Communist) as Prime Minister. For Macedonia Lazar Kulishevski (Communist) became Prime Minister of ASNOM (Antifascist Association of National Liberation of Macedonia) on April 15. On the same day the Antifascist Association of National Liberation of Montenegro and Boka elected a new presidium, which created a government with Dr. Blazho Yovanovich as Prime Minister. The National Government of Slovenia was formed at Aidovshchina in Venezia Giulia on May 5 by SNOS (Slovenian National Liberation Council), with Boris Kidrich (Communist) as Prime Minister. The new Government of Bosnia-Herzegovina was formed at Sarajevo on April 28 with Rodolyub Cholakovich (Communist) as Prime Minister.

During the spring, serious disputes with Britain arose over the occupation of Venezia Giulia and Carinthia. At the end of February Field Marshal Alexander, visiting Tito, reaffirmed that pre-1939 Venezia Giulia would be under the control of the Allied Military Government, but without prejudice to Yugoslavia's claims at the Peace Conference. On May 2, Lieut. Gen. Freyberg of the New Zealand 2nd Division accepted the surrender of the German garrison at Trieste. Yugoslav GHQ protested, saying that they had liberated the city and had announced their entry into it in a communiqué of April 30. The crisis spread to Carinthia when the British won the race to occupy the border areas of Klagenfurt, Villach, and Tarvisio (Trbrzh) on the pre-1939 Italo-Austrian border. General Yakshich, chief of staff of the Yugoslav Fourth Army, protested. The presence of anti-Russian Polish units in the British Eighth Army increased the irritation of the Yugoslavs, and it was also alleged that 20,000 men of the remnants of Mihailovich's forces had joined the British. Yugoslav troops along with New Zealanders were in Trieste, and Yugoslav propaganda was strongly in favor of keeping the city. Marshal Alexander was equally sharp. On May 19 he said publicly: "It is . . . Marshal Tito's apparent intention to

establish his claims by force of arms. Action of this kind would be all too reminiscent of Hitler, Mussolini, and Japan. It is to prevent such actions that we have been fighting this war." After additional mutual recriminations an agreement between Yugoslav and Anglo-American representatives concerning jurisdiction over and administration of Venezia Giulia was signed at Belgrade on June 9. Tito accepted almost in their entirety the terms of his earlier verbal agreement with Marshal Alexander, and the Yugoslav press glossed over the diplomatic defeat. In the months following, the press did criticize the Allied Military Government administration of Venezia Giulia as favoring the forces of reaction.

With Russia, as with Bulgaria and Albania, Yugoslav relations continued most cordial. When Greek territorial claims on the latter two countries grew strident Yugoslav propaganda joined theirs in denouncing the irresponsible "monarchofascist" regime in Greece, and in all such debates Yugoslavia, like the others, supported its patron Russia against Greece's patron Britain. After the inauguration of the Labor government in England and particularly after the installation of a more democratic regime in Greece at the end of November, tension in Yugoslav-Greek relations was relaxed. The spirit of cooperation among the non-Greek Balkan peoples, which was regarded as envisaging an ultimate Balkan federation under Russian patronage, is illustrated by the amicable cession of the Kosovo region, to which Albania had strong claims, to Yugoslavia, and by the cooperation of the two states in administering border regions. On April 5, Tito and an entourage of ministers was welcomed by high dignitaries at Moscow, and on April 13 a new and favorable trade agreement was signed with the U.S.S.R. The Yugoslav press attacked Turkey on the ground of its unfavorable attitude towards Russia. In March, after a long series of disagreements, an understanding was reached with UNRRA, and an agreement was signed. Subsequently it was charged that UNRRA supplies were being misused for political and military ends.

Meanwhile party politics continued, the main issue being the continued existence of parties other than Communist within the framework of the Provisional government. Soon after the formation of that government Milan Grol, first Deputy Prime Minister, started a campaign for the continued independent existence of the Democratic Party, and subsequently he was supported by Yuray Shutey, Minister without Portfolio, and others. With the defeat of Germany the Partisans no longer had to fear dissidents; Grol, Shutey, Kosanovich, Smodlaka, and Prodanovich petitioned Tito to proclaim amnesty and to take measures to appease the opposition. Instead a leader like Dr. Vlatko Machek, who before the war had headed the Croatian Peasant Party and whom the Partisans had heretofore appeased, was now virtually accused as a war criminal along with Nedich, Pavelich, and Mihailovich. Evidence brought out at trials of Mihailovich followers at the end of July established beyond doubt Mihailovich's "collaboration" with Germans, Italians, and with Nedich—claimed by his adherents to have been temporary and for proper ends. In regard to the old parties and their desire for independent existence and independent representation in elections, the position of the Partisans was that the prewar leaders had no real following and their programs no substance; they were anachronistic and obstructionist. Truer democracy could be achieved by making an "umbrella" party in which individual

parties could collaborate as components. To promote this view of democracy, Partisan propaganda during the summer attacked the theory and practices of the western type of democracy, and specifically the administration of Venezia Giulia. It was expected that Grol and his associates would precipitate a crisis during the summer by resigning from the government, but they continued in it, merely making known their protests.

On August 7 the Antifascist Council of National Liberation of Yugoslavia (AVNOJ) convened in Belgrade for the third time since its inception and changed its name to the Provisional National Assembly (Skupstina) of Yugoslavia. Before November, 1942, when AVNOJ met for the first time, the Supreme Command of the National Army of Liberation and Partisan Detachments of Yugoslavia was not only the highest military authority but also the central political forum and supreme governing body. With its establishment AVNOJ took over the political and governmental functions. At its second meeting in November, 1943, at Jajce AVNOJ proclaimed itself the highest legislative and executive body, while the newly founded United National Front (which did not receive nation-wide status until August, 1945) was established as a purely political forum. The third meeting of AVNOJ was convoked in order (a) to enlarge itself in accordance with the Yalta provisions; (b) to enact necessary laws for the election of a constituent assembly, provided for by the Tito-Subasich agreement; and (c) to promulgate a series of political, social, and economic laws concerning such matters as freedom of press, civil marriage, and agrarian reform. The assembly was enlarged by 118 new deputies so that its number was about 350. The electoral law gave suffrage to all citizens of both sexes except for specified categories of persons who actively collaborated with the fascists. Elections for the local assemblies would be direct and for higher administrative units indirect, through delegates designated by each lower unit. The law on the constituent assembly provided for a bicameral parliament, composed of a Federal Skupstina and National Skupstina. The former will have one deputy for each 40,000 inhabitants, the latter 25 deputies for each federal unit regardless of population, 15 from Voivodina and 10 from Kosovo-Metohiya. Both houses will enjoy equal rights and both must approve all laws. In case of disagreement delegates from both houses will form a coordination committee, and if this committee should fail to agree new elections would be called. The Skupstina is to meet only occasionally; when it is not in session it is to be represented by a joint presidium of both houses. The agrarian law provided for the expropriation of the holdings of absentee landlords, in several categories, and their distribution to the peasants who worked them. The special privileges granted by previous governments to foreign mining companies, especially that exploiting the Bor mines, were cancelled, but their investments were not expropriated.

Milan Grol, while continuing in the government, registered disapproval of its measures and techniques. The function of the new parliament, he held, was not to initiate new laws but merely to register measures promulgated by the forces dominating the regime. But Grol and his opposition were really without a program of their own, their objections being to the techniques rather than the actual measures of the government, and during the summer and autumn the opposition parties showed signs of rapid disintegration. The Partisan election campaign was based on assertions that

what the opposition really desired was a return of the prewar fascist regime and that the great preponderance of the people were heartily in favor of the Partisan government. These assertions became more vigorous after the opposition, including Foreign Minister Ivan Subasich, Yuray Shutey, and other Croat Peasant Party representatives in the government, decided not to participate in the elections, and after a conference of Catholic Bishops at Zagreb on September 20 issued a pastoral letter attacking the regime as undemocratic. The elections of November 11, in which the National Front's candidates were returned by a sweeping majority, were at least more democratic than any that had been held in Yugoslavia since 1929. The Front's victory was due not only to its organization, discipline, and clear-cut program but also to the disintegration of its opposition. Towards the end of their campaign the Partisans launched a vigorous attack upon King Peter, and the public airing of a financial quarrel between the King and his mother was an argument to prove the costliness and unworthiness of the monarchy.

On November 28 the Skupshtina declared Yugoslavia a democracy, and thus formally disowned any allegiance to Peter and the House of Karageorgevich. The step met with approval abroad, not only on the part of Russia but also of the western Allies. On December 22, while Secretary of State Byrnes and Foreign Secretary Bevin were meeting in Moscow with Foreign Commissar Molotov, the governments of the United States and Great Britain announced their recognition of Marshal Tito's government. Acting Secretary of State Dean Acheson made it clear that this recognition did not constitute a blanket endorsement of the policies of the Partisan regime, its methods of assuming control, or its failure to implement the guarantees of personal freedom promised the Yugoslav people. However, Acheson added, in a statement addressed to Richard Patterson, formerly ambassador to King Peter's government and now accredited to the new government: "You should make it quite clear to the authorities and people of Yugoslavia that we entertain only the friendliest sentiments towards the peoples of the country and that it is our anticipation that the evolution of events will provide developments which will make possible those relations—both political and economic—between the peoples of Yugoslavia and the United States which we on our part most urgently desire to see."

ZINC. Declining mine production and imports kept zinc in short supply in relation to demand in the first half of 1945, and not until conclusion of the war with Japan was it possible to completely remove distribution and use controls.

Only through the hypodermic of the Government's premium price plan, by which mines received additional payments for extracting otherwise unprofitable ores, was domestic production bolstered to 615,927 net tons (1944: 718,642 net tons). With the plan in operation, an average price of 11.5 cents per lb. was received by producers compared to a ceiling market price of 8.25 cents per lb. and a 1939 average price of 5.12 cents per lb. If the premium price expires as scheduled June 30, 1946, much of the production of the Tri-State District (Missouri-Kansas-Oklahoma), which contributes about one-quarter of domestic supply, may be lost because of approaching exhaustion of richer grades of ore. Increased dependence will then be placed on imports, mostly in the form of ores and concentrates smelted in the United States.

Total domestic production of slab zinc, nearly all consumed in the United States, was estimated at 813,700 net tons, including primary production from both foreign and domestic ores and redistilled secondary metal. Approximately half the imports came from Mexico with large amounts from Canada and Chile. Government stocks at the end of the year were about 260,000 tons, the highest in history.

A sharp rise in the ammunition program early in the year brought requirements for brass mill products (about 30 percent zinc) to a new peak, making it necessary to put zinc back under allocation effective April 1. Although use restrictions were relaxed in May and revoked in June, brass mill requirements were still high after the end of the European war, and further distribution restrictions were invoked effective August 1. Full removal of controls came August 20. The sharp drop in brass mill consumption in the latter part of the year made galvanizing the principal use of zinc during the year by a small margin. Although these two uses accounted for over two thirds of total consumption, use of zinc for die casting was rapidly regaining its growing prewar importance as reconversion progressed.

CHARLES T. POST.

ZOOLOGY, 1942-45. During the period 1942-45, zoological activity was necessarily limited by the exigency of total war. Wherever possible, however, experiment and study continued, and considerable information, some entirely new, was recorded.

Ecology. Insects are frequently carried considerable distances in the upper air. Wellington (*Canadian Entom.*, 77, pp. 7, 21) studied experimentally the conditions governing such methods of distribution and the tolerances insects have to pressure and cold. The life history of the lugworm (*Arenicola*) of Europe and its burrows in the sand are described by Wells (*Jour. Marine Biol. Assoc. United Kingdom*, 26, p. 170).

In *The Biotic Provinces of North America* by L. R. Dice (Univ. Michigan Press, 1944), North America is divided into some 30 biological provinces, continuous geographic areas which are characterized by one or more important ecological associations. The provinces are subdivided into districts, and these again into life belts which are often discontinuous, vertical divisions.

The distribution of fresh water mussels in streams is shown by Van der Schalie (*Pap. Michigan Acad. Sci. Art. Lett.*, 30, p. 355) to offer evidence of former stream confluences.

A number of wildlife workers have cooperated in a booklet (*Missouri Conserv. Comm. Circ.*, 134) in which the thesis is developed that fertility of the soil is an important factor in animal ecology. A wide range in the weights of individual animals from different soil areas is noted, the largest and heaviest coming from fertile soils, in addition to the larger populations supported by these areas.

Leopold (*Wisconsin Conserv. Bull.*, 8, no. 8, p. 3) concludes that the removal of predatory species may pave the way for serious irruptions of deer populations. Killing of males only rarely checks the increase of polygamous species, and an open season on does may be necessary.

Zoogeography. Mayr (*Quart. Rev. Biol.*, 19, p. 1) discussed Wallace's Line in the light of recent studies. Weber's Line, running between the Moluccas and Celebes, Australia and Timor, represents a better division of the Australian and Oriental faunas.

Behavior. The way the world appears to the

fishes, birds, and mammals, different as it is to our human impressions, is the theme of *The Nature of the Beast* (Doubleday, Doran and Co., 1945) by Ruth Crosby Noble. The reader may, in this popular account, become acquainted with modern experimental investigations of animal behavior.

Echolocation, the finding of one's way by hearing of echoes from solid objects, somewhat on the principle used in radar, Griffin shows is a method used by the bats and by blind men (*Science*, 100, p. 589).

Much new information on the behavior of Rocky Mountain sheep was reported by Spencer (*Jour. Mammal.*, 24, p. 1), based on the study of a Colorado herd. The rams do not assemble a harem but are promiscuous, moving from flock to flock of ewes. Battling does not drive away rivals but establishes a sort of "priority" and social dominance among the rams.

Genetics. Asmundson (*Genetics*, 30, p. 305) found at least ten genetic factors involved in the inheritance of color in turkeys. In the fox, coat color is commonly controlled by two factors, according to Butler (*Genetics*, 30, p. 39); red color is based on the presence of all four dominant genes; smoky red foxes are heterozygous in one set of factors; cross foxes in both.

Anatomy. Hill (*Jour. Mammal.*, 26, p. 153) was fortunate enough to secure a male and female dugong and was able to investigate a number of anatomical features, previously poorly known. The heart is bifid; the brain poorly developed; the uterus is double except for a short body; and there are two caeca. Robertson (*Zoologica*, 29, p. 169) described the anatomy of the forelimb of the woolly monkey, part of a study he is making on this New World monkey.

Embryology. The history of man before birth is one in which people have great interest and yet great ignorance. "Ourselves Unborn" by Corner (*Yale University*, 1944) gives an up-to-date summary of human embryology, excellently illustrated, readable, and understandable.

The length of gestation in weasels and their relatives was discussed by Pearson and Enders (*Jour. Exper. Biol.*, 95, p. 21). In those which carry their young over the winter (badger, weasel, marten, and fisher), the embryos remain in resting condition. Implantation in the spring is thought to be correlated with increasing length of daylight.

Conservation. One of the essential steps in the conservation of wild life has been the setting aside of refuges, areas in which threatened species may reproduce, protected from their most dangerous enemy, man. Gabrielson's *Wildlife Refuges* (The Macmillan Co., 1943) gives a full-length review of these areas in North America and the results attained by them.

Evolution. The speed at which evolution takes place in nature is fully discussed in Simpson's *Tempo and Mode in Evolution* (Columbia Univ. Press, 1945), as is also the genetical adaptational aspects. Paleontology is found to have essential agreement with modern genetics regarding the causes of evolution. *Systematics and the Origin of Species* by Mayr (Columbia Univ. Press, 1942) gives the viewpoint of a zoologist on the causes of evolution. A wealth of examples is drawn from many fields, chiefly ornithology. Modern systematics are correlated with ecological and genetical evidences in an extremely valuable manner.

Recapitulation is discussed by Holmes (*Quart. Rev. Biol.*, 19, p. 319), who suggests possible causes.

Taxonomy. An extremely valuable review of tax-

onomy is given by Simpson (*Bull. Amer. Mus. Nat. Hist.*, 85), together with a new classification of mammals, living and extinct. A set of principles to be used in the naming of higher categories is proposed.

Paleontology. Certain strange, eight-rayed imprints in the sandstone of the Yellowstone Valley, Montana, were reported by Brown and Vokes (*Amer. Jour. Sci.*, 242, p. 656). They seem to have been the marks of ancient cephalopods, resting head-down on the muddy bottom of a shallow sea.

Skulls of mammal-like reptiles have been studied by Olson (*Geol. Soc. America, Spec. Papers*, 55), who considers that three distinct lines developed in the mammalian direction.

Insects. *The Insects of the Pacific World* by C. H. Curran (The Macmillan Co., 1945) presents a review of the insects and spiders occurring on the Pacific Islands, in non-technical language. There are some 50,000 species of insects in this area; this book does not attempt to describe each but instead deals with family groups.

Comstock (*N. Y. Acad. Sci., Scient. Surv. Porto Rico and Virgin Is.*, 12, no. 4, p. 421) describes the swallow-tail butterflies and the skippers on the West Indian islands under American rule. This completes the work on Lepidoptera in this series.

Ewing and Fox (*U. S. Dept. Agric., Misc. Publ.*, 500) give keys to the genera and higher groups of the fleas of North America, descriptions of the various forms, their ranges and hosts.

Protochordata. The American ascidians—distant relatives of the vertebrates that as adults commonly resemble sponges—were reviewed by Van Name (*Bull. Amer. Mus. Nat. Hist.*, 84).

Fishes. Another blind characin fish has been described by Breder (*Zoologica*, 29, p. 131), found in San Luis Potosi, Mexico. The retinal tissue and optic nerve of this cave fish are completely gone, and it is indifferent to light.

The osteology and relationships of *Luvarus*, a rare scombroid fish, are discussed by Gregory and Conrad (*Bull. Amer. Mus. Nat. Hist.*, 81, p. 225). The body of this species is strengthened by dorsal and ventral bony trusses which function like accessory vertebral columns.

Amphibians and Reptiles. Fossil reptiles and amphibians are described in popular, yet accurate style in Colbert's *The Dinosaur Book* (Amer. Mus. Nat. Hist., 1945). Among the more peculiar is the champion "bonehead," an aquatic species with a dense skull ten inches thick above its brain which is hardly larger than a man's thumb.

Reptiles of the Pacific World (The Macmillan Co., 1945) gives an account of the turtles, crocodiles, lizards, snakes, frogs, and toads of the Pacific Islands, by A. Loveridge. Special treatment is given to the poisonous snakes.

Birds. Experimental evidence has recently been reported by Dice (*Amer. Nat.*, 79, p. 385), showing that several common owls see objects in light one-tenth to one-hundredth of that required by man. The diurnal burrowing owl, however, sees poorly in the dark.

Delacour and Mayr (*Wilson Bull.*, 57, p. 4) revised the family Anatidae, the ducks, geese, and swans. The taxonomy, behavior, ecology, variation, and evolutionary significance of the Galapagos finches was reported by Lack (*Occ. Pap. Calif. Acad. Sci.*, 21). These birds, first studied by Darwin, influenced his thinking on evolution.

Mayr (*Bull. Amer. Mus. Nat. Hist.*, 83, p. 123) gave an account of the birds of Timor and Sumba in the Netherlands Indies, including a zoogeographical analysis of the Sunda Islands. A more

general account, by the same author, *Birds of the Southwest Pacific* (The Macmillan Co., 1944) gives brief descriptions of the birds to be encountered between Samoa and the Marianas. A section is devoted to the bird life of the various islands.

The winter home of the chimney swift, long unknown, was discovered when Peruvian Indians killed some swifts wearing leg bands and sent these to the American Embassy at Lima, from whence they were forwarded to the Fish and Wildlife Service (*Auk*, 61, p. 604).

Mammals. Wimsatt (*Jour. Mammal.*, 26, p. 23) gives evidence that in the little brown bat (*Myotis lucifugus*) gestation is only 50 to 60 days. Since this species and many other northern bats breed in the autumn and give birth in the early summer, the period of gestation has been thought much longer than this. In the same periodical (p. 86) Kendeigh gives for the first time the body temperature of several small rodents and shrews. It averaged about 38° C. in deer-mice and chipmunks, and near 36.5° C. in the shrews.

Carter, Hill and Tate in *Mammals of the Pacific World* (The Macmillan Co., 1945) gave a non-technical review of the mammals of this area. Also included are the ways animals reached the islands in spite of sea barriers.

New observations were made on the breeding and life history of the Australian duckbill. Fleay (*Animal Kingdom*, 47, p. 51) reports nest-building and the development of a young platypus.

Kalmbach discovered that an armadillo may float in water by gulping air and inflating its stomach and intestines. For short distances this animal may walk under water (*The Armadillo . . .*, Texas Game, Fish and Oyster Comm., 1944).

Field studies of wolves in Mount McKinley National Park, Alaska, are recorded by Murie (*National Parks of U. S., Fauna Series No. 5*). The wolf family has a definite home range and does not tolerate strange wolves. Even bears are driven from near the den. Little injury was done by wolves to the Dall sheep of the Park and, in spite of heavy predation, great numbers of caribou live in the area. Covering a much wider scope, Young and Goldman, in *The Wolves of North America* (American Wildlife Institute, 1944) give information on

classification and control, as well as life history of these beasts.

Jordan's short *Natural History and Behavior of the Western Chipmunk and Mantled Ground Squirrel* (Oregon State College, 1944) contain many suggestive experiments that may be widely used to test the skills and intelligence of wild animals.

The mammals of South American countries have been inadequately known, but those of Chile are described by Osgood (*Zool. Ser., Field Mus. Nat. Hist.*, 30) in considerable detail. Although a technical paper, it will provide the general reader interested in mammals with much information in this field.

The Mammals of Eastern United States (Comstock Publ. Co., 1943) by W. J. Hamilton, gives short descriptions and life histories of these, valuable to students and laymen alike.

The well-known poisonous effect of polar bear liver, also that of certain seals, is probably due to excessive quantities of vitamin A, according to Rodahl and Moore (*Biochem. Jour.*, 37, p. 166).

In ancient times the bite of a shrew was considered poisonous. Pearson (*Jour. Mammal.*, 23, p. 159) showed that in fact the saliva of the short-tailed shrew, *Blarina*, contains a toxic substance.

Elton in *Voles, mice and lemmings* (Oxford Univ. Press, 1942) gives a summary of all the available information on the plagues of these animals that may do great damage to crops. Cycles of increase and decrease in other animals are also discussed.

Prairies in western Washington are covered with rounded mounds 10 to 40 feet in diameter and up to 7 feet high, causing the prairies to appear from the air as if they had smallpox. Dalquest and Scheffer (*Jour. Geol.*, 50, p. 68) show that these are *Mima* mounds, the work of pocket gophers (*Thomomys*) over long periods of time. Beavers modify the earth's surface in another way, as reported by Ives (*Jour. Geomorph.*, 5, p. 191). The dams these animals construct gradually fill up with silt, forming meadows in the mountain country. In places, as much as one-tenth of the country is flat meadowland built up in this fashion.

JOHN ERIC HILL.
